1740 1745 1746 MSC 90/28/Add.3 ANNEX 4 Page 70 1738 1740 1741 1742 1743 1744 1747 No. (18) Reacts volently with water, evolving hydrogen flooride, a tookic extremely corrects volently with water, evolving hydrogen flooride, a tookic south corrective op as apparent as white furmes, in contact with acids or acid furnes, evolves highly rookic furnes of hornine, floorine and their compounds, evolves highly rookic furnes of hornine, floorine and their compounds. Colourless liquid with a pungent odour, causes tears, in the presence of moisture, corrosive to most metals. Toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes. Colourless liquid with a pungent odour. Causes tears. Immiscible with water. Un hydrolyses slowly in contact with: In the presence of mosture, corrosive to most metals. Toxic if swallowed, by skin contact or mosture, corrosive to most metals. Toxic if swallowed, by skin contact or In contact with acids or acid fumes evolves highly toxic fumes of bromine, fluorine and their compounds. Highly corrosive to most metals. Toxic if swallowed, by skin contact or by inhalation. Gauses burns to skin, eyes and mucous membranes. Colourless liquid with an irritating odour. Reacts with water. When involved in a fire, evolves toxic gases. In the presence of moisture, highly Non-flammable, uncit and corrosive gas, Forms dense white corrosive furness in morst air. Reacts violently with water, evolving hydrogen tchoride, an irritating and corrosive gas apparent as white frames, in the presence of moistone, highly corrosive to most makes, Much heaver than air (2.35). Highly tritating or skin, eyes and mucous membranes. Very dark brown, heavy liquid with an extremely trintating odour. Density, all quier product. Boiling point: 5°C. Powerful oxidaric may cause fine in contact with organic materials such as wood, cotton or straw. Highly consists to most metals. Souldon's base the same properties to a lesser degree, depending on concentration. Toxic if swallowed, by skin contact degree, depending on concentration. Toxic if swallowed, by skin contact Colouries, flammable field with a purgent odour phydrogen Flashpoint: 32°C cc. Reacts volently with water, evolving hydrogen chloride, an irritating and corrosive aga a paparent as white furnes. When the reviewed in a fire, evolves bond gases, in the presence of most sure, highly corrosive to most metals. Appoint irritates mucous membranes. Highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. corrosive to most metals. Causes severe burns to skin, eyes and mucous Highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. Crystalline solids. Decomposed by heat or acid, evolving hydrogen fluoride, an externelly infritating and corrosive gas, in the presence of mosture, corrosive to glass, other siliceous materials and most metals. Cause burns to skin, eyes and mucous membranes. Category D. Potected from sources. Colourless, heavy liquid with an extremely triting ofdour. And the context of heat. Clear of living quarters. Belling point-4CC. Powerfol oxidant may cause fire in context with Segregation as for data S. S. I but or organic material such as wood, cotton or straw Reax is violently with Segregation as for classes 4.1 and 2. water, evolving hydrogen fluoride, a toxic, extremely corrosive gas apparent as white furnes. Colourless, heavy liquid with an extremely irritating odour. Powerful oxidant; may cause fire in contact with organic material such as wood or by inhalation. Causes burns to skin, eyes and mucous membranes. Highly corrosive to most metals. Toxic if swallowed, by skin con inhalation. Causes burns to skin, eyes and mucous membranes. by vapour inhalation. Causes burns to skin, eyes and mucous membranes. Properties and Observations (12) See entry above Category A. Protected from sources of heat. Clear of living quarters. "Separated from" acids. Category D. Keep as cool as reasonably practicable. Clear of living quarters. Segregation as for class 5.1, but "Separated from" classe 4.1, 5.1 and 7. Category D. Protected from sources of heat. Clear of living quarters.
Segregation as for class 5.1 but "Separated from" classes 4.1 and 7. Category A. Protected from sources of heat. Clear of living quarters. "Separated from" acids. Category D. Clear of living quarters. Protected from sources of heat. Category C. Clear of living quarters. Category D. Clear of living quarters. Category D. Keep as dry as reasonably practicable. Clear of living quarters. Stowage and Segregation Category D. Keep as dry as reasonably practicable. Clear of living quarters. .1 to 7.7 (16) Category A. Category A. May cause fine in contact with organic material or ammonium compounds. Selemine decomposition at elevated and a supposition are levated and a supposition are levated of the cut evolution. Discomposition that the composition of the initiated by head or by impurities (e.g. powdered meals (flow, lead in the initiated by head or by impurities (e.g. powdered meals (flow, Liable to heat stowly. Rearts with saids, evolving chlorine, an irritating, corrow and not cas, in the presence of molisture, corrosive to most metals. Dust irritates, metals means means means the most membranes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | See entry above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | well-demmadale, pacte and corrobuse gas. Forms deace, while controlled, futures in most last. Reacts volenthy waster, reolwing bydrigogen fluoride, and ristings and corrobuse gas appears as white futures, Corrobuse to glass and not most in metals, Prowerful coidizing agent which may cause fires with combastile metals. Much heaver than air. Highly irritating to skin, eyes and muccus membranes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Colourless liquid. Corrosive to most metals. Toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes. | Colourless, very deliquescent crystals. Melting point may be as low as 50°C. In the presence of moisture, corrosive to most metals. Toxici if sevellowed, by skin contact or by dust inhalation. Causes burns to skin, eyes and mucous membranes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Contents find with a purpore dour. Reacts violently with water, evolving bytiogen choride, an initiating and corresive gas apparent as a Whete furnes.  When involved in a fire, evolves took gases, in the presence of most                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                         | Orange liquid. Powerful oxidant. May cause fire in contact with organic materials such as wood, cotton or straw. Highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. | See entry above.                                                                                                 |                                     | Green liquid, Reacts with strong acids, evolving hydrogen fluoride, an extremely irritating and corrosive gas. Mildly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. | See entry above.               |
| Stowage and Segregation (16)      | 7.1 to 7.7                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Category D. Protected from sources for heat. Cargo rheat. Cargo rheats of real cargo runis shall be shaded from direct sunlight.  shall be stowed so as to allow for adequate all circulation throughout throughout throughout throughout ammonium compounds, acids, and any admites; hydrogen peroxides and liquid organic substances.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Category D. Protected from sources of heat. Cago transport units shall be shaded from direct suilight.  Ackages in rea goot anasport units shall be stowed so as to allow for the cargo. Separated from the cargo. Separated from ammolulum compounds, acids, and admics Indicates provided said iliquid organic substances.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Category D. Clear of living quarters. | MSC 90.28/Add.3<br>ANNEX 4<br>Page 72 | Properties and Observations | (47) |            | Dark red liquid, Reacts violently with water, evolving hydrogen chloride franchioring, both pulpy irritation and corrostve gases apparent as white funds to Oxidistr, may cause fire in contact with organic materials such as wood, cotton or staw. Highly corrost ve to most metals, in the presence of materials and introcurs from the most metals. Causes severe burns to skin, eyes and microsus membranes. | Causes burns to skin, eyes and mucous membranes. | See entry above.             | See entry above.             | Category B. Clear of living quarters. Causes burns to skin, eyes and mucous membranes. | See entry above.                      | See entry above.                                      | Dark purple liquid with an ammonia-like odour. Corrosive to copper, aluminium, zinc and tin. Toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes. | See entry above.                  | Colourless liquid with a pungent odour. Reacts violently with water, wholing hydrogen chloride, an irritating and corrosive gas apparent as white funes. When involved in a fire, evolves toxic gases. In the presence of moisture, highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. | Colourless liquid with a pungent odour. Reacts violently with water, evening byforger idnorde, an intraining and convisive gas apparent as white forms. When former is evolves toxic gases, in the presented in noisture, they happy correstive to mast metals viapour inflates mucous membranes. | Colourless liquid, Melting point:-4°C. Highly corrosive to most metals, Causes burns to skin, eyes and mucous membranes. | Colourless ilquid with an extremely irritating odour, causing tears. Reacts secure including with a secure and including and controlled with which are corrosive gas apparent as white fumes, in the presence of ritating and corrosive gas apparent as white fumes, in the presence or corrosive to most metals. Causes burns to skin, eyes and mucous membranes. | Colourless liquid with a pungent odour. Reacts violently with water, working yidrogen chloride, an irritating and corrosive gas apparent as white furms. When involved in a fire, evolves toxic gases, in the presence of moisture, highly corrosive to most metals. Irritating to skin, eyes and mucous membranes. |
|                                       | Stowage and Segregation     | (16) | 7.1 to 7.7 | Category C. Clear of living quarters. | MSC 90/28/Add 3<br>ANNEX 4<br>Page 73 | Properties and Observations (17)      |             | Colourless, flammable liquid with a pungent odour. Flashpoint. 25°C.c.c. acts volently what even being hydrogen folded, an intrating and corrosive gas apparent as white fumes. When involved in a fine, evolves to corrosive gas apparent as white fumes. When involved in a fine, evolves to corrosive to gas set, in the greence of moisture, highly corrosive to most metals. Vapour ir thats mucous membranes. | Colourless liquid. In the presence of moisture, highly corrosive to glass, other siliceous materials. Harmful if swallowed. | Colourless liquid with a pumpent odour. Reacts violently with water, working through grid organization and corrosive gas apparent as white filmes. The properties to the gases. In the presence of moisture, and injury corrosive on most metals. Wipour Inflates mucous membranes. | Solid with an irritating odour. Causes tears. Welting point: 45°C. In the presence of moisture, corrosive to most metals. Vapour irritates mucous membranes. | Colourless liquid with a pungent odour. Reacts violently with water, whiching hydrogen chloride, an irritating and corrosive gas apparent as white furnes.  When involved in a fire, evolves toxic gases. In the presence of moisture, highly corrosive to most metals. Causes burns to skin, eyes and mucous methoranes. | Brown solid. In the presence of moisture, highly corrosive to most metals. The provisions of this Code should not apply to the solid hydrated form. | Usually, diluted sulphuric acid in small glass receptacles. | Colourless, clear liquid. Corrosive to most metals. May cause severe burns to skin, eyes and mucous membranes if containing free hydrofluoric acid. | Colourless liquid, in the presence of moisture, highly corrosive to glass, other siliceous materials and most metals. Causes burns to skin, eyes and mucous membranes. | Choiches flied up that a purgen colories flexible and extremely flexible solutions and the flower of the choiches and the flied on the choiches and any and a soften further and consistence of motisture, highly consistence of motisture, highly consistence of motisture, highly consistence of motisture, highly consistence of motisture, and the choices severe burns to skin, eyes and mucous membranes. | Colourless liquid. Highly corrosive to most metals. May cause severe burns to skin, eyes and mucous membranes if containing free hydrofluoric acid. | Colourless flammable liquid with a pungent odour. Pure FORMIC ACID: flashpoint 42°C c.c. Corrosive to most metals. Causes burns to skin, eyes and mucous membranes. | Yellow liquid. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. In the presence of mucosure injuly corrosive to most metals. Causes burns to skin, eyes and mucosu membranes. | Colourles I liquid with a pungent odour. Reacts violently with water, working byforgeger chordre, an initiating and corresive gas apparent as white furnes, white furnes, the presence of moisture, which models ha fire, evolves toxic gases. In the presence of moisture, highly corrosive to most metals. Apour initiates mucus membranes. | Colourless liquid. In the presence of moisture, highly corrosive to glass, other siliceous materials and most metals. Causes burns to skin, eyes and mucous membranes. Harmful if swallowed. |

Misture consists of between 70% and 80% by mass of acids and contains not less than 25% by between 70% and 80% by mass of acids and contains not less than 25% by the paper acid Reads value with with 40% by the paper so it is provided by the paper so it is provided by the paper so that the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the paper so it is provided by the Colourless liquid. An aqueous solution of the gas hydrogen iodide. Highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. Colourless liquid with an irritating odour. Highly corrosive to glass, other silteous materials and most metals. Toxic if swallowed, by skin contact or by inhalation. Both the liquid and its fumes cause severe burns to skin, eyes and mucous membranes. Red brown or black crystals. Reacts violently with water, evolving irritating and cornsisting eases apparent as white fumer. Powerful oxidant, may cause fire in contact with organic materials such as wood, cotton or straw, in the presence of mosture, highly cornosive to most metals. Vapour firtuses mucoss membranes. When involved in a fire, evolves toxic gases. In the presence of moisture, highly corrose to most metals. Causes burns to skin, eyes and mucous membranes. Colourless liquid. An aqueous solution of the gas hydrogen bromide. Highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. Colourless liquid. An aqueous solution of the gas hydrogen chloride. Highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. Liquid with chlorine odour. In contact with acids, evolves very irritating and corrosive gases. Mildly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. Colouriess liquid with a pungent odour. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. Properties and Observations (17) Colourles s liquid. Causes burns to skin, See entry above See entry above See entry above See entry above. See entry above. See entry above. Category D. Clear of living quarters. Category C. Clear of living quarters. |                                    | Properties and Observations (17) |          | Oily liquid, Mildly corrosive to most metals. | May be dry solid or slurry. Corrosive to most metals. Harmful if swallowed. 1799 | Mixture of concentrated nitric and sulphuric acids. Oxidant, may cause fire in contact with organic materials such as wood, cotton or straw, developing highly rouge as frown filmes. J. Highly corosive to most metals, clauses severe burns to skin, eyes and mucous membranes. | See entry above.                                               | Vellow liquid; a mixture of nitric acid and hydrochloric acid, usually in the<br>propertion of 13. Spowedi Loxidami, may assare fire nomate with organic<br>materials such as wood, cotton or straw, evolving sufficiating and highly,<br>considerable to the control of the metals. Causes severe burns to skin,<br>eyes and mixtous membranes. | Controllers liquid with a purgent odour. Reacts violently with water, evolung highest horizont and notices a ministring and corrosive gas apparent a Whele investigated notice, as irritating and corrosive gas apparent as When involved in a fire, evolves toxic gases, in the presence of moisture, which corrosive to most metals, Causes burns to skin, eyes and mucous metalates. | Colourless liquid with a pungent odour. Reacts violently with water, when prydrogen chordie, an infatting and corrosive gas apparent as white furnes. When invoked in a fire, evolves toxic gases. In the presence of moisture highly corrosive to most metals. Yapour infrase mucous membranes. | Colourless liquid with a pungent odour. Reacts violently with water, with which purposes therefore, an irritating and conceive gas apparent as white furmes. In the worked in a fine, evolves toxic gases, in the presence of moisture, in lightly corrosive to most metals. Vapour irritates mucous membranes. | Colourless liquid. Oxidant. Highly corrosive to most metals. | Yellow, oily liquid. Corrosive to most metals. | Colourless I liquid with a pungent odour. Reacts violently with water, with whytely infracting and corrosive gas apparent as white furmes. White furmes are not expected to the presence of moisture, in the presence of moisture, in lightly corrosive to most metals. Vapour irritates mucous membranes. | Miscible in water. Mildly corrosive to most metals. | Colourless, crystalline powder. Reacts violently with water, evolving fly and proper clother as in ritiating and corrosive as apparent as white fumes. Powerful oxidant; may cause fire in contact with organic materials as a wood, council or straw, in the presence of moisture, highly corrosive to most metals. | Crystalline powder, very deliguescent. Reacts violently with water and |

Causes burns to skin, eyes and mucous membranes. Colourless liquid with a pungent other, Reacts violently with water, evolving bydrogen chloride, an irritating and corrosive gas apparent white furnes, in the presence of mosture, highly corrosive to most metals, exact burns os there, regeared most metals, exactly conserved to the presence of most most metals, and there are burns of such expert and muscus mentioners. Highly toxic if swallowed, by skin contact or by inhalation. fumes. In the presence of moisture, highly corrosive to glass, other siliceous materials and most metals. Toxic if swallowed, by skin contact or White, deliquescent crystals or powder. Decomposed by acids, evolving hydrogen fluoride, irritating and corrosive gas. Toxic if swallowed, by skin Colourless liquid. Flashpoint: 12°C c.c. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas, apparent as white times. In the presence of moisture, highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. Colourless liquid with a pungent odour. Reacts violently with water, evolving lydrogen chloride, an infitating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Vapour fridates muctous membranes. white fumes. In the presence of moisture, highly corrosive to most metals. Highly toxic if swallowed, by skin contact or by inhalation. Causes burns Colouriess, flammable liquid, with a purgent odour. Talspoint: 38°C Co. Reacts volently with water, evolving pydrogen thorough and and corrotive ags apparant as white fumes. When the colouries are trittains and corrotive ags apparant as white fumes, when the colouries are the colouries and agreement and are corrosive to most metals. Yapour irritates mucous membranes. White crystalline solid. Decomposed by heat or acids, evolving hydrogen fluoride, a toxic, extremely irritating and corrosive gas apparent as white Colouriess, extremely mobile liquid with a suffocating odour.
Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. and corrosive gas apparent as Colourles s liquid. Reacts with ammonium salts, evolving ammonia gas. Corrosive to aluminium, zinc and tin. Causes burns to skin, eyes and mucous membranes. Reacts violently with acids. White pellets, flakes, lumps or solid blocks, deliquescent. Reacts with ammonium salts, evolving ammonia gas. In the presence of moisture, corrosive to aluminium, zinc and tin. Causes burns to skin, eyes and Colourless liquid. Reacts with ammonium salts, evolving ammonia gas Corrosive to aluminium, zinc and tin. Causes burns to skin, eyes and White pellets, flakes, lumps or solid blocks, deliquescent. Reacts with ammonium salts, evolving ammonia ags. In the presence of moisture, corrosive to aluminium, zinc and tin. Causes burns to skin, eyes and mucous membranes. Reacts violently with acids. an irritating and corrosive gas apparent Colourless liquid with a pungent odour. Reacts violently with water, Colourless liquid with a pungent odour. Reacts violently with water, by inhalation. Causes burns to skin, eyes and mucous membranes. Properties and Observations mucous membranes. Reacts violently with acids. mucous membranes. Reacts violently with acids. (12) contact or by inhalation. See entry above See entry above Category D. Clear of living quarters. Category C. Clear of living quarters. quarters. Category A. | MSC 90/28/Add.3<br>ANNEX 4<br>Page 78 | Properties and Observations | (11)                  | Yeltow or red liquid. Boiling point: 79°C. Reacts violently with water, evolving hydrogen choride and suphur doxide, irritating and corrosive gases. In the presence of moisture, highly corrosive to most metals. Causes severe burns to skin, eyes and mucous membranes. | Colourless liquid with a pungent odour. Reacts violently with water, evolving hydrogen ribriotie, an irritating and corrosive gas apparent as white furnes. In the presence of moisture, highly corrosive to most metals. Vapour irritates mucous membanes. |                                       | Colourless, deliquescent crystals. Melting point of the pure substance: 58°C. In the presence of moisture, corrosive to most metals. Causes burns to skin, eyes and mucous membranes. | Colourless Ilquid. Mildly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. | White crystalline solid. Soluble in water. When heated, decomposes into ammonia and acetaldehyde. | vs. support comparison and burnhout copyer. When intoled in a fiftee certex tools future, forms entruely seathle explores compounds with lead, sliver or other heavy meals, and their compounds. Tools if swallowed, by skin contact or by inhalation. | Non-flammable gas in a white solid form. Slowly evolves vapours which are heavier than air (1.5). Inhalation of vapours may lead to unconsciousness. Can cause severe burns when in contact with the skin. | Colouries, volatile liquid with a heavy anaesthetic vapour. Non-<br>flammable: when involved in a fire, evolves extremely toxic fumes<br>(phosgene). Toxic if swallowed, by skin contact or by inhalation. |                                                                                   | Colouriess liquid with a pungent odour. Miscible with water. Corrosive to lead and most other metals. Burns skin. Vapours irritate mucous membranes. | Yellow-pink or white deliquescent crystals, flakes or lumps. Melting pornt: 50C : Jobble in water, keacts violently with acids, evolving hydrogen sulpide, a toxic and filammable gas. Mildly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. | Toxic if swallowed, by skin contact or by inhalation. | See епту above.                                        | Liable to ignite spontaneously in air. If shaken, may produce sparks. In contact with water, evolve hydrogen, a flammable gas. |

|                                       | Properties and Observations (17) |           | Liable to ignite spontaneously in air. If shaken, may produce sparks. In contact with water, evolve hydrogen, a flammable gas. | Liable to ignite spontaneously in air according to oil content. | Liable to ignite spontaneously in air according to moisture content. | Non-flammable gas. Much heavier than air (5.2).    | Non-flammable, toxic and corrosive gas with a pungent odour. Corrosive to metals. In moist air produces hydrogen fluoride. Much heavier than air (3:6). Highly irritating to skin, eyes and mucous membranes. | Flammable gas. Explosive limits: 2.9% to 29%. Heavier than air (1.6). | Colouriess liquid with a pungent odour. Flashpoint: 2°C c.c. Immiscible with water. | Boiling range: - 14°C upwards, Immiscible with water. | Immiscible with water.             | See entry above.                   | White to straw-coloured liquid with an ether-like odour. Flashpoint: 20°C c.c. Explosive limits: 2% to 100%, inmiscible with water. Oxidizing material. May explode on heating. Harmful if swallowed or by inhalation. | Miscibility with water depends upon the composition. | See entry above.              | See entry above.              | Colourless crystals. Slightly soluble in water. Vapours may form explosive mixture in air. Forms explosive and extremely sensitive mixtures with coidizing substances. Toxic if swallowed, by skin contact or by dust inhalation. | Silvery white metal. Burns with an intense white light and heat, in contact with water, especially sewarter, may evolve bydogene, at filmmable gas, Rearts reading with acids and causif calkali, evolving hydrogen. Rearts readily with iron oxide, producing a thermite effect. Forms explosive |

| MSC 90/28/Add.3<br>ANNEX 4<br>Page 80 | Properties and Observations | (71) |         | White, crystalline powder, in contact with water, acids or moisture evolves hydrogen, which may be ignited by the heat of the reaction. | Dark grey powder or crystals. | Brown powder or crystals. Insoluble in water. Harmful if swallowed. | choice is liquid, Mictures with combustible material may ignite<br>spontaneously and, when Involved in a fire, by short or by friction, may<br>access an expolency. He may be supported to the support of the Highly corrosive to most metals. Causes burns to skin, eyes and mucous<br>materians. Transport of FRECHORICACIO with more eyes and mucous<br>than 72% acid, by mass is prohibited. | White solid. Evolves heat in contact with water. Toxic if swallowed, by skin contact or by dust inhalation. | White, crystalline solid. Toxic if swallowed, by skin contact or by inhalation. | Colourless liquid evolving vapour which is irritating to eyes and skin ("Tear Gas"). Toxic if swallowed, by skin contact or by inhalation. | Clear, colourless, volatile liquid with a chloroform-like odour. Immiscible with water. When involved in a fire, evolves extremely toxic fumes (phosgene). Toxic if swallowed, by skin contact or by inhalation. | Colourles s, volatile ilquid. Boiling point. 61°C. Non-flammable. When involved in a fire, evolves extremely roxic fumes (phosgene). Toxic if swallowed, by skin contact or by inhalation. Anaesthetic. | Coultres repeate ecologie and course and course set that the course set that the course and course set that the course course set that the course and the course and hydrogen from the course and hydrogen course can did not counted which are highly work. | MSC 90                                | Properties and Observations | (4)                    | Colouriess liquid. Reacts violently with water, evolving hydrogen lodide, an intribating and corrosive gas apparent as white times, in the presence of measure, highly corrosive to most meals. Vapour inflates mucous membranes. | Oily liquid. Mildly corrosive to most metals. | A wide variety of corrosive liquids. Causes burns to skin, eyes and mucous membranes. | See entry above.                               | See entry above.                               | White, very deliquescent crystalline solid, Melting point: 50°C. Soluble in Reacts violently with organic materials such as wood, cotton or straw. In the presence of institute, crorost to most metals. Causes severe burns to skin, eyes and metous membranes. | Waste or spent sulphuric acid, usually a by-product of refining petroleum oils or crude benzenes. Highly corrosive to most metals. | Deliquescent, granulated, mixture of sodium hydroxide and calcium Readsordee. Reads violently with acids. Reacts with ammonium salts, evolving momenta short properties of the presence of noisture, corrective to aluminum, zinc and in Causes burns to skin, eyes and mixcus membranes. |                                                                                                     | See entry above.                                                                                          | Not subject to the provisions of this Code but may be subject to provisions governing the transport of dangerous goods by other modes. | Liquefled, flammable, toxic, colourless gas with an unpleasant odour.<br>Spotsive limits: OSA, to 88b, Light, May decompose above-18C with the formation of hydrogen and bovon hydrides.<br>To supplind the formation of hydrogen and bovon hydrides was the formation of hydrogen and bovon hydrides.<br>water by hydrolysis within the lungs. | Solution of the flammable gas methyl chloride, UN No. 1063, in the liquid methylene chloride. | Liquefied, inert gas. Lighter than air (0.7). | Colourless liquids. Flashpoint: 32°C c.c. immiscible with water. |

| MSC 90/28/Add.3<br>ANNEX 4<br>Page 82 | Properties and Observations (17)    |             | Colourless liquid. Flashpoint: 38°C to 44°C c.c. Explosive limits: 1.1% to 9.4%. Immiscible with water. | Colourless flammable liquid. Flashpoint: 55°C.c.: immiscible with water, but reacts with it, forming corrosive and toxic fumes. Toxic if swallowed, by skin contact or by inhalation. | Colouriess liquid with a pungent odour. Flashpoint: 16°C c.c. Explosive limits: 1.8% to 14%. Immiscible with water. Irritating to skin, eyes and mucous membranes. | Colouriess liquid with a chloroform-like odour. Flashpoint: 31°C c.c.<br>Explosive limits: 0.9% to 6.5%. Immiscible with water. | Colourles s, volatile liquid with a pungent odour. Hashpoint. – 3°C c.c.<br>Explosive linits: 1.2% to 25%, immiscible with water. Harmful by<br>inhalation, irritating to skin, eyes and mucous membranes. | Colourless liquids. Explosive limits: 0.8% to 2.9% normal-NONANE:<br>flashpoint 31°C.cc., Immiscible with water. Irritating to skin, eyes and<br>mucous membranes. | Colourless liquid with an ammoniacal odour. Flashpoint: -4°C o.c. Miscible with water. Toxic if swallowed, by skin contact or by inhalation. Causes burns to skin and eyes. | Colourless to pale yellow liquid with an ammoniacal odour. Reacts violently with acids. Flashpoint: 3°C.c.c. Miscible with water. Harmful by inhalation. Causes burns to skin, eyes and mucous membranes. | Liable to heat and ignite spontaneously in air and to evolve sulphur dioxide, an irritating gas. | Colourless, yellowish liquid. Decomposes violently in contact with water. Spillage will ignite spontaneously. | Liable to heat and ignite spontaneously in air and to evolve sulphur dioxide, an irritating gas. | White, amorphous solid material. Soluble in water. Liable to heat on contact with moisture and heating results in evolution of sulphur dioxide, an annact with moisturing gas. Also evolves sulphur dioxide on contact with acids. | Particle size larger than 840 microns. Readily flammable; may ignite spontaneously in air. In contact with water, may evolve hydrogen, a flammable gas. | Liquid evolving toxic vapour. Reacts with acids or acid fumes, evolving hydrogen cyanide, a highly toxic and flammable gas. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                                                                   |

| MSC 90/28/Add.3<br>ANNEX 4<br>Page 83 | Properties and Observations (17) |         | See entry above.                                                             | Cornosive to most metals. Harmful if swallowed. Causes burns to eyes and skin. | See entry above.                                      | Colourless crystals. Melting point: SGC. Reacts violently with water,<br>world by drogen brondie, a tox can corresive age apparent as white<br>furnes. Reack violently with ogain c materials (such as wood, cotton,<br>the Composite of the Composes with heated, evolution to not and<br>corrosive gaes. When Involved in a fire, evolves toxic and corrosive gaes. In the presence of mostivue, highly corrosive to most metals. Causes<br>burns to skin, eyes and mucous membranes. | Colourless liquid with a strong, very unpleasant odour. Corrosive to most metals. Harmful if swallowed. | Colouriess, heavy liquid. Boiling point. 24°C. Immiscible with water. When involved in a fire, may evolve toxic furnes. Toxicif swallowed. by skin contact or by inhalation. Irritating to skin, eyes and mucous membranes. | Crystals, granules or prils. Soluble in water. Supporter of combustion. A major freaband a ship carrying its substance may invoke a risk of explosion in the event of contamination 6.4. by free loll or strong the contamination 6.4. by free loll or strong solutions of the contamination 6.4. by free loll or strong gases which support combustion. The act from 6.4 decembers of the composition if many or support combustion. Transport of AMMONIAN INTATE lable to self heating sufficient to initiate decomposition is prohibited.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Intended to be ignited on a specially prepared surface. | Ignite by friction; a prepared surface may be required. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Liquefied, inert gas . Clear of living quarters. Flammable, odourless gas. Much lighter than air (0.14). | Liquefied, non-flammable gas with a chloroform-like odour. Much heavier than air (5.9). Boiling point: 4°C. | Category E. Clear of living quarters. Flammable gas. Explosive limits: 2.3% to 2.5%. Much heavier than air (2.2). | Category D. Clear of living quarters. Liquefled, flammable gas with a faint odour. Explosive limits: 3% to 16%.<br>Slightly heavier than air (1.03). | Category E. Clear of lung quarters. Flammable gas. Explosive limits: 3% to 3-4%. Slightly lighter than air (0.3-6), | Liquefied, inert gas. Much lighter than air (0.14). | Flammable hydrocarbon gas mixture obtained from natural gas or by distillation of mineral oils or coal, etc. May contain propane, cyclopropane, propylene, butane, butylene, etc., in varying proportions. Heavier than air. | Liquefied flammable hydrocarbon gas obtained from natural gas or by distillation of mineral oils or coal, etc. May contain propane, cyclopropane, propyiene, butane, butylene, etc., in varying proportions. Heavier than air. | Liquefred, flammable, odourless gas. Explosive limits: 4% to 75%. Much lighter than air (0.07). | Toxic mixtures of insecticides with liquefied gases. These mixtures may be flammable. | Non-flammable and non-toxic mixtures of insecticides with liquefied gases. | Category E. Clear of living quarters. Flammable hydrocarbon. Heavier than air. | Liquefied, inert gas. Much heavier than air (2.9). |

| MSC 90/28/Add 3<br>ANNIEX 4<br>Page 87 | Properties and Observations (17) |            | Yellow to dark red, volatile flammable liquid, Flashpoint-15°C c.c.<br>Explosky elimits. 3.7% to 12.5%. May react with water or steam, evolving<br>carbon monoxide, which is a toxic gas. Highly toxic if swallowed, by skin<br>corract or by inhalation. | Mobile liquids prepared by mixing asphalt with petroleum distillate.<br>Pungent odour, immiscible with water. | See entry above.                                             | ignites readily. When involved in a fire, evolves toxic fumes; in enclosed cargo spaces, these fumes may form an explosive mixture with air. | Brown, amorphous powder, Insoluble in water. Readily combustible. | ignites readily. When involved in a fire, evolves toxic fumes; in enclosed cargo spaces, these fumes may form an explosive mixture with air. | White powder. Ignites spontaneously in air. Reacts violently in contact with water. |                                                        | Amorphous powder. Liable to ignite spontaneously in air. Forms explosive mixtures with oxidizing substances. | See entry above.           | See entry above.           | Hard, silvery metal, liable to ignite sportaneously in air. | White crystals. In contact with water, acids or moisture, evolves hydrogen, which may be ignited by the heat of the reaction. | Solid. Reacts with acids or decomposes slowly in contact with water or damp air, evolving phosphine, a spontaneously flammable and highly toxic gas. Reacts violently with oxidizing substances. Toxic if swallowed, by skin contact or by inhalation. | Solid. Reacts with acids or decomposes slowly in contact with water or damp air, evolving phosphine, a spontaneously flammable and highly toxic gas. Reacts violently with oxidizing substances. Toxic if swallowed, by skin contact or by inhalation. | Solid. Reacts with acids or decomposes slowly in contact with water or damp air, evolving posphine, a spontaneously flammable and highly toxic gas. Reacts volently with oxidizing substances. Toxic if swallowed, by skin contact or by inhalation. |
|                                        | Stowage and Segregation (16)     | 7.1 to 7.7 | Category D. Clear of living quarters.                                                                                                                                                                                                                     | Category B.                                                                                                   | Саtegory A.                                                  | Category A.                                                                                                                                  | Category A.                                                       | Category D.                                                                                                                                  | Category C.                                                                         | Саtедолу С.                                            | Category D.                                                                                                  | Category D.                | Category D.                | Category D.                                                 | Category E. | MSC 90/28/add.3<br>ANNEX 4<br>Page 88 | Properties and Observations (17) |                | Colouries I lquid. Slowly decomposes, evolving oxygen; the rate of the composition in the context and many that meals, scored alumnium. In contact with combustible material may clause file or explosion. Causes and mucos many states file or explosion. Causes solutions may evolve oxygen. | confine stillaged stood decomposition and an end of decomposition increase in contact with meast, everget aluminium forecomposition increase in contact with meast, everget aluminium forecomposes superable in contact with permagnaties. When innoved in a fire, instructive with combissible material may be explosive. Causes burst sold on the decomposition and every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every every ev | Contents may evolve toxic fumes or vapour. Gases evolved are toxic by skin contact or by inhalation. | Contents may evolve irritant gas or vapour with lachrymatory effects.                         | Crystalline solid. Melting point of pure para-chloroaniline: 70°C approximately. Toxic if swallowed, by skin contact or by dust inhalation. | Colourless liquid. May be a mixture of two of the isomers (e.g. ortho-and meta-) of chloroaniline. Reacts with acids. Toxic if swallowed, by skin contact or by inhalation. | A wide range of toxic solids. Toxic if swallowed, by skin contact or by dust inhalation. | A wide range of toxic liquids. Toxic if swallowed, by skin contact or by inhalation. | Colouriess to brownish—yellow Ilquid mixture with a phenolic odour.  Cause likely with weather 7 coief if yealboach Display included or Dy Inhalation.  Causes burns to skin, eyes and microus membranes. Cresylic actio is a mixture of oreside and higher ability of the result of the structure of oreside and higher advigatory. In awaying proportions, it generally contains more than 3% phenolic compounds. | Colourless flammable liquid with a chloroform-like odour.<br>Flashpoint: approximately 32°C c.c. Toxic if swallowed, by skin contact or<br>by inhalation. | Toxic if swallowed, by skin contact or by inhalation. | See entry above.                                      | See entry above.                                      | Toxic if swallowed, by skin contact or by dust inhalation. | See entry above.                     |

| MSC 99/28/Add 3<br>ANNIX 4<br>Page 89 | Properties and Observations (17) |                | See епту above.                       | Usually white crystals or powder. Toxic if swallowed, by skin contact or by dust inhalation. | See entry above.                     | See entry above.                     | Greyish-white powder. Soluble in water. Reacts with oxidizing substances, evolving heat. Toxic if swallowed, by skin contact or by dust inhalation. | Corrosive content evolves dense smoke when in contact with air. Corrosive content may cause acid burns to skin. | Colouriess, flammable liquid with an ammoniacal odour. Reacts violently what deds, fishpoint 22 C.C. Miscible with water, Highly reactive reducing agent, lgnites spontaneously when in contact with porous materials such as earth, wood or cloth. Toxic if stabilidated, by stabilidated, by the fination or by inhalation. Causes severe burns to skin, eyes and mucous membranes. | Colourless liquid. Powerful reducing agent, burns readily. Toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes. Reacts violently with acids. | See entry above.                                                        | See entry above.                                                       | Colourless liquid. Powerful oxidant: may cause fire in contact with organic materials us that as wood, coton or straw, evolving highly toxic gases (proven firmes). Highly corresive to most metals. Causes severe burns to skin, eyes and muxous membranes. | Colourless liquid. Oxidant; may cause fire in contact with organic materials such as wood, cotton or straw, evolving highly toxic gases (Hown furnes). Highly corrosive to most metals. Causes severe burns to skin, eyes and mucous membranes. | Colourless liquid. Oxidant; may cause fire in contact with organic materials such as wood, cotton or straw, evolving highly toxic. | Brown liquid, Powerful oxidant; may cause fire in contact with organic materials such as wood, cotton or Starw. Highly corrosive to most metals. Toxic if swallowed, by skin contact or bry appour inhalation. Causes severe burns to skin, eyes and mucous membranes. | Deliques cent crystalline solid. Reacts violently with water, generating heat. Reacts with ammonima stils, evolving ammonia gas. Reacts violently with acids. In the presence of moisture, corrosive to aluminium, zinc and tin. Causes burns to skin, eyes and mucous membranes. |

| Dronoifice and Observations | Properties and Coservations (17) |           | Colourless to light yellow liquids. Miscible with water. Melting point of meta-CRESOL. 12°C. Toxic if swallowed, by skin contact or by inhalation. Cause burns to skin, eyes and mucous membranes. | White crystals. Toxic if swallowed, by skin contact or by inhalation. | Colouriess to pale yellow liquid with a pungent odour, immiscible with water but reacts with it to form carbon dioxide. Melting point: 20°C (pure skin, eyes and muscos menthane). | Yellow hygoscopic liquid with anmonitaci lodou. Soluble in water.  Yellow playd kallene, controvide, Carl for me splosve micros with mitric acid.  Reacts with oxidizing substances. Corrosive to copper and its alloys.  Rests violently with acids. Liquid and vapour can cause sewere damage to skin and eyes. | Transport is prohibited.                    | Non-flammable, liquefied gas, colourless and odourless. Heavier than air (1.5). Cannot remain in the liquid state above 31°C. | Flammable, toxic, colourless gas with a garlic odour. Explosive limits: 3.9% to 77.8%. Much heavier than air (2.8). | Flammable, toxic and corrosive gas. Reacts with water, evolving hydrogen chloride. Highly irritating to skin, eyes and mucous membranes. | Non-flammable, toxic and corrosive, colourless gas with a foul odour.<br>Toxicon oxiding agent. React is showly with water or mosts at it to produce<br>policionous and corrosive fumes. Corrosive to glass and to most metals,<br>where than an (1.9). Highly irritating to skin, eyes and mucous<br>membranes. |                         | Flammable, toxic, colourless gas with a pungent odour. Much heavier than air (2.6). | Non-flammable, colourless and odourless gas. Much heavier than air<br>(4.8). Cannot remain in liquid state above 24.3°C. | Colourless, toxic and corrosive gas. Corrosive to glass and to most metals. Heavier than air. Highly irritating to skin, eyes and mucous membranes. | Non-flammable, toxic and corrosive colourless gas with an unpleasant odour. Decomposes in water, evolving highly toxic and corrosive furnes. Corrosive of gasts and for most metals. Wuch heavier than air (7.2). Highly irritating to skin, eyes and microus membranes. | Non-flammable, toxic and corrosive, colourless gas, or yellow liquid. Decomposes in water or mosts air, evolving flight locks and corrosive flumes. Corrosive to glass and to most metals. Much heavier than air (10.3), Builing point: 19.5°C. Highly irritating to skin, eyes and mucous membranes. | The state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the s |

| MSC 90/28/Add 3<br>ANNRX 4<br>Pags 93 | Properties and Observations | (17) |            | Non-flammable, toxic and corrosive gas with an irritating odour. Reacts with water or moist air to produce toxic and corrosive fumes. Corrosive to glass and to most metal six Much heavier than air (4.3), Highly irritating to skin, eyes and mucous membranes. | Category D. Clear of living quarters. Flammable, toxic_colourless gas with a garific obour lightes spreamenably in air. Heavier than air (1.2), irritating to skin, eyes and micross mentitating. | Category & Clear of living quarters. Liquefled, flammable, colourless gas, Explosive limits: 17% to 12% Heagory & Clear of living quarters. Heavy extensively colour, 54°C, irritating to skin, eyes and micros mentle ares. | Category D. Clear of living quarters. Liquefred, non-flammable, colourless gas with a slightly sweet oddour. Strong oxidizing agent. Heavier than air (1.5). Cannot remain in liquid state above $36.5\mathrm{C}_{\odot}$ | Category D. Clear of living quarters. Flammable, toxic, colourless gas with a disagreeable ordour. Much heavier than air (2.8), Highly irritating to skin, eyes and mucous membranes. | Flammable, colourless gas with a foul odour. Explosive limits: 1% to 100%, ignites spontaneously in air. Strong reducing agent which reacts violently with oxidizing substances. Heavier than air (1.1). | Category D. Clear of living quarters. Flammable, toxic, colouriess gas with a foul odour. Much heavier than air $(2.1)$ . | Colouriess, adouriess oil. Decomposes above 93°C, evolving hydrogen cyanide, a highly toxic and flammable gas. Toxic if swallowed, by skin contact or by inhalation. | Liquids with a purgent odour. Immiscible with water but react with it to inform carbon diolect. Tract It swallowed, by Min meater of thy imhalton. If furder deck, with mechanical ventilation, is stair changes per hour. Indicate the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the | See entry above.                                                              | White or yellowish solid (powder, granules or tablets) with chlorine-like anomore. Solide in west. May cause fine in contact with organic material or ammonium compounds.  Stakentes are listed to exordenmic decemposition at elevated stemperatures. This condition may lead to lite or explosion. Decemposition can perfect the condition may lead to lite or explosion. Decemposition managenese, coalt, magnesium, and their compounds).  Reads with adds, evolving chlorine, an irritating, corrosive and toxic gas. In the presence of mosts turned and most consolvent or most metals. Dust irritates and muscon menhanes. | Colourless, clear liquid, with a suffocating pungent odour. Usually stabilized with methyl alcohol. Miscible with water. Causes burns to skin, eyes and mucous membranes. | Category A. Segregation from Yellow powder, liable to heat and to ignite spontaneously in air. May foodstuffs as in 7.3.4.2.2, 7.6.31.1.2 evolve toxic, rifitating or flammable forms when wet, when involved in a 07.7.33.7. |

| MSC 90/28/Add.3<br>ANNEX 4             |         | Properties and Coservations (17) |            | A moulding material in bad or granular form constitute predominantly of<br>postsystem, polytechyl methodsystem or other topolaries marcial and<br>containing 5% to 8% of a voilable hydrocarbon which is predominantly<br>pentaine. During stonge a small proportion of this pentaine is released to<br>the atmosphere; this proportion increases at elevated temperatures.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Mineral filters of varying length. Non-combastible, inhalation of the doxt doxt and in filters. Along a filters that of directs have a filter for the cape filters are have a filter for the cape filters are a filters to the cape filters are a filter for the cape filters are a filter for the cape filters are a filter for the cape filters are a filter filters and the cape filters are a filter filters are a filter filters are a filter filters and the obtained as the cape filters are a filter filters and the obtained as the cape filters are a filter filters and the obtained as the cape filters are a filter filters and the obtained as a filter filter filters are a filter filters and contained and year filters are filters and contained and year filters are a filters and contained and protective contained and year filters and contained and protective filters and cauginement, including proper respiratory apparatus and protective for filters and equipment, including proper respiratory apparatus and protective should be carried out at the dichage port, at magnetic should be formed and at the dichage port, at magnetic should be remoted out at sa, the safety procedures followed and standard of a some a pagine or an abundle of filters and should be remoted for a set a sability of filters as the angent and and a forth and a protective filters as the cape as a set a submitted for the angent of the angent of the problems and access to those species though per problems. | White powder with a pungent odour. Evolves formaldehyde, particularly when heated, which is irritating to eyes and mucous membranes. | White powder or flakes and lumps containing a high proportion of dust.<br>Meline point: 31 °C. The vapour of the molten substance has a flashpoint of 122°C.c. and forms a flammable atmosphere with explosive limits of 1.7% to 10.4%. Causes burns to skin, eyes and mucons. In which are some substance can cause severe skin burns. | White powder, needles, flakes, pellets, rods, briquettes, lumps or fused mass. Melting point: about 53°C. Fumes and dust are irritating to skin, eyes and mucous membranes. Inhalation can cause respiratory trouble. |                                                                                                                        | Brown to greenish-brown product obtained through heating and drying of oily fish. Strong odour which may affect other cargo, Liable to heat spontaneously unless of fow fat content or effectively anti-oxidant treated. | Residue remaining after oil has been extracted by a solvent process from tool bearing seeds for electrations and maintailed of entitizer. The most common seed cakes inclue those derived from occorni (copya) participates of the control of the control of copya and the control of copya and the control of copya and surfavorer seed and they have singled the form of cake, a peliets, and etc. May self—heat slowly if west and sprite sportaneously, before shomed etc. May self—heat slowly if west and sprite sportaneously, before shomed, this capo in the copya of the characters for self-or self |

| MSC 90/28/Add 3<br>ANNIX 4<br>Page 95 | Properties and Observations (17) |             | Colouries, flammable liquid with an acrid odour. Metting point: 13°C. Alzabour. 54°C. od Mischlew With water May polynerize vollently, which may cause fire and explosion unters properly stabilized. Harmful if mandowd or by inhalation. Corrosive to skin, eyes and mucous mentiones. | Colourless liquid. Flashpoint: 48°C c.c. Miscible with water. Harmful by inhalation. Irritating to skin, eyes and mucous membranes. | Colourless to yellow liquid. Flashpoint: 41°C c.c.<br>Explosive limits: 0.3% to 6.3%. Immiscible with water. Irritating to skin, eyes and mucous membranes. | . Colourless liquid with an odour similar to oil of bitter almonds. Reacts with acids, evolving hydrogen cyanide, a highly toxic and flammable gas. Toxic if swallowed, by skin contact or by inhalation. | . Colourless to slightly yellow liquid with a pungent odour. Melting point: 12°C. Immscible with water. Decomposes slowly in water. Harmful if swallowed or by skin contact. Highly irritating to skin, eyes and mucous membranes. | Colouries to slightly yellow or brown fuming liquid. Reacts with water, evolving hydroger cholorie, an imriting and corrosive uss apparent as while funes, in the presence of moisture, corrosive to most metals. Harmful if swallowed, by skin contact or by inhalation. Burns skin and eyes, Appour initiates eyes and mucous membranes. | Colourless liquid. Flashpoint: 41°C c.c. Explosive limits: 2% to 8%.<br>Immiscible with water, irritating to skin, eyes and mucous membranes. | Category D. Clear of living quarters. Clear colourless liquid with a pungent odour. Miscible with water. Highly toxic or solution of the contact or by inhalation. | Crystalline solid. Meting point: 52°C. Soluble in water. Toxicif swallowed, by skin contact or by dust inhalation. | . Colouries ilquids with an aromatic odour. Flashpoint: 36°C to 59°C c.c. On contact with moisture, can ecolve hydrogen fluoride, which is a toxic and corrosive gas. Harmful by inhalation. | Colouriess itquid, immisclible with water. Toxic if swallowed, by skin contact or by inhalation. | Colourless liquid with a pungent odour, immiscible with water. Reacts with water, evolving carbon dioxide. Toxic if swallowed, by skin contact or by inhalation. Irritating to skin, eyes and mucous membranes. | Yellow or orange crystalline powders or needles. Insoluble in water, Toxic if swallowed, by skin contact or by dust inhalation. | Colouriess to brown liquids. Flashpoint. 43°C to 47°C c.c. immiscible with water. When involved in a fire, evolve toxic gases. Harmful by skin contact or by inhalation. Irritating to eyes and mucous membranes. | Crystalline solids. Some isomers may melt at low temperature: melting range between O'C and 24°C. Toxic if swallowed, by skin contact or by inhalation. |
|                                       | Stowage and Segregation (16)     | 7.1 to 7.7  | Category C. Protected from sources of heat. | MSC 90/28/Add.3 ANNEX 4 ANNEX 4 Figs 90 | Properties and Observations | (17)                 |                | A liquid mixture of sulphuric acid and a chromium compound (e.g., etromium trioxide or sodium dictiromate) and sometimes also water. Highly corrosive to most metals. Causes severe burns to skin, eyes and muccois menthranes. | Category B. Clear of living quarters. Olly liquid: Immiscible with water, Narcolic. | Oily liquid. Immiscible with water. | Colourless liquid. Flashpoint: 56°C c.c., immiscible with water. Irritating to skin, eyes and mucous membranes. | Colourless, oily liquid. Flashpoint: 51 °C c.c. Immiscible with water. | Colourless liquid. Flashpoint: 31°C c.c. Immiscible with water. | Colourless liquid. Flashpoint: –30°C c.c. Bolling point: 44°C. Immiscble with water. Irritating to skin, eyes and mucous membranes. Narcotic. | Colourless liquid. Flashboint: 47°C c.c. Explosive limits: 0.8% to 5.5%, immiscible with water. | Colourless, flammable liquid with an amine odour. Flashpoint: 39°C c.c. Partially miscible with water. Decomposes when heared, evolving flammable and toxic gases. Uquid is corrosive to skin, eyes and mucous membranes, Vapour inflates mucous membranes. | Category D. Clear of living quarters. Colourless, volatile, flammable liquid, flashpoint. 4.2°C c.c. Immiscible with water, Decomposed by heat and water. Highly loves of is substance is prohibited skin contact or by inhalidion. The transport of this substance is prohibited except with special authorization granted by the competent authorities. | Colourless to yellowish crystalline solid with an irritating odour. Insoluble in water. Reads with water, evolving earthon doorder. Toxic if swallowed, by skin contact or by inhalation. May be carried in the molten state. Irritating to skin, eyes and mucous membranes. | Colourless, volatile liquid. Flashpoint: below-18°C c.c.<br>Explosive limits: 1.7% to 6.3%. Immiscible with water. | Colouriess liquid with an ethereal odour. Flashpoint: 1°C cc. Miscible with water. | Yellowish to brownish oily liquid. Combustible. Toxic if swallowed, by skin contact or by inhalation. | Matches, the heads of which are prepared with a friction-sensitive igniter composition and a pyrotechnic composition which burns with little or no flame, but with intense heat, regardless of wind or other weather conditions. | Colourless liquid with an aromatic odour. Immiscible with water. Slightly irritating to skin, eyes and mucous membranes. |
|                                         | Stowage and Segregation     | (16)                 | 7.1 to 7.7     | Category B. Clear of living quarters. Segregation as for class 5.1, but "Separated from" classes 4.1, 5.1 and 7.                                                                                                                | Category B. Clear of living quarters.                                               | Category B.                         | Category A.                                                                                                     | Category A.                                                            | Category A.                                                     | Category E.                                                                                                                                   | Category A.                                                                                     | Category A.                                                                                                                                                                                                                                                 | Category D. Clear of living quarters.                                                                                                                                                                                                                                                                                                                     | Category B. Protected from sources of heat. Clear of living quarters.                                                                                                                                                                                                        | Category D.                                                                                                        | Category B.                                                                        | Category A.                                                                                           | Category A.                                                                                                                                                                                                                      | Category E.                                                                                                              |

| MISC 90/25/ARU.<br>ANNEX 4<br>Page 97 | Properties and Observations | (71)    |     | Soft, silvery metal, solid or liquid. Floats on water, Reacts violently with moisture, water or acids, evolving hydrogen, which may be lignited by the heat of the reaction. Highly reactive, sometimes with explosive effect. | Colouries, flammable liquid with an ammoniacal odour. Flashpoint range. 33°CLG 48°CLC, Miscible with water. When involved in a fire, evolves toxic gases. Hardin by inhalation. Causes burns to skin and eyes. Irritating to mucous membranes. | Moderately viscous, yellow combustible liquid with an ammoniacal odour.<br>All of the complete with the complete complete with the complete mixtures with<br>mitric acid. When involved in a fire, evolves tookt gase. Corrosive to<br>proper and oppe langles, Reacts of langles, and was a<br>cause burns to skin, eyes and mucous membranes. Causes skin allergy. | Colourless liquid. Flashpoint: 35°C.c.c. Partially miscible with water. When involved in a fire, evolves toxic gases. Harmful by inhalation. Causes burns to skin and eyes. Irritating to mucous membranes. | Crystals or needles. To xic if swallowed, by skin contact or by inhalation. | Colourless to yellow liquid with a pungent odour. Immiscible with water. Reacts with water, evolving toxic and corrosive fumes. Causes tears. Causes burns to skin, eyes and mucous membranes. | Colourless liquids. Flashpoint: 5°C to 16°C c.c. Immiscible with water. | Caegory A. Clear of Iving quarters. Colourless, flammable liquid, Elsthooint 43°C c. Partially miscible with value, gots and muscus membrares. | Colourless liquid. Flashpoint: SR*C.c.: Explosive limits: 2.2% to 16%.<br>Miscible with water. May react violently with oxidizing materials. | Colouries liquid with a fishy odour. Flashpoint: –11°C c.c. Miscible with water. Harmful by Inhalation. Causes burns to skin, eyes and mucous membranes. | Colourless, combustible liquid with a pungent odour. Reacts slowly with<br>the control of the colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour colour c | Colourless combustible liquid. Miscible with water. Harmfui if swallowed or by inhalation. Corrosive to skin, eyes and mucous membranes. | Aqueous solution of a flammable gas with an ammonia-like odour.  Solovie limits: Six of H&E. FIHAMIR SOLUTION, conventration 509;  If shiponia-IT C. C.c.; bolling point 56°. Pure ETHYLAMIR: bolling point spiral point 50°. Pure ETHYLAMIR: bolling point spiral and curves burns to 84m, eyes and mucous membranes. Reacts violently with acids. | Colourless liquids. Vapour is much heavier than air (4.4). ETHYL normal—<br>AMYL KETONE fashpoint AFC C.c. ETHYL secondary—AMYL KETONE<br>flashpoint 57°C c.c. immiscible with water. Dissolves some types of<br>plastics. Irritating to skin, eyes and mucous membranes. | Category A. "Separated from" acids. Colourless to yellowish olly liquid. Reacts with acids, evolving highly toxic and class 5.1. Separated from a fumes of aniline and oxides of hirtogen Reacts voludity with oxidizing sand class 5.1. by shin contact or by inhalation. |

| MSC 90/28/Add 3<br>ANNEX 4<br>Page 98 | Properties and Observations (17)        |                | Brown liquid, Immiscible with water, Reacts with acids, evolving highly toxic furnes of aniline and oxides of nitrogen. Reacts widently with oxidizing substances. Toxic if swallowed, by skin contact or by inhalation. | Light yellow, oily liquid. Immiscible with water. Toxic if swallowed, by skin contact or by inhaliation. | Colourless liquid. Flashpoint: 57°C o.c. Immiscible with water. | . Colourless liquid. Flashpoint: 50°C c.c.<br>Miscible with water. Irritating to skin, eyes and mucous membranes. | Colourless liquid with a pungent odour. Flashpoint. 20°C o.c.<br>Explosive limits: 1,8% to Immiscible with water. Irritating to skin, eyes and mucous membranes. | Colourless liquid. Flashpoint: -3°C c.c. immiscible with water. | Colourless liquid. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation. | White crystals or shiny flakes with a specific odour. Melting point: 39°C. Soluble in water; solution in water is a strong alkali. Decomposes when heated, evolving flammable and toxic gases. Causes burns to skin, eyes and mucous membranes. | See entry above.                                       | Colourless to light yellow liquid with a pungent odour, immiscible with ware bluer teasts with the evolying best and cathord loading gas. When heated, evolves to solic nitrous furnes, Toxic if swallowed, by skin conact or by inhalation, irritating to skin, eyes and muccous membranes. | Colourless liquids. normal–HEXANOL: flashpoint 57°C c.c. Miscible with water. | Colourless liquid. Flashpoint. 49°C.cc. immiscible with water, irritating to skin, eyes and mucous membranes. | Colourless liquid. Flashpoint: 8°C c.c. Immiscible with water. Toxic by skin contact or by inhaliation. | 5 Colourless or yellowish liquids with a pungent odour.<br>Flashpoint of ortho- and meta-isomers: SCC, Immiscible with water, but<br>reacts with it to form carbon dioxide gas. Toxic if swallowed, by skin<br>contact or by inhalidron, initiating to skin, eyes and mucous membranes. | Colourless liquid. Flashpoint: 43°C c.c. Immiscible with water. | Colourless liquids, Immiscible with water. |

| MSC 90.28Add.3 ANNEX 4 Pare 99        | bservations                    | (17)     |                                         | Colourless liquids. Boiling range: 54°C to 69°C. Immiscible with water. | Colourless, silghtly hygroscopic liquid with a slight amine odour. Combustible. Miscible with water. Harmful if swallowed. Irritating to skin, eyes and mucous membranes. | Colourless or yellowish liquid. Immiscible with water. When involved in a fire, evolves nitrous fumes. Toxic if swallowed, by skin contact or by inhalation, irritating to skin, eyes and mucous membranes. | Colourless crystals or powder. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | Colourless liquid. Flashpoint: 49°C c.c. Immiscible with water. | Colourless to brown combustible liquid. Toxic if swallowed, by skin contact or by inhalation. | Colourless, flammable liquid with a purgent odour. Flashpoint. 47°C.c.c. Vapour much heavier than air (vapour density relative to air 3.8). Immiscible with water. Highly toxic if swallowed, by skin contact or by inhalation. | Colourless liquid. Flashpoint: –4°C.c.c. Explosive limits: 1.2% to 6.7%. Immiscible with water. Irritating to skin, eyes and mucous membranes. | Colourles to pale yellow liquids with a sweet odour.  SAEMTHICCTOREAWONE: Historyonic 45 C.c., 3-METHICCTOREAWONE: Historyonic 45 C.c., 3-METHICCTOREAWONE: Historyonic 50 C.c., Immiscible with water. | Colourless liquid. Flashpoint: below-10°C c.c. Explosive limits: 1% to 8.4%, Immiscible with water. Irritating to skin, eyes and mucous membranes. | Liquid. Toxic if swallowed, by skin contact or by inhalation. | Colourless liquid with a pungent odour. Toxic if swallowed, by skin contact or by inhalation. | Colourless liquid with a sweetsh odour. Flashpoint: –30°C c.c. immiscible with water. When involved in a fire, evolves toxic gases. Harmful if swallowed or by inhalation. Irritating to skin, eyes and mucous membranes. | Colourless liquid. Flashpoint: 43°C c.c. Immiscible with water. | Colourless liquid. Flas hpoint: 38°C to 54°C c.c. Explosive limits: 0,7% to 6,6% immiscible with water. Irritating to skin, eyes and mucous membranes. |

Miscible with water. Toxic if swallowed, by skin contact or by inhalation. Colourless to yellowish liquids. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation. Colourless liquid (pure product) with perceptible odours. Immiscible with water. Harmful by Ingestion to by Skin chanated. If Spilled can be a wastern harmful to the environment. This entry also covers anticles, such as transformers and condensers, containing free liquid polychlorinated. taken to avoid all possible and molten naphthalene above water will cause violent foaming Clear, straw-coloured, oily liquid. Oxidant which may cause fire with organic materials (such as wood, straw, etc.) When involved in a fire, evolves toxic gases, in the presence of moisture, highly corrosive to most metals, Causes burns to skin, eyes and mucous membranes. White prowder, Soluble in water. Reacts with acids or acid fumes, evolving hydrogen coyanide, a highly toxic and flammable gas. Highly toxic if swallowed, by skin contact or by dust inhalation. Pale straw-coloured, oily liquids with an aromatic odour. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation. Colourdes to yellow liquids with a pungent or sweet odour. Explosive limits. 1.3% to 8.7%. Miscible with water, Hammid by inhalation. Albra-picoline flashpoint. 28°C cc. Beta-picoline flashpoint. 40°C cc. gamma-picoline flashpoint 40°C cc. Irritating to skin, eyes and mucous membranes. Viscous liquid. Miscible with water. When involved in a fire, evolves toxic gases. Causes burns to skin, eyes and mucous membranes. Reacts violently with acids. Yellowish, oily liquid. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation. Colourless or yellowish liquids. Flashpoint: 32°C to 49°C c.c. Immiscible with water. ent odour. Melting point: 80°C. Evolves melting point of naphthalene approximates by skin Colourles s liquid. Miscible with water. Decomposed by acids, evolving hydrogen cyanide, a highly toxic and flammable gas. Highly toxic if swallowed, by skin contact or by inhalation. Colourless needles to lemon-coloured flakes. Soluble in water. Reacts violently with acids. Colourless liquid. Flashpoint: 9°C to 15°C c.c. Immiscible with water 80°C. Evolves Molten liquid with a distinctive strong odour.
Melting point: 10°C to 43°C (pure product). Toxic if swallowed, contact or by inhalation. Rapidly absorbed through the skin. Crystals. Soluble in water. Causes burns to skin, eyes and Properties and Observations (17) As the causes of ignition. Contact 110°C must be avoided, or even an explosion Molten liquid with a Category A. Clear of living quarters. Category A. Segregation from foodstuffs as in 7.3.4.2.1, 7.6.3.1.2 or 7.7.3.6. Category A. "Separated from" acids. Category A. "Separated from" acids. Category A. | MSC 90                                 | Properties and Observations (17) |          | Colouries ilquids. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation. | Coloufess liquid. Immiscible with water. When heated, develops toxic and irritant gases such as phospere and hydrogen chloride and may also explode. Toxic if swallowed, by skin contact or by inhalation. | Colourless liquid. Flashpoint: 44°C.c.c. immiscible with water. Irritating to skin, eyes and mucous membranes. | Colourles sliquid. Immiscible with water. | Colourless Ilquid. Flashpoint. 44°C c.c. Immiscible with water. Harmful by inhalation. | Colourless, slightly hygroscopic, combustible liquid with a slight amine odour, immiscible with water, Causes burns to skin, eyes and mucous membranes. | Colourless, slightly hygroscopic, combustible liquids. Miscible with water.<br>Irritating to skin, eyes and mucous membranes. | Colouriess or yellowish liquid. Reacts with water, evolving carbon dioxide.<br>Toxic if swallowed, by skin contact or by inhalation. Irritating to skin, eyes and mucous membranes. | Colourless liquid. Flashpoint: 23°C c.c. Immiscible with water. Irritating to skin, eyes and mucous membranes. | Colourless liquid. Flashpoint: 60°C c.c. Immiscible with water. | White, deliquescent crystals. Soluble in water. Dust causes burns to skin, eyes and mucous membranes. | Colouriess liquid. Flashpoint: 40°C.c.c. Explosive limits: 4.2% to 52%. Freezing point 12°C. Miscible with water, irritating to skin, eyes and mucous membranes. | Colouriess liquid. Flashpoint: 7C c.c. Partially miscible with water. Toxic if swallowed, by skin contact or by inhalation. Harmful if swallowed. | Colouriess to light wellow volatile liquid with a pumpert odour. Flashpoints—<br>Co. C. Exposius miner. 2.8 km. St. Belling range 55°C to 58°C.<br>Misc lib with water. When Involved in a fire, evolves highly toxic gases,<br>Highly toxic if swallowed, by skin contact or by inhalatios. |  |

| MSC 90/28/Add.3<br>ANNEX 4<br>Page 102 | Properties and Observations (17) |          | Colourless liquid. Immiscible with water. Highly toxic if swallowed, by skin contact or by inhalation. | Colouries flammable liquid with a foul odour. Flashpoint: 50°C cc. The colouries of the contract with acids or when involved in a fire, evenes highly oxic sulphinuous furnes. Highly toxic if swallowed, by Skin contact or by inhalation. | Colourless liquid with an aromatic odour. Flashpoine: 12°C c.c. Explosive limits: 2.1½ to Immiscible with water. On contact with moisture or air evolves hydrogen fluoride, which is a toxic and corrosive gas. Harmful by inhalation, irritating to skin, eyes and mucous membranes. | Colourless liquid with a pleasant odour. Flashpoint: 21°C c.c. Immiscible with water. When involved in a fire evolves toxic fumes. Narcotic. | Colourless liquid with an ethereal odour. Partially miscible with water.<br>Harmful by Inhalation. | Colourless liquid. Flashpoint: 23°C to 32°C c.c. Immiscible with water. | Colouriess liquids. Immiscible with water. Harmful by inhalation. | Colourless or yellow liquid with a strong odour. Flashpoint: 21°C c.c.<br>Immiscible with water. Harmful by inhalation. | Category B. Clear of living quarters. Colourless (liqués, immiscible with water. When involved in a fire, evolve toxic fumes. Harmful by inhalation. | See entry above.   | colourists to light make fuglication is about additional colourists of the make fuglication and the colourists of the make fuglication make the and effect than and (4.1). The pure the colourist is shock is such the and decidence and the possibility of detenation, when heated under confinement. Can be the possibility of detenation, when heated under confinement. Can be unuseful by white the makest of the possibility of detenation, when heated under confinement. Can be the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the prop | Greenish-yellow liquid with a strong odour. |          | Properties and Observations (17) |                | Yellowish, volatile, oily liquids. Partially miscible with water. Decompose on exposure to air, light, water or heat, evolving toxic nitrous fumes. Harmful by inhalation. | . See entry above.                    | Colouriess, volatile liquid with a sharp ethereal odour.<br>Flashpoint: -9°C c.c. immiscible with water. Harmful by inhalation.<br>Irritating to skin, eyes and mucous membranes. | Colourless Iquud with a pungent odour. Reacts with water, evolving hydrogen choids, an irritating and correstive gas apparent as white furnes. In the presence of most urue, highly corrosive to most meals. Causes burns to skin, eyes and mucous membranes. | Colourless liquid with a pungent odour. Partially miscible with water. Furnes, in air, evolving hydrogen chloride, which is an irritating and corrosive gas. Toxic by inhalation. Strong lachrymator. | Colourless liquid. Flashpoint: –32°C c.c. Explosive limits: 2.8% to 10.7%. Boling point: 35°C immiscible with water. On contact with heat or flame, emits highly toxic phosgene gas. Can react vigorously with oxidizing materials. | . Colourless or yellowish flammable liquid with a fishy odour. Flashpoint: 27°C c.C. Explosive limits: 0.5% to 21.7%. Miscible with water. Harmful by inhalation. Causes burns to skin and eyes. Irritating to mucous membranes. | Colourless liquid. Freezing point:-4°C. Immiscible with water. | Colourless, volatile liquid with a disagreeable odour. Flashpoint: TC c.c. Partially miscible with water. Toxicif swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membanes. | Colourless, volatile liquid with a perceptible odour. Flashpoint: -11°C.c.c. immiscible with water. Toxic if swallowed, by skin contact or by inhalation. | Colourless liquid with a fishy odour. Flashpoint: 29°C c.c.<br>Immiscible with water. Harmful by inhalation. Causes burns to skin and<br>eyes. Irritating to mucous membranes. | Colourless liquid with an aromatic, ethereal odour. Flashpoint: –10°C c.c. Explosive limits: 5.6% to Immiscible with water. When involved in a fire, emits toxic fumes of phosgene. Harmful by inhalation. | Volatile liquid with a strong unpleasant odour. Flashpoint: —45°C c.c.<br>Explosive limits: 2.8% to 18.2%. Bolling point: 35°C. Immiscible with water. | Colourless iquid. Flashpoint: 39°C c.c. Explosive limits: 0.8% to 6%.<br>Immiscible with water. | Colourless liquid. Flashpoint: 25°C to 31°C c.c. Vapour much heavier than air (4.1), Immiscible with water. Irritating to skin, eyes and mucous membranes. | Colourless iquid. Flashpoint. 13°C.cc. immiscible with water, irritating to skin, eyes and mucous membranes. |

| MSC 90.28/Add.3<br>ANNEX 4<br>Page 106 | Properties and Observations (17)                                      |             | Colourless liquid with a fish-like odour. Miscible with water. Reacts violently with acids. Solution in water is a strong alkali and is corrosive. When involved in fire evolves toxic nitrous furnes. | Colourless or yellowish liquids with a strong unpleasant odour.<br>Flashpoint: below-18°C c.c. Boiling range: 53°C to 67°C. Immiscible with<br>water. | Colourless liquid. Flashpoint: 10°C c.c. immiscible with water. | Colourless, volatile liquid with an ether-like odour. Flashpoint: 2°C c.c. Explosive limits: 3.1% to Miscoble with water. When involved in a fire, evolves lightly toxic oyanide fumes. Toxic if swallowed, by skin contact or by infalation. | Colourless liquid. Flashpoint: 25°C.c.; immiscible with water, irritating to skin, eyes and mucous membranes. | Colouriess liquid. Flashpoint: 20°C c.c. immiscible with water. Narcotic.<br>Irritating to skin, eyes and mucous membranes. | Colourless flammable liquid. Flashpoint: 16C c.c. Decomposed by water, working thoughes including and corrosive gas apparent as sowing through presence of mostitue, corrosive most metals. Highly white furnes, in the presence of mostitue, corrosive most metals. Highly better cited fivallened, by skin contact or by inhalation. Causes burns to skin, eye and mucous membranes. | Colourless liquid. Flashpoint: 21°C c.c. Immiscible with water. | Colourless liquid. Flashpoint: 16°C c.c., Miscible with water. Harmful by inhalation. | Colourless liquid. Flashpoint: 21°C cc. Explosive limits: 1.6% to<br>Immiscible with water. Toxic if swallowed, by skin contact or by inhalation. | Colourless liquid with a pleasant odour. Flashpoint: 13°C c.c Inmiscible with water. | Colourless liquid. Flashpoint: 38°C c.c. | Colourless liquid with an unpleasant odour. Flashpoint: –9°C c.c. Explosive limits: 1.5% to 12.5%. immiscible with water. Irritating to skin, eyes and mucous membranes. | Colouriess liquid. Reacts with water, evolving flammable vapours. | Non-flammable, toxic and corrosive colourless gas with a pungent odour. Corrosive to glass and to most metals. Corrosive in the presence of water. Much heavier than air (2.3). Highly irritating to skin, eyes and mucous membranes. | Non-flammable, toxic and corrosive, colourless gas with a pungent odour. Reacts with water, most air or exist by produce toxic and corrosive flumes. Corrosive to glass and to most metals. Much heavier than air (3,7). Highly irritating to skin, eyes and mucous membranes. |

Some have low melting points. Insoluble in water, Cause burns to skin, eyes and mucous membranes. | See entry above.                                                 | See entry above.                                                 | Reddish or yellowish olly liquid. Immiscible with water. Toxic if swallowed,<br>by skin contact or by inhalation. | Colourless to yellow-brown oily liquid. Combustible. Toxic if swallowed, by skin comact or by inhalation. | Immiscible with water. Oxidizing substance which may explode or burn flercely when in contact with organic materials. Toxic if swallowed, by skin contact or by inhalation. |                                      | Colourles liquid with a pungent odour. Reacts with water, evolving property and young any office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office and office an | Colouriess or yellow liquid with a pungent odour. Miscible with water.<br>Harmful by inhalation. | Colouries I iquid. Reacts with water, evolving prodrogen chloride, an<br>Thirding and conveye gas appared as white I movel when involved in a<br>fire reolves toxic gasses, in the presence of mosture, highly corrosive to<br>most metals. Causes burns to skin, eyes and mucous membranes. | <ul> <li>Flammable Iquid. Flashpoint: 19°C c.c. Boiling point: 108°C. Reacts with<br/>water, evoling Moogen Foldoid, a corrosive aga papear et as with<br/>flames, in the presence of mosture, corrosive on most media. Highly toxic<br/>flashlowed, by Ric frontact or by Inhalation. Causes burns to skin, eyes<br/>and mucoso membranes.</li> </ul> | White, crystalline powder. Soluble in water. Decomposed by heat or acids, evolving phydogen florder, a box, externely infraing and corrosive gas. In the presence of moststue, highly corrosive to glass, other siliceous materials and most metals. Causes burns to skin, eyes and mucous membranes. | White, deliquescent solid. Melting point: about 60°C. Soluble in water. In the presence of water, corrosive to most metals. Irritating to skin, eyes and mucous membranes. | <ul> <li>Finely divided, violet, crystalline solid. May ignite on exposure to air or<br/>moisture. In the presence of moisture, corrosive to most metals. Causes<br/>burns to skin, eyes and mucous membranes.</li> </ul> | Liquid with a pungent odour, which furnes in moist air, with water, evolving hydrogen chloride, a corrosive gas funes. When involved in a fire, evolves toxic gases. In t moisture, corrosive to most metals, Liquid and vapours skih, eyes and muccous membranes. |
