| MSC 90/28/Add.3<br>ANNEX 4<br>Pags 191 | Properties and Observations UN No (17) |            | oxic liquids which present a highly toxic inhalation hazard as flammable and corrosive. Highly toxic if swallowed, by skin y inhalation. Causes burns to skin, eyes and mucous | A variety of foxic liquids which present a highly toxic inhalation hazard as 345 well as being water-reactive and flammable. Highly toxic if swallowed, by skin contact or by inhalation. | A variety of toxic liquids which present a highly toxic inhalation hazard as 345 well as being water-reactive and flammable. Highly toxic if swallowed, by skin contact or by inhalation. | immiscible with water. Evolves hydrogen sulphide, which is a flammable, 345 toxic gas with a foul odour, heavier than air (1.2). Toxic if svallowed, by skin contact or by inhalation. |                                                 |                                                 | Bluish-black solid with a metallic lustre and a pungent odour. Melting 345 point: 114°C, Below its melting point, may evelve vapours which are irritating to skin, eyes and muccus membranes. Slightly soluble in water but soluble in most organic solvents. Corrosive to most metals. |                                             | Plink to red meal derived from Krill which is a shrimp-like marine organism. Medlum odour, which may affect other sensitive cargo. Liable to organism. Medlum odour, which may affect other sensitive cargo. Liable to sport |                 | Red Liquid. Reacts violently with water, evolving irritating and corrosive 345<br>gases appeared as white funes. Powerlast voloxidart, may assee free<br>contact with organic materials such has wood, cotton or straw. In the<br>presence of infosture highly corrosive to most metals. Vapour irritates<br>muccos membranes. | Articles intended to store energy containing a non-dangerous activated 345 carbon and an electrolyre. Electric double layer capacitors installed in equipment may be transported in a charged state. | Liquids, passes or powders, pressurized with a propellant which meets the 350 definition of a gas. |                                                 |                                                       |                                                       |

MARITIME SAFETY COMMITTEE 90th session Agenda item 28

MSC 90/28/Add.4 21 June 2012 Original: ENGLISH

## REPORT OF THE MARITIME SAFETY COMMITTEE ON ITS NINETIETH SESSION

Attached is the third part of annex 4 (Annex 3, Amendments to the International Maritime Dangerous Goods (IMDG) Code (amendment 36-12), Index) to the report of the Maritime Safety Committee on its ninetieth session (MSC 90/28).

\*\*\*

MSC 90/28/Add.4

### **ANNEX 4**

# RESOLUTION MSC.328(90) – ADOPTION OF AMENDMENTS TO THE INTERNATIONAL MARITIME DANGEROUS GOODS (IMDG) CODE (amendment 36-12)

Annex 3

Index

## Index

In this Index, the word "see", after the name in the substance, material or article column, means that it is a synonym and for details regarding the transport provisions reference shall be made to the entry in the Dangerous Goods List (chapter 3.2) which is relevant to the UN Number/Proper Shipping Name stated against the synonym.

## Method of indexing

Substances, materials and articles have been listed in the alphabetical order of their names. For the purpose of determining the alphabetical order, numbers and roman numerals (I), (II) etc. and the prefixes listed below have been disregarded, although they form an integral part of the name:

#### Note 1

Certain marine pollutants are identified only in the Index. These marine pollutants have not been assigned to an N.O.S. or generic entry. These marine pollutants may possess properties of classes 1 to 8 and should be classified accordingly. A substance which does not fall within the criteria of these classes should be offered for transport as an ENVIRONMENTALLY HAZARDOUS SUBSTANCE, SOLID, N.O.S., UN 3077, or as an ENVIRONMENTALLY HAZARDOUS SUBSTANCE, LIQUID, N.O.S., UN 3082, under these entries in class 9.

| Substance, material or article                                                                                        | MP | Class | UN No |

| ZIRCONIUM, DRY finished sheets, strip or coiled wire                                                                                                             | -  | 4.2   | 2009   |
| ZIRCONIUM HYDRIDE                                                                                                                                                | -  | 4.1   | 1437   |
| ZIRCONIUM NITRATE                                                                                                                                                | -  | 5.1   | 2728   |
| ZIRCONIUM PICRAMATE dry or wetted with less than 20% water, by mass                                                                                              | -  | 1.3C  | 0236   |
| ZIRCONIUM PICRAMATE, WETTED with not less than 20% water, by mass                                                                                                | -  | 4.1   | 1517   |
| ZIRCONIUM POWDER, DRY                                                                                                                                            | -  | 4.2   | 2008   |
| ZIRCONIUM POWDER, WETTED with not less than 25% water (a visible excess of water must be present)  (a) mechanically produced, particle size less than 53 microns | -  | 4.1   | 1358   |
| ZIRCONIUM POWDER, WETTED with not less than 25% water (a visible excess of water must be present) (b) chemically produced, particle size less than 840 microns   | -  | 4.1   | 1358   |
| ZIRCONIUM, SCRAP                                                                                                                                                 | -  | 4.2   | 1932   |
| ZIRCONIUM, SUSPENDED IN A FLAMMABLE LIQUID                                                                                                                       | -  | 3     | 1308   |
| ZIRCONIUM TETRACHLORIDE                                                                                                                                          | -  | 8     | 2503   |
|                                                                                                                                                                  |    |       |        |

## TSFS 2015:66 Bilaga 2

RESOLUTION MSC.372(93)
(adopted on 22 May 2014)
AMENDMENTS TO THE INTERNATIONAL MARITIME
DANGEROUS GOODS (IMDG) CODE

#### ANNEX 8

## RESOLUTION MSC.372(93) (adopted on 22 May 2014)

# AMENDMENTS TO THE INTERNATIONAL MARITIME DANGEROUS GOODS (IMDG) CODE

THE MARITIME SAFETY COMMITTEE,

RECALLING Article 28(b) of the Convention on the International Maritime Organization concerning the functions of the Committee,

NOTING resolution MSC.122(75) by which it adopted the International Maritime Dangerous Goods Code (hereinafter referred to as "the IMDG Code"), which has become mandatory under chapter VII of the International Convention for the Safety of Life at Sea (SOLAS), 1974, as amended (hereinafter referred to as "the Convention"),

NOTING ALSO article VIII(b) and regulation VII/1.1 of the Convention concerning amendment procedure for amending the IMDG Code,

HAVING CONSIDERED, at its ninety-third session, amendments to the IMDG Code, proposed and circulated in accordance with article VIII(b)(i) of the Convention,

- 1 ADOPTS, in accordance with article VIII(b)(iv) of the Convention, amendments to the IMDG Code, the text of which is set out in the annex to the present resolution;
- DETERMINES, in accordance with article VIII(b)(vi)(2)(bb) of the Convention, that the said amendments shall be deemed to have been accepted on 1 July 2015, unless prior to that date, more than one third of the Contracting Governments to the Convention or Contracting Governments the combined merchant fleets of which constitute not less than 50% of the gross tonnage of the world's merchant fleet, have notified their objections to the amendments:
- 3 INVITES Contracting Governments to the Convention to note that, in accordance with article VIII(b)(vii)(2) of the Convention, the amendments shall enter into force on 1 January 2016 upon their acceptance in accordance with paragraph 2 above;
- 4 AGREES that Contracting Governments to the Convention may apply the aforementioned amendments in whole or in part on a voluntary basis as from 1 January 2015;
- 5 REQUESTS the Secretary-General, in conformity with article VIII(b)(v) of the Convention, to transmit certified copies of the present resolution and the text of the amendments contained in the annex to all Contracting Governments to the Convention;
- 6 ALSO REQUESTS the Secretary-General to transmit copies of this resolution and its annex to Members of the Organization, which are not Contracting Governments to the Convention.

#### **ANNEX**

## AMENDMENTS TO THE INTERNATIONAL MARITIME DANGEROUS GOODS (IMDG) CODE

#### **Table of Contents**

Insert a new section as "7.1.5 Stowage Codes".

Insert a new section as "7.1.6 Handling Codes".

Insert a new section as "7.2.8 Segregation Codes".

## PART 1 GENERAL PROVISIONS, DEFINITIONS AND TRAINING

## Chapter 1.1- General provisions

## 1.1.1 Application and implementation of the Code

1.1.1.9 Insert a new paragraph 1.1.1.9 to read as follows:

#### "1.1.1.9 Lamps containing dangerous goods

The following lamps are not subject to this Code provided that they do not contain radioactive material and do not contain mercury in quantities above those specified in special provision 366 of chapter 3.3:

- .1 Lamps that are collected directly from individuals and households when transported to a collection or recycling facility;
- .2 Lamps each containing not more than 1 g of dangerous goods and packaged so that there is not more than 30 g of dangerous goods per package, provided that:
  - (i) the lamps are manufactured according to a certified quality management system;

Note: The application of ISO 9001:2008 may be considered acceptable for this purpose.

and

(ii) each lamp is either individually packed in inner packagings, separated by dividers, or surrounded with cushioning material to protect the lamps and packed into strong outer packagings meeting the general provisions of 4.1.1.1 and capable of passing a 1.2 m drop test.

.3 Used, damaged or defective lamps each containing not more than 1 g of dangerous goods with not more than 30 g of dangerous goods per package when transported from a collection or recycling facility. The lamps shall be packed in strong outer packagings sufficient for preventing release of the contents under normal conditions of transport meeting the general provisions of 4.1.1.1 and that are capable of passing a drop test of not less than 1.2 m.

Note: lamps containing gases of class 2.2. are addressed in 2.2.2.6.4 and lamps containing radioactive material are addressed in 2.7.2.2.2.2.

.4 Lamps containing only gases of class 2.2 (according to 2.2.2.2) provided they are packaged so that the projectile effects of any rupture of the bulb will be contained within the package."

#### 1.1.2 Conventions

#### 1.1.2.3 International Convention for Safe Containers, 1972, as amended

1.1.2.3 Insert a new 1.1.2.3 with the following:

## "1.1.2.3 International Convention for Safe Containers, 1972, as amended

1.1.2.3.1 Regulations 1 and 2 of Annex I to the International Convention for Safe Containers (CSC), 1972, as amended, deal with safety approval plates and maintenance and examination of containers, and are reproduced in full.

### Annex I

## Regulations for the testing, inspection, approval and maintenance of containers

## Chapter I

Regulations common to all systems of approval

### Regulation 1

Safety Approval Plate

- 1 (a) A Safety Approval Plate conforming to the specifications set out in the appendix to this annex shall be permanently affixed to every approved container at a readily visible place, adjacent to any other approval plate issued for official purposes, where it would not be easily damaged.
  - (b) On each container, all maximum operating gross mass markings shall be consistent with the maximum operating gross mass information on the Safety Approval Plate.
  - (c) The owner of the container shall remove the Safety Approval Plate on the container if:

- the container has been modified in a manner which would void the original approval and the information found on the Safety Approval Plate, or
- (ii) the container is removed from service and is not being maintained in accordance with the Convention, or
- (iii) the approval has been withdrawn by the Administration.
- 2 (a) The plate shall contain the following information in at least the English or French language:

#### **CSC SAFETY APPROVAL**

Country of approval and approval reference

Date (month and year) of manufacture

Manufacturer's identification number of the container or, in the case of existing containers for which that number is unknown, the number allotted by the Administration

Maximum operating gross mass (kg and lb)

Allowable stacking load for 1.8g (kg and lb)

Transverse racking test force (newtons).

- (b) A blank space should be reserved on the plate for insertion of end-wall and/or side-wall strength values (factors) in accordance with paragraph 3 of this regulation and annex II, tests 6 and 7. A blank space should also be reserved on the plate for the first and subsequent maintenance examination dates (month and year) when used.
- Where the Administration considers that a new container satisfies the requirements of the present Convention in respect of safety and if, for such container, the end-wall and/or side-wall strength values (factors) are designed to be greater or less than those stipulated in annex II, such values shall be indicated on the Safety Approval Plate. Where the stacking or racking values are less than 192,000 kg or 150 kN, respectively, the container shall be considered as having limited stacking or racking capacity and shall be conspicuously marked, as required under the relevant standards\*, at or before their next scheduled examination or before any other date approved by the Administration, provided this is not later than 1 July 2015.

- The presence of the Safety Approval Plate does not remove the necessity of displaying such labels or other information as may be required by other regulations which may be in force.
- A container, the construction of which was completed prior to 1 July 2014, may retain the Safety Approval Plate as permitted by the Convention prior to that date as long as no structural modifications occur to that container.

#### Regulation 2

Maintenance and examination

- The owner of the container shall be responsible for maintaining it in safe condition.
- 2 (a) The owner of an approved container shall examine the container or have it examined in accordance with the procedure either prescribed or approved by the Contracting Party concerned, at intervals appropriate to operating conditions.
  - (b) The date (month and year) before which a new container shall undergo its first examination shall be marked on the Safety Approval Plate.
  - (c) The date (month and year) before which the container shall be re-examined shall be clearly marked on the container on or as close as practicable to the Safety Approval Plate and in a manner acceptable to that Contracting Party which prescribed or approved the particular examination procedure involved.
  - (d) The interval from the date of manufacture to the date of the first examination shall not exceed five years. Subsequent examination of new containers and re-examination of existing containers shall be at intervals of not more than 30 months. All examinations shall determine whether the container has any defects which could place any person in danger.
- 3 (a) As an alternative to paragraph 2, the Contracting Party concerned may approve a continuous examination programme if satisfied, on evidence submitted by the owner, that such a programme provides a standard of safety not inferior to the one set out in paragraph 2 above.
  - (b) To indicate that the container is operated under an approved continuous examination programme, a mark showing the letters ACEP and the identification of the Contracting Party which has granted approval of the programme shall be displayed on the container on or as close as practicable to the Safety Approval Plate.
  - (c) All examinations performed under such a programme shall determine whether a container has any defects

which could place any person in danger. They shall be performed in connection with a major repair, refurbishment, or on-hire/off-hire interchange and in no case less than once every 30 months.

- As a minimum approved programmes should be reviewed once every 10 years to ensure their continued viability. In order to ensure uniformity by all involved in the inspection of containers and their ongoing operational safety, the Contracting Party concerned shall ensure the following elements are covered in each prescribed periodic or approved continuous examination programme:
  - (a) methods, scope and criteria to be used during examinations:
  - (b) frequency of examinations;
  - (c) qualifications of personnel to carry out examinations;
  - (d) system of keeping records and documents that will capture:
    - (i) the owner's unique serial number of the container:
    - (ii) the date on which the examination was carried out;
    - (iii) identification of the competent person who carried out the examination:
    - (iv) the name and location of the organization where the examination was carried out:
    - (v) the results of the examination; and
    - (vi) in the case of a periodic examination scheme (PES), the next examination date (NED);
  - (e) a system for recording and updating the identification numbers of all containers covered by the appropriate examination scheme;
  - methods and systems for maintenance criteria that addresses the design characteristics of the specific containers;
  - (g) provisions for maintaining leased containers if different than those used for owned containers; and
  - (h) conditions and procedures for adding containers into an already approved programme.

- The Contracting Party shall carry out periodic audits of approved programmes to ensure compliance with the provisions approved by the Contracting Party. The Contracting Party shall withdraw any approval when the conditions of approval are no longer complied with.
- For the purpose of this regulation, the Contracting Party concerned is the Contracting Party of the territory in which the owner is domiciled or has his head office. However, in the event that the owner is domiciled or has his head office in a country the government of which has not yet made arrangements for prescribing or approving an examination scheme and until such time as the arrangements have been made, the owner may use the procedure prescribed or approved by the Administration of a Contracting Party which is prepared to act as the Contracting Party concerned. The owner shall comply with the conditions for the use of such procedures set by the Administration in question.
- 7 Administrations shall make information on approved continuous examination programmes publicly available."

### Chapter 1.2 - Definitions, units of measurement and abbreviations

#### 1.2.1 Definitions

In all the definitions, whenever the term "for the transport of Class 7 material" is used, replace it with "for the transport of radioactive material".

Amend the following definitions as indicated:

Design: in the first sentence, insert "fissile material excepted under 2.7.3.5.6 after "the description of".

Exclusive use: replace "and unloading is carried" with "and unloading and shipment are carried" and insert ", where so required by the provisions of this Code;" after "consignee".

Freight container: replace the last two sentences with the following:

"In addition: Small freight container means a freight container that has an internal volume of not more than 3  $\rm m^3$ . Large freight container means a freight container that has an internal volume of more than 3  $\rm m^3$ ."

GHS: in the reference for GHS, replace Rev.4 with "Rev.5"

Manual of Test and Criteria, add at the end "and Amend.2".

Multiple-element gas container: replace "and bundles" with "or bundles".

Radiation level: amend the end of the definition to read: "millisieverts per hour or microsieverts per hour;".

Add the following new definitions in alphabetical order:

"Large salvage packaging means a special packaging which:

- .1 is designed for mechanical handling; and
- .2 exceeds 400 kg net mass or 450 litres capacity but has a volume of not more than 3 m³;

into which damaged, defective or leaking dangerous goods packages, or dangerous goods that have spilled or leaked are placed for purposes of transport for recovery or disposal;"

"Management system, for the transport of radioactive material, means a set of interrelated or interacting elements (system) for establishing policies and objectives and enabling the objectives to be achieved in an efficient and effective manner;"

"Neutron radiation detector is a device that detects neutron radiation. In such a device, a gas may be contained in a hermetically sealed electron tube transducer that converts neutron radiation into a measureable electric signal:"

"Radiation detection system is an apparatus that contains radiation detectors as components;".

#### Chapter 1.5 – General provisions concerning class 7

Replace the title with "GENERAL PROVISIONS CONCERNING RADIOACTIVE MATERIAL".

# 1.5.1 Scope and application

1.5.1.1 Amend the second and third sentences to read:

"These provisions are based on the IAEA "Regulations for the Safe Transport of Radioactive material, 2012 Edition, IAEA Safety Standards Series No. SSR-6, IAEA, Vienna (2012)". Explanatory material can be found in "Advisory material for the IAEA Regulations for the Safe Transport of Radioactive Material, IAEA Safety Standards Series No. TS-G-1.1 (Rev.2), IAEA, Vienna (2012)"."

- 1.5.1.2 In the second sentence of the last paragraph replace "imposing requirements" with "imposing conditions".
- 1.5.1.4 Amend the first sentence to read: "The provisions of this code do not apply to any of the following:" and insert a new subparagraph .4 to read as follows:
  - ".4 Radioactive material in or on a person who is to be transported for medical treatment because the person has been subject to accidental or deliberate intake of radioactive material or to contamination:".

and renumber current subparagraphs .4 to .6 accordingly:

and replace new subparagraph .6 (former .5) with the following:

".6 Natural material and ores containing naturally occurring radionuclides (which may have been processed), provided the activity concentration of the material does not exceed 10 times the values specified in table 2.7.2.2.1, or calculated in accordance with 2.7.2.2.2.1 and 2.7.2.2.3 to 2.7.2.2.6. For natural materials and ores containing naturally occurring radionuclides that are not in secular equilibrium the calculation of the activity concentration shall be performed in accordance with 2.7.2.2.4;".

# 1.5.1.5 Specific provisions for the transport of excepted packages

#### 1.5.1.5.1 Amend to read as follows:

- "1.5.1.5.1 Excepted packages which may contain radioactive material in limited quantities, instruments, manufactured articles or empty packagings as specified in 2.7.2.4.1 shall be subject only to the following provisions of parts 5 to 7:
  - .1 The applicable provisions specified in 5.1.1.2, 5.1.2, 5.1.3.2, 5.1.5.2.2, 5.1.5.4, 5.2.1.7, 7.1.4.5.9, 7.1.4.5.10, 7.1.4.5.12, 7.8.4.1 to 7.8.4.6 and 7.8.9.1; and
  - .2 The requirements for excepted packages specified in 6.4.4,

except when the radioactive material possesses other hazardous properties and has to be classified in a class other than Class 7 in accordance with special provision 290 or 369 of Chapter 3.3, where the provisions listed in .1 and .2 above apply only as relevant and in addition to those relating to the main class or division."

1.5.1.5.2 Insert a new second sentence to read as follows:

"If the excepted package contains fissile material, one of the fissile exceptions provided by 2.7.2.3.5 shall apply and the requirements of 5.1.5.5 shall be met."

# 1.5.2 Radiation protection programme

1.5.2.4 Amend the end of the introductory sentence to read "that the effective dose either:" and insert "or" at the end of subparagraph .1.

#### 1.5.3 Quality assurance

- 1.5.3 Amend to read as follows:
  - "1.5.3 Management system
  - 1.5.3.1 A management system based on international, national or other standards acceptable to the competent authority shall be established and implemented for all activities within the scope of this Code, as identified in 1.5.1.3, to ensure compliance with the relevant provisions of this Code. Certification that the design specification has been fully implemented shall be available to the competent authority. The manufacturer, consignor or user shall be prepared:
    - .1 to provide facilities for inspection during manufacture and use; and
    - .2 to demonstrate compliance with this Code to the competent authority.

Where competent authority approval is required, such approval shall take into account and be contingent upon the adequacy of the management system."

# 1.5.4 Special arrangement

1.5.4.2 Replace "Class 7" with "radioactive material", twice.

## 1.5.6 Non-compliance

1.5.6.1 In the introductory sentence, delete "a" before "non-compliance". In .1 amend the introductory sentence to read:

"The consignor, consignee, carrier and any organization involved during transport who may be affected, as appropriate, shall be informed of the non-compliance:"

and in .2(iv), delete "and" at the end of the sentence.

# PART 2 CLASSIFICATION

# Chapter 2.0 - Introduction

# 2.0.1 Classes, divisions, packing groups

#### 2.0.1.2 Marine pollutants

2.0.1.2.1 Amend paragraph 2.0.1.2.1 to read as follows:

"Many of the substances assigned to classes 1 to 6.2, 8 and 9 are deemed as being marine pollutants (see chapter 2.10)."

2.0.1.3 Add the following new paragraph at the end:

"Articles are not assigned to packing groups. For packing purposes any requirement for a specific packaging performance level is set out in the applicable packing instruction.".

- 2.0.3 Classification of substances, mixtures and solutions with multiple hazards (precedence of hazard characteristics)
- 2.0.3.5 Amend the last sentence to read as follows:

"For radioactive material in excepted packages, except for UN 3507, URANIUM HEXAFLUORIDE, RADIOACTIVE MATERIAL, EXCEPTED PACKAGE, special provision 290 of Chapter 3.3 applies."

### Chapter 2.1 – Class 1 – Explosives

# 2.1.0 Introductory notes (these notes are not mandatory)

Amend Note 2 in 2.1.3.5.5 to read as follows:

"Note 2: "Flash composition" in this table refers to pyrotechnic substances in powder form or as pyrotechnic units as presented in the firework that are used to produce an aural effect or used as a bursting charge, or propellant charge unless the time taken for the pressure rise is demonstrated to be more than 6 ms for 0.5 g of pyrotechnic substance in the HSL Flash Composition Test in appendix 7 of the Manual of Tests and Criteria."

# Chapter 2. 2 - Class 2 - Gases

# 2.2.1 Definitions and general provisions

- 2.2.1.2 Add a new indent .5 to read as follows:
  - ".5 Adsorbed gas a gas which when packaged for transport is adsorbed onto a solid porous material resulting in an internal receptacle pressure of less than 101.3 kPa at 20°C and less than 300 kPa at 50°C."

#### 2.2.2 Class subdivisions

2.2.2.6 Delete subparagraph ".4" and add the following note at the end:

"Note: This exemption does not apply to lamps. For lamps see 1.1.1.9".

# Chapter 2.3 - Class 3 - Flammable liquids

# 2.3.2 Assignment of packing group

- 2.3.2.2 and 2.3.2.3 Replace existing paragraphs with the following:
  - "2.3.2.2 Viscous flammable liquids such as paints, enamels, lacquers, varnishes, adhesives and polishes having a flash point of less than 23°C may be placed in packing group III in conformity with the procedures prescribed in the Manual of Tests and Criteria, Part III, sub-section 32.3, provided that:
    - .1 The viscosity expressed as the flowtime in seconds and flash point are in accordance with the following table:

| Flow-time t in seconds | Jet diameter (mm) | Flash point, closed-cup (°C) |
|------------------------|-------------------|------------------------------|
| 20 < t ≤ 60            | 4                 | above 17                     |
| $60 \le t \le 100$     | 4                 | above 10                     |
| $20 \le t \le 32$      | 6                 | above 5                      |
| $32 < t \leq 44$       | 6                 | above -1                     |
| $44 < t \leq 100$      | 6                 | above -5                     |
| 100 < t                | 6                 | no limit                     |

- .2 Less than 3% of the clear solvent layer separates in the solvent separation test;
- .3 The mixture or any separated solvent does not meet the criteria for Class 6.1 or Class 8;
- .4 The substances are packed in receptacles of not more than 30-litre capacity.

#### 2.3.2.3 Reserved."

- 2.3.2.5 At the beginning, replace "Viscous substances" with "Viscous liquids". Amend the fourth indent to read as follows:
  - "- are packed in receptacles of not more than 30-litre capacity".

Chapter 2.4 - Class 4 - Flammable solids; substances liable to spontaneous combustion; substances which, in contact with water, emit flammable gases

- 2.4.4 Class 4.3 Substances which, in contact with water, emit flammable gases
- 2.4.4.1 Definitions and properties
- 2.4.4.1.2 Replace "light bulbs" with "lamps"

#### Chapter 2.5 – Class 5 – Oxidizing substances and organic peroxides

- 2.5.1 Definitions and general provisions
- 2.5.2 Class 5.1 Oxidizing substances
- 2.5.2.2 Oxidizing solids
- 2.5.2.2.1 Classification of solid substances of class 5.1
- 2.5.2.2.1.1 Amend to read as follows:
  - "2.5.2.2.1.1 Tests are performed to measure the potential for the solid substance to increase the burning rate or burning intensity of a combustible substance when the two are thoroughly mixed. The procedure is given in the Manual of Tests and Criteria, part III, sub-section 34.4.1 (test O.1) or alternatively, in sub-section 34.4.3 (test O.3). Tests are conducted on the substance to be evaluated mixed with dry fibrous cellulose in mixing ratios of 1:1 and 4:1, by mass, of sample to cellulose. The burning characteristics of the mixtures are compared:
    - .1 in the test O.1, with the standard 3:7 mixture, by mass, of potassium bromate to cellulose. If the burning time is equal to or less than this standard mixture, the burning times shall be compared with those from the packing group I or II reference standards, 3:2 and 2:3 ratios, by mass, of potassium bromate to cellulose respectively; or
    - .2 in the test O.3, with the standard 1:2 mixture, by mass, of calcium peroxide to cellulose. If the burning rate is equal to or greater than this standard mixture, the burning rates shall be compared with those from the packing group I or II reference standards 3:1 and 1:1 ratios, by mass, of calcium peroxide to cellulose, respectively."
- 2.5.2.2.1.2 Amend to read as follows:
  - "2.5.2.2.1.2 The classification test results are assessed on the basis of:
    - .1 the comparison of the mean burning time (for the test O.1) or burning rate (for the test O.3) with those of the reference mixtures; and

.2 whether the mixture of substance and cellulose ignites and burns."

#### 2.5.2.2.1.3 Amend to read as follows:

- "2.5.2.2.1.3 A solid substance is classified in Class 5.1 if the 4:1 or 1:1 sample-to-cellulose ratio (by mass) tested, exhibits:
  - .1 in the test O.1, a mean burning time equal to or less than the mean burning time of a 3:7 mixture (by mass) of potassium bromate and cellulose; or
  - .2 in the test O.3, a mean burning rate equal to or greater than the mean burning rate of a 1:2 mixture (by mass) of calcium peroxide and cellulose."

#### 2.5.2.2. Assignment of packing groups

#### 2.5.2.2.2 Amend to read as follows:

### "2.5.2.2. Assignment of packing groups

Solid oxidizing substances are assigned to a packing group according to one of the test procedures in the Manual of Tests and Criteria, Part III, sub-section 34.4.1 (test O.1) or sub-section 34.4.3 (test O.3), in accordance with the following criteria:

#### .1 Test O.1:

- (i) Packing group I: any substance which, in the 4:1 or 1:1 sample-to-cellulose ratio (by mass) tested, exhibits a mean burning time less than the mean burning time of a 3:2 mixture, by mass, of potassium bromate and cellulose:
- (ii) Packing group II: any substance which, in the 4:1 or 1:1 sample-to-cellulose ratio (by mass) tested, exhibits a mean burning time equal to or less than the mean burning time of a 2:3 mixture (by mass) of potassium bromate and cellulose, and the criteria for packing group I are not met;
- (iii) Packing group III: any substance which, in the 4:1 or 1:1 sample-to-cellulose ratio (by mass) tested, exhibits a mean burning time equal to or less than the mean burning time of a 3:7 mixture (by mass) of potassium bromate and cellulose, and the criteria for packing groups I and II are not met;
- (iv) Not Class 5.1: any substance which, in both the 4:1 and 1:1 sample-to-cellulose ratio (by mass) tested, does not ignite and burn, or exhibits mean burning times greater than that of a 3:7 mixture (by mass) of potassium bromate and cellulose.

# .2 Test O.3:

- (i) Packing group I: any substance which, in the 4:1 or 1:1 sample-to-cellulose ratio (by mass) tested, exhibits a mean burning rate greater than the mean burning rate of a 3:1 mixture (by mass) of calcium peroxide and cellulose;
- (ii) Packing group II: any substance which, in the 4:1 or 1:1 sample-to-cellulose ratio (by mass) tested, exhibits a mean burning rate equal to or greater than the mean burning rate of a 1:1 mixture (by mass) of calcium peroxide and cellulose, and the criteria for packing group I are not met;
- (iii) Packing group III: any substance which, in the 4:1 or 1:1 sample-to-cellulose ratio (by mass) tested, exhibits a mean burning rate equal to or greater than the mean burning rate of a 1:2 mixture (by mass) of calcium peroxide and cellulose, and the criteria for packing groups I and II are not met;
- (iv) Not Class 5.1: any substance which, in both the 4:1 and 1:1 sample-to-cellulose ratio (by mass) tested, does not ignite and burn, or exhibits a mean burning rate less than the mean burning rate of a 1:2 mixture (by mass) of calcium peroxide and cellulose."

2.5.2.3.1.1 At the end of the second sentence after "3.4.4.2" insert "(test O.2)".

# Chapter 2.6 - Class 6 - Toxic and infectious substances

#### 2.6.3 Class 6.2 – Infectious substances

2.6.3.2.3 Exemptions

#### 2.6.3.2.3.5 Amend to read as follows:

"2.6.3.2.3.5 Dried blood spots, collected by applying a drop of blood onto absorbent material, are not subject to the provisions of this Code."

and insert two new paragraphs 2.6.3.2.3.6 and 2.6.3.2.3.7 to read as follows and renumber existing paragraphs accordingly:

- "2.6.3.2.3.6 Faecal occult blood screening samples are not subject to the provisions of this Code.
- 2.6.3.2.3.7 Blood or blood components which have been collected for the purposes of transfusion or for the preparation of blood products to be used for transfusion or transplantation and any tissues or organs intended for use in transplantation as well as samples drawn in connection with such purposes are not subject to the provisions of this Code."

## Chapter 2.7 - Class 7 - Radioactive material

# 2.7.1.3 Definitions of specific terms

#### 2.7.1.3 Amend the definitions hereafter as follows:

Fissile nuclides: Amend the end of the introductory text before subparagraph .1 to read: "of fissile material are the following:".

In subparagraph .1, delete "and".

Insert the following new subparagraphs and text:

- ".3 material with fissile nuclides less than a total of 0.25 g;
- .4 any combination of .1, .2 and/or .3.

These exclusions are only valid if there is no other material with fissile nuclides in the package or in the consignment if shipped unpackaged."

Surface contaminated object: at the end, replace "surfaces" with "surface".

#### 2.7.2 Classification

#### 2.7.2.1 General provisions

# 2.7.2.1.1 Amend to read as follows:

"Radioactive material shall be assigned to one of the UN numbers specified in table 2.7.2.1.1, in accordance with 2.7.2.4.2 to 2.7.2.5, taking into account the material characteristics determined in 2.7.2.3."

#### Table 2.7.2.1.1 – Assignment of UN Numbers

#### 2.7.2.1.1 Amend the table as follows:

Table 2.7.2.1.1 Add a new heading row to read:

UN Nos. Proper shipping name and description

For UN Nos. 2912, 3321, 3322, 2913, 2915, 3332, 2916, 2917, 3323, 2919 and 2978, insert a reference to a new note "b" after "fissile-excepted".

Under the headings "Excepted packages" and "Uranium hexafluoride" add the following new entry:

"UN 3507 URANIUM HEXAFLUORIDE, RADIOACTIVE MATERIAL, EXCEPTED PACKAGE less than 0.1 kg per package, non-fissile or fissile-excepted<sup>b.cu</sup>

Add the following table notes "a", "b" and "c" after the table:

The proper shipping name is found in the column "proper shipping name and description" and is restricted to that part shown in capital letters. In the cases of UN Nos. 2909, 2911, 2913 and 3326, where alternative proper shipping names are separated by the word "or" only the relevant proper shipping name shall be used.

- The term "fissile-excepted" refers only to material excepted under 2.7.2.3.5.
- <sup>c</sup> For UN No. 3507, see also special provision 369 in Chapter 3.3."

# 2.7.2.2 Determination of activity level

2.7.2.2.1 In .2, insert "limits" after "concentration".

Table 2.7.2.2.1 In the heading of column 4 insert "limit" after "concentration". In (a) after the table, in the introductory sentence, replace "from daughter radionuclides" with "from their progeny".

#### 2.7.2.2.2 Amend the text before the table to read as follows:

#### "2.7.2.2.2 For individual radionuclides:

- .1 Which are not listed in table 2.7.2.2.1 the determination of the basic radionuclide values referred to in 2.7.2.2.1 shall require multilateral approval. For these radionuclides, activity concentration limits for exempt material and activity limits for exempt consignments shall be calculated in accordance with the principles established in the International Basic Safety Standards for Protection against Ionizing Radiation and for the Safety of Radiation Sources. Safety Series No.115. IAEA, Vienna (1996). It is permissible to use an A<sub>2</sub> value calculated using a dose coefficient for the appropriate lung absorption type as recommended by the International Commission on Radiological Protection, if the chemical forms of each radionuclide under both normal and accident conditions of transport are taken into consideration. Alternatively, the radionuclide values in table 2.7.2.2.2 may be used without obtaining competent authority approval:
- .2 In instruments or articles in which the radioactive material is enclosed or is included as a component part of the instrument or other manufactured article and which meet 2.7.2.4.1.3.3, alternative basic radionuclide values to those in table 2.7.2.2.1 for the activity limit for an exempt consignment are permitted and shall require multilateral approval. Such alternative activity limits for an exempt consignment shall be calculated in accordance with the principles set out in the International Basic Safety Standards for Protection against Ionizing Radiation and for the Safety of Radiation Sources, Safety Series No.115, IAEA, Vienna (1996)."

#### Table 2.7.2.2.2 – Basic radionuclide values for unknown radionuclides or mixtures

In the table for 2.7.2.2.2, in the heading of the fourth column, insert "limit" after "concentration".

2.7.2.2.4 In the introductory sentence delete "the determination of" and in the legend for X(i) and  $X_m$  replace "concentration" with "concentration limit".

#### 2.7.2.3 Determination of other material characteristics

- 2.7.2.3.1 Low specific activity (LSA) material
- 2.7.2.3.1.2.1 In subparagraph "(i)", delete "which are intended to be processed for the use of these radionuclides".
- 2.7.2.3.1.2.1 Subparagraph "(iii)" to read:
  - "(iii) radioactive material for which the A2 value is unlimited. Fissile material may be included only if excepted under 2.7.2.3.5;".
- 2.7.2.3.1.2.1 (iv), replace ", excluding fissile material not excepted under 2.7.2.3.5" with ". Fissile material may be included only if excepted under 2.7.2.3.5".
- 2.7.2.3.1.2.2 In subparagraph "(i)", delete "or".
- 2.7.2.3.1.2.3 In the introductory sentence, replace "meeting the requirements" with "that meet the requirements".
- 2.7.2.3.1.2.3 In subparagraph "(i)" replace "bitumen, ceramic, etc." with "bitumen and ceramic".
- 2.7.2.3.2 Surface contaminated object (SCO)
- 2.7.2.3.2.1 At the end of subparagraph "(ii)", replace "and" with "or".
- 2.7.2.3.2.2 At the end of subparagraph "(ii)", replace "and" with "or".
- 2.7.2.3.3 Special form radioactive material
- 2.7.2.3.3.6.1 Amend subparagraph ".1" to read as follows:
  - ".1 The tests prescribed in 2.7.2.3.3.5.1 and 2.7.2.3.3.5.2 provided that the specimens are alternatively subjected to the impact test prescribed in ISO 2919:2012: "Radiation Protection Sealed Radioactive Sources General requirements and classification":
    - (i) The Class 4 impact test if the mass of the special form radioactive material is less than 200 g; and
    - (ii) The Class 5 impact test if the mass of the special form radioactive material is equal to or more than 200 g but less than 500 g;".
- 2.7.2.3.3.6.2 Replace the reference "ISO 2919:1999" with "ISO 2919:2012".
- 2.7.2.3.3.8.2 Replace "which are acceptable" with "provided that they are acceptable".

#### 2.7.2.3 Determination of other material characteristics

#### 2.7.2.3.5 Fissile material

2.7.2.3.5 Amend the first paragraph to read as follows:

"Fissile material and packages containing fissile material shall be classified under the relevant entry as "FISSILE" in accordance with table 2.7.2.1.1 unless excepted by one of the provisions of subparagraphs .1 to .6 below and transported subject to the requirements of 5.1.5.5. All provisions apply only to material in packages that meets the requirements of 6.4.7.2 unless unpackaged material is specifically allowed in the provision."

#### 2.7.2.3.5 Fissile material

- 2.7.2.3.5 Delete current subparagraphs ".1" and ".4". Current ".2" and ".3" are renumbered as ".1" and ".2" respectively.
- 2.7.2.3.5 Insert the following new subparagraphs ".3 to .6":
  - ".3 Uranium with a maximum uranium enrichment of 5% by mass uranium-235 provided:
    - (i) there is no more than 3.5 g of uranium-235 per package;
    - the total plutonium and uranium-233 content does not exceed 1% of the mass of uranium-235 per package;
    - (iii) Transport of the package is subject to the consignment limit provided in 5.1.5.5.3;
  - .4 Fissile nuclides with a total mass not greater than 2.0 g per package provided the package is transported subject to the consignment limit provided in 5.1.5.5.4;
  - .5 Fissile nuclides with a total mass not greater than 45 g either packaged or unpackaged subject to limits provided in 5.1.5.5.5; and
  - A fissile material that meets the requirements of 5.1.5.5.2, 2.7.2.3.6 and 5.1.5.2.1.".

# Table 2.7.2.3.5 – Consignment mass limits for exceptions from the requirements for packages containing fissile material

Table 2.7.2.3.5 is deleted.

Insert a new paragraph 2.7.2.3.6 to read as follows:

- "2.7.2.3.6 A fissile material excepted from classification as "FISSILE" under 2.7.2.3.5.6 shall be subcritical without the need for accumulation control under the following conditions:
  - .1 The conditions of 6.4.11.1 (a);

- .2 The conditions consistent with the assessment provisions stated in 6.4.11.12 (b) and 6.4.11.13 (b) for packages; and
- .3 The conditions specified in 6.4.11.11 (a), if transported by air."

# 2.7.2.4 Classification of packages or unpacked material

- 2.7.2.4.1 Classification as excepted package
- 2.7.2.4.1.1 Amend to read as follows:
  - "2.7.2.4.1.1 A package may be classified as an excepted package if it meets one of the following conditions:
    - .1 It is an empty package having contained radioactive material:
    - .2 It contains instruments or articles not exceeding the activity limits specified in columns (2) and (3) of table 2.7.2.4.1.2;
    - .3 It contains articles manufactured of natural uranium, depleted uranium or natural thorium;
    - .4 It contains radioactive material not exceeding the activity limits specified in column (4) of table 2.7.2.4.1.2; or
    - .5 It contains less than 0.1 kg of uranium hexafluoride not exceeding the activity limits specified in column (4) of table 2.7.2.4.1.2."
- 2.7.2.4.1.3 In the introductory sentence replace "only if" with "provided that".
- 2.7.2.4.1.3.2 Replace "except" with "on its external surface except for the following:"

and amend (ii) to read as follows:

"(ii) consumer products that either have received regulatory approval in accordance with 1.5.1.4.5 or do not individually exceed the activity limit for an exempt consignment in table 2.7.2.2.1 (column 5), provided such products are transported in a package that bears the marking "RADIOACTIVE" on its internal surface in such a manner that a warning of the presence of radioactive material is visible on opening the package;

and insert a new subparagraph "(iii)" under ".2" to read as follows:

- "(iii) Other instruments or articles too small to bear the marking "RADIOACTIVE", provided that they are transported in a package that bears the marking "RADIOACTIVE" on its internal surface in such a manner that a warning of the presence of radioactive material is visible on opening the package; and".
- 2.7.2.4.1.4.2 Amend to read as follows:
  - ".2 The package bears the marking "RADIOACTIVE" on either:

- An internal surface in such a manner that a warning of the presence of radioactive material is visible on opening the package; or
- (ii) The outside of the package, where it is impractical to mark an internal surface."

#### Insert a new 2.7.2.4.1.5 to read as follows:

- "2.7.2.4.1.5 Uranium hexafluoride not exceeding the limits specified in column 4 of table 2.7.2.4.1.2 may be classified under UN 3507 URANIUM HEXAFLUORIDE, RADIOACTIVE MATERIAL, EXCEPTED PACKAGE, less than 0.1 kg per package, non-fissile or fissile-excepted provided that:
  - .1 The mass of uranium hexafluoride in the package is less than 0.1 kg; and
  - .2 The conditions of 2.7.2.4.5.1 and 2.7.2.4.1.4.1 and 2.7.2.4.1.4.2 are met."

and existing paragraph 2.7.2.4.1.5 is renumbered as "2.7.2.4.1.7".

- 2.7.2.4.1.6 Replace "only if" with "provided that".
- 2.7.2.4.1.7 (former 2.7.2.4.1.5) In the introductory sentence replace "only if" with "provided that".
- 2.7.2.4.4 Classification as Type A package
- 2.7.2.4.4 In the sentence before the subparagraphs, replace "activities greater than the following:" with "activities greater than either of the following:".
- 2.7.2.4.4.1 Delete "or".
- 2.7.2.4.4 In the legend for the formula where "C(j)", delete "and".
- 2.7.2.4.5 Classification of uranium hexafluoride
- 2.7.2.4.5 Amend to read as follows:
  - "2.7.2.4.5 Classification of uranium hexafluoride
  - 2.7.2.4.5.1 Uranium hexafluoride shall only be assigned to:
    - .1 UN No.2977, RADIOACTIVE MATERIAL, URANIUM HEXAFLUORIDE, FISSILE;
    - .2 UN No.2978, RADIOACTIVE MATERIAL, URANIUM HEXAFLUORIDE, non-fissile or fissile-excepted; or
    - .3 UN No.3507, URANIUM HEXAFLUORIDE, RADIOACTIVE MATERIAL, EXCEPTED PACKAGE less than 0.1 kg per package, non-fissile or fissile-excepted.

- 2.7.2.4.5.2 The contents of a package containing uranium hexafluoride shall comply with the following requirements:
  - .1 For UN Nos. 2977 and 2978, the mass of uranium hexafluoride shall not be different from that allowed for the package design, and for UN 3507, the mass of uranium hexafluoride shall be less than 0.1 kg;
  - .2 The mass of uranium hexafluoride shall not be greater than a value that would lead to an ullage smaller than 5% at the maximum temperature of the package as specified for the plant systems where the package shall be used; and
  - .3 The uranium hexafluoride shall be in solid form and the internal pressure shall not be above atmospheric pressure when presented for transport."
- 2.7.2.4.6 Classification as Type B(U), Type B(M) or Type C packages
- 2.7.2.4.6.1 Replace "competent authority approval certificate" with "competent authority certificate of approval".
- 2.7.2.4.6.2 Amend to read:
  - "2.7.2.4.6.2 The contents of a Type B(U), Type B(M) or Type C package shall be as specified in the certificate of approval".
- 2.7.2.4.6.3 is deleted.
- 2.7.2.4.6.4 is deleted.

# Chapter 2.9 – Miscellaneous dangerous substances and articles (class 9) and environmentally hazardous substances

Amend "Note 2" to read as follows:

"Although the environmentally hazardous substances (aquatic environment) criteria apply to all hazard classes, except for class 7 (see paragraphs 2.10.2.3, 2.10.2.5 and 2.10.3.2), the criteria have been included in this chapter."

# 2.9.2 Assignment to class 9

- 2.9.2.2 Under "Substances which, on inhalation as fine dust, may endanger health", replace all three entries by:
  - "2212 ASBESTOS, AMPHIBOLE (amosite, tremolite, actinolite, anthophyllite, crocidolite)
  - 2590 ASBESTOS, CHRYSOTILE".

replace the existing heading "Electric double layer capacitors" with "Capacitors",

and replace the existing entry under this heading with the following two entries:

"3499 CAPACITOR, ELECTRIC DOUBLE LAYER (with an energy storage capacity greater than 0.3Wh)

3508 CAPACITOR, ASYMMETRIC (with an energy storage capacity greater than 0.3Wh)."

Under "Life-saving appliances", replace the three entries for UN No.3268 by:

"3268 SAFETY DEVICES, electrically initiated".

For "Other substances or articles presenting a danger during transport, but not meeting the definitions of another class", add the following new entry with the corresponding footnote:

"3509 PACKAGING DISCARDED, EMPTY, UNCLEANED\*\*"

Footnote: "\*\* This entry shall not be used for sea transport. Discarded packaging shall meet the requirements of 4.1.1.11."

#### 2.9.4 Lithium batteries

2.9.4.1 Replace the second sentence with the following:

"Cells and batteries manufactured according to a type meeting the requirements of subsection 38.3 of the Manual of Tests and Criteria, Revision 3, Amendment 1 or any subsequent revision and amendment applicable at the date of the type testing may continue to be transported, unless otherwise provided in this Code.

Cell and battery types only meeting the requirements of the Manual of Tests and Criteria, Revision 3, are no longer valid. However, cells and batteries manufactured in conformity with such types before 1 July 2003 may continue to be transported if all other applicable requirements are fulfilled."

and amend the note to read as follows:

"Note: Batteries shall be of a type proved to meet the testing requirements of the *Manual of Tests and Criteria*, part III, sub-section 38.3, irrespective of whether the cells of which they are composed are of a tested type."

#### Chapter 2.10 – Marine Pollutants

# 2.10.2 General provisions

- 2.10.2.4 Amend to read as follows:
  - "2.10.2.4 Column 4 of the Dangerous Goods List also provides information on marine pollutants using the symbol P for single entries. The absence of the symbol P or the presence of a "-" in that column does not preclude the application of 2.10.3."
- 2.10.2.7 Add a new paragraph 2.10.2.7 as follows:
  - "2.10.2.7 Marine pollutants packaged in single or combination packagings containing a net quantity per single or inner packaging of 5 I or less for

liquids or having a net mass per single or inner packaging of 5 kg or less for solids are not subject to any other provisions of this Code relevant to marine pollutants provided the packagings meet the general provisions of 4.1.1.1, 4.1.1.2 and 4.1.1.4 to 4.1.1.8. In the case of marine pollutants also meeting the criteria for inclusion in another hazard class all provisions of this Code relevant to any additional hazards continue to apply."

# 2.10.3 Classification

- 2.10.3.2 Add a new paragraph "2.10.3.2" to read as follows:
  - "2.10.3.2 The classification criteria of 2.9.3 are not applicable to substances or materials of class 7."

# PART 3 DANGEROUS GOODS LIST, SPECIAL PROVISIONS AND EXEMPTIONS

- 3.1 General
- 3.1.2 Proper shipping names
- 3.1.2.9 Marine pollutants
- 3.1.2.9.1 Replace the existing paragraph 3.1.2.9.1 to read as follows:
  - "3.1.2.9.1 For the purpose of documentation, the Proper Shipping Name of generic or "not otherwise specified" (N.O.S.) entries which are classified as marine pollutants in accordance with 2.10.3, shall be supplemented with the recognized chemical name of the constituent which most predominantly contributes to the classification as marine pollutant."

# 3.1.4 Segregation groups

3.1.4.1 In the paragraph, replace the words "column 16" with "column 16b".

# Chapter 3.2 - Dangerous Goods List

# 3.2.1 Structure of the dangerous goods list

- 3.2.1 The following sentence is added at the end of column 4: "The absence of the symbol **P** or the presence of a "-" in that column does not preclude the application of 2.10.3."
- 3.2.1 The text for column 16 "column 16 Stowage and segregation this column contains the stowage and segregation provisions as prescribed in part 7." is replaced with the following:
  - "Column 16a Stowage and handling this column contains the stowage and handling codes as specified in 7.1.5 and 7.1.6.
  - Column 16 b Segregation this column contains the segregation codes as specified in 7.2.8."

TSFS 2015:66 Bilaga 2

# RESOLUTION MSC.372(93) (adopted on 22 May 2014) AMENDMENTS TO THE INTERNATIONAL MARITIME DANGEROUS GOODS (IMDG) CODE

MSC 93/22/Add.2 Annex 8, page 24

# **Dangerous Goods List**

Replace the existing "column 16" with column "16a Stowage and handling" and "column "16b Segregation" as follows:

# REORGANIZATION OF COLUMN 16 IN THE DANGEROUS GOODS LIST OF THE IMDG CODE

| UN<br>Number | PROPER SHIPPING NAME<br>(Note: When there is more than<br>one packing group or PSN the<br>UN No. has been annotated with<br>a, b, c) | Class or division | Subsidiary<br>risk(s) | Packing<br>Group | Stowage<br>and<br>Handling | Segregation  |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------|-------------------|-----------------------|------------------|----------------------------|--------------|

3.2.1 Dangerous Goods List

(adopted on 22 May 2014) AMENDMENTS TO THE INTERNATIONAL MARITIME DANGEROUS GOODS (IMDG) CODE RESOLUTION MSC.372(93)

| (17)          |               |                               | See 1.5.1.                                                                                                                              | Articles intended to store energy containing positive and negative electrodes comprised of different materials and an electrolyte. Asymetric capacitors may be transported in a charged state. | This entry shall not be used for sea transport. Discarded packaging shall meet the requirements of 4.1.1.11 biscarded packaging means packagings, large packagings or intermediate bulk containers (IBC), or parts thereof, which have contained dangerous goods, other than radioactive material, which are transported for disposal, recycling or recovery of their material, other than reconditioning, repair, routine maintenance, remanufacturing or reuse, and which have been emptied to the extent that only residues of dangerous goods adhering to the packaging parts are present. |                                    |                      |                                |                                    |                                           |                                           |                                           |                                                         |

| (17)  |                                                         | Non-flammable, toxic and corrosive gas. Forms dense white corrosive fumes in moist air. Reacts violently with water, evolving thydrogen fluoride, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to glass and most metals. Much heavier than air (2.35). Highly irritating to skin, eyes and mucous membranes. | Non-flammable, toxic and corrosive yellow gas with a pungent pungent doour. Corrosive to glass and to most metals. Much heavier than air (2.4). Highly inflating to skin, eyes and mucous membranes. Powerful axidant which may cause fire. | Non-flammable, toxic and corrosive gas with a pungent odour. odour. fluoride. Much heavier than air (3.6). Highly irritating to skin, eyes menbranes. | Flammable, toxic, colourless gas with a garlic odour.<br>Explosive limits: 3.9% to 77.8%. Much heavier than air<br>(2.8). | Flammable, toxic, colourless gas with a pungent odour.<br>Much heavier than air (2.6) | Non-flammable, toxic and corrosive gas with an irritating odour.  Reacts with water or moist air to produce toxic and corrosive fumes.  Corrosive fumes.  Corrosive to glass and to most metals. Much heavier than air (4.3), Hejhy irritating to skin, eyes and mucous menbranes. | Flammable, toxic, colourless gas with a garlic odour.<br>Ignites spontaneously in air. Heavier than air (1.2),<br>Irritating to skin, eyes and mucous membranes. | Flammable, toxic, colourless gas with a disagreeable odour.  Much heavier than air (2.8). Highly irritating to skin, eyes and mucous membranes. |

| (1)   | 3518                                                    | 3519                                                                                                                                                                                                                                                                                                                                                                   | 3520                                                                                                                                                                                                                                        | 3521                                                                                                                                                  | 3522                                                                                                                      | 3523                                                                                  | 3524                                                                                                                                                                                                                                                                               | 3525                                                                                                                                                             | 3526                                                                                                                                            |

## Chapter 3.3 - Special provisions applicable to certain substances, materials or articles

Amend the following Special Provisions as indicated hereunder:

SP 66 Amend to read as follows:

"Cinnabar is not subject to the provisions of this Code".

SP 122 At the end, add: ", 4.1.4.2 packing instruction IBC520 and 4.2.5.2.6 portable tank instruction T23."

SP 135 Amend to read as follows:

"135 The dihydrated sodium salt of dichloroisocyanuric acid does not meet the criteria for inclusion in Class 5.1 and is not subject to the provisions of this Code unless meeting the criteria for inclusion in another Class or Division."

#### SP 172 Amend to read as follows:

- "172 Where a radioactive material has (a) subsidiary risk(s):
  - .1 The substance shall be allocated to Packing Group I, II or III, if appropriate, by application of the packing group criteria provided in part 2 corresponding to the nature of the predominant subsidiary risk:
  - .2 Packages shall be labelled with subsidiary risk labels corresponding to each subsidiary risk exhibited by the material; corresponding placards shall be affixed to cargo transport units in accordance with the relevant provisions of 5.3.1;
  - .3 For the purposes of documentation and package marking, the proper shipping name shall be supplemented with the name of the constituents which most predominantly contribute to this (these) subsidiary risk(s) and which shall be enclosed in parenthesis;
  - .4 The dangerous goods transport document shall indicate the subsidiary class or division and, where assigned the packing group as required by 5.4.1.4.1.4 and 5.4.1.4.1.5.

For packing, see also 4.1.9.1.5."

#### SP 225 At the end, add:

"Fire extinguishers shall be manufactured, tested, approved and labelled according to the provisions applied in the country of manufacture. Fire extinguishers under this entry include:

- .1 portable fire extinguishers for manual handling and operation;
- .2 fire extinguishers for installation in aircraft;

MSC 93/22/Add.2 Annex 8, page 140

- .3 fire extinguishers mounted on wheels for manual handling;
- .4 fire extinguishing equipment or machinery mounted on wheels or wheeled platforms or units transported similar to (small) trailers, and
- .5 fire extinguishers composed of a non-rollable pressure drum and equipment, and handled e.g. by fork lift or crane when loaded or unloaded."

#### SP 235 Amend to read as follows:

"235 This entry applies to articles which contain Class 1 explosive substances and which may also contain dangerous goods of other classes. These articles are used to enhance safety in vehicles, vessels or aircraft – e.g. air bag inflators, air bag modules, seat-belt pretensioners, and pyromechanical devices."

SP 251 Insert the following new third paragraph after "to any individual substance in the kit":

"Where the kit contains only dangerous goods to which no packing group is assigned, no packing group need be indicated on the dangerous goods transport document."

#### SP 280 Amend to read as follows:

"280 This entry applies to safety devices for vehicles, vessels or aircraft, e.g. air bag inflators, air bag modules, seat-belt pretensioners, and pyromechanical devices, which contain dangerous goods of Class 1 or of other classes, when transported as component parts and if these articles as presented for transport have been tested in accordance with Test Series 6(c) of Part 1 of the Manual of Tests and Criteria, with no explosion of the device, no fragmentation of device casing or pressure receptacle, and no projection hazard nor thermal effect which would significantly hinder fire-fighting or emergency response efforts in the immediate vicinity. This entry does not apply to life saving appliances described in special provision 296 (UN Nos. 2990 and 3072)."

#### SP 289 Amend to read as follows:

"289 Safety devices, electrically initiated and safety devices, pyrotechnic installed in vehicles, vessels or aircraft or in completed components such as steering columns, door panels, seats, etc. are not subject to the provisions of this Code."

#### SP 306 Amend to read as follows:

"306 This entry may only be used for substances that are too insensitive for acceptance into Class 1 when tested in accordance with Test Series 2 (see Manual of Tests and Criteria, Part I)."

#### SP 309 Amend the last sentence to read as follows:

"Substances shall satisfactorily pass Tests 8(a), (b) and (c) of Test Series 8 of the Manual of Tests and Criteria, Part I, Section 18 and be approved by the competent authority."

MSC 93/22/Add.2 Annex 8, page 141

SP 310 At the end, include a new "Note" to read as follows:

"For damage or defective lithium batteries and cells see SP 376"

SP 361 At the end of subparagraph .5 insert "except those manufactured before 1 January 2014;"

SP 363 In subparagraph .3, replace "loaded in an orientation" with "oriented"

SP 919 is deleted.

SP 957 Is deleted.

SP 961 Replace existing 961 with the following:

"SP 961 Internal combustion engines, fuel cell engines, vehicles, and battery-powered equipment are not subject to the provisions of this Code if any of the following conditions are met:

- .1 Internal combustion engines, fuel cell engines vehicles, and battery-powered equipment are stowed on the vehicle, special category and ro-ro spaces or on the weather deck of a roll-on/roll-off ship or a cargo space designated by the Administration (flag State) in accordance with SOLAS 74, chapter II-2, regulation 20 as specifically designed and approved for the carriage of vehicles and there are no signs of leakage from the battery, engine, fuel cell, compressed gas cylinder or accumulator, or fuel tank when applicable. When packed in a cargo transport unit the exception does not apply to container cargo spaces of a ro-ro ship. Vehicles powered solely by lithium batteries and hybrid electric vehicles powered by both an internal combustion engine and lithium metal or ion batteries, the battery is of a type proved to meet the requirements of the United Nations Manual of Tests and Criteria, part III, subsection 38.3, unless otherwise approved by the competent Authority;
- .2 Internal combustion engines, vehicles powered by a flammable liquid fuel with a flashpoint of 38°C or above, there are no leaks in any portion of the fuel system, the fuel tank(s) contains 450 ℓ of fuel or less and installed batteries are protected from short-circuit.
- .3 Internal combustion engines with a fuel tank attached and vehicles powered by a flammable liquid fuel with a flashpoint less than 38°C, the fuel tank(s) are empty and installed batteries are protected from short circuit. The internal combustion engines or vehicle are considered to be empty of flammable liquid fuel when the fuel tank has been drained and the vehicle cannot be operated due to a lack of fuel. Engine components such as fuel lines, fuel filters and injectors do not need to be cleaned, drained or purged to be considered empty. The fuel tank does not need to be cleaned or purged;
- .4 Internal combustion engines with an attached fuel tank and vehicles powered by a flammable gas (liquefied or compressed), the fuel tank(s) are empty and the positive pressure in the tank does not exceed 2 bar, the fuel shut-off or isolation valve is closed and secured, and installed batteries are protected from short circuit;

MSC 93/22/Add.2 Annex 8, page 142

- .5 Vehicles or battery powered equipment solely powered by a wet or dry electric storage battery or a sodium battery, and the battery is protected from short circuit;
- .6 Internal combustion engines powered by a flammable liquid or flammable gas have been cleaned, drained and purged of all flammable liquids and gases or the engine has been sealed to prevent leakage of any residues; or
- .7 Fuel cell engines are protected from inadvertent operation by closing fuel supply lines or by other means and the fuel supply reservoir has been drained and sealed. The fuel supply reservoir does not need to be cleaned or purged.

Notwithstanding above, dangerous goods required for the operation of the internal combustion engines or the vehicle or for the safety of the operator such as fire extinguishers, compressed gas cylinders, accumulators, airbag inflators, starter batteries, etc., shall be securely mounted. All other dangerous goods in the vehicle shall be separately packaged and consigned for transport, as appropriate, in accordance with this Code.

For fuel cell engines, all dangerous goods other than fuel and fuel cells shall be separately packaged and consigned for transport, as appropriate, in accordance with this Code."

### SP 962 Replace 962 with the following:

- "SP 962 internal combustion engines, vehicles, fuel cell engines, or battery powered equipment not meeting the conditions of special provision 961 shall be assigned to class 9 and shall meet the following requirements:
  - .1 internal combustion engines, vehicles, combustion engines, fuel cell engines or battery powered equipment shall not show signs of leakage from batteries, engines, fuel cells, compressed gas cylinders or accumulators, or fuel tank(s) when applicable;
  - .2 for flammable liquid powered vehicles and internal combustion engines the fuel tank(s) containing the flammable liquid shall not be more than one fourth full and in any case the flammable liquid shall not exceed 250 ℓ unless otherwise approved by the competent authority;
  - .3 for flammable gas powered vehicles and internal combustion engines, the fuel shut-off valve of the fuel tank(s) shall be securely closed:
  - .4 installed batteries shall be protected from damage, short circuit, and accidental activation during transport. Lithium ion or lithium metal batteries shall be of a type proved to meet the requirements of the United Nations Manual of Tests and Criteria, part III, subsection 38.3, unless otherwise approved by the competent authority; and

Notwithstanding above dangerous goods required for the operation of the internal combustion engines or the vehicle or for the safety of the operator

such as fire extinguishers, compressed gas accumulators, airbag inflators, starter batteries, etc., shall be securely mounted.

The provisions of this Code relevant to marking, labelling, placarding and marine pollutants shall not apply."

SP 963 Replace the words "column 16" with "columns 16a and 16b"

Insert the following new special provisions:

"367 For the purposes of documentation and package marking:

The proper shipping name "Paint related material" may be used for consignments of packages containing "Paint" and "Paint related material" in the same package:

The proper shipping name "Paint related material, corrosive, flammable" may be used for consignments of packages containing "Paint, corrosive, flammable" and "Paint related material, corrosive, flammable" in the same package;

The proper shipping name "Paint related material, flammable, corrosive" may be used for consignments of packages containing "Paint, flammable, corrosive" and "Paint related material, flammable, corrosive" in the same package; and

The proper shipping name "Printing ink related material" may be used for consignments of packages containing "Printing Ink" and "Printing ink related material" in the same package."

"368 In the case of non-fissile or fissile-excepted uranium hexafluoride, the material shall be classified under UN 3507 or UN 2978."

"369 In accordance with 2.0.3.5, this radioactive material in an excepted package possessing corrosive properties is classified in Class 8 with a radioactive material subsidiary risk.

Uranium hexafluoride may be classified under this entry only if the conditions of 2.7.2.4.1.2, 2.7.2.4.1.5, 2.7.2.4.5.2 and, for fissile-excepted material, of 2.7.2.3.6 are met.

In addition to the provisions applicable to the transport of Class 8 substances, the provisions of 5.1.3.2, 5.1.5.2.2, 5.1.5.4.1.2, 7.1.4.5.9, 7.1.4.5.10, 7.1.4.5.12, and 7.8.4.1 to 7.8.4.6 shall apply.

No Class 7 label is required to be displayed."

### "370 This entry applies to:

- ammonium nitrate with more than 0.2% combustible substances, including any organic substance calculated as carbon, to the exclusion of any added substance; and
- ammonium nitrate with not more than 0.2% combustible substances, including any organic substance calculated as carbon, to the exclusion of any added substance, that is not too sensitive for acceptance into

MSC 93/22/Add.2 Annex 8, page 144

Class 1 when tested in accordance with Test Series 2 (see Manual of Tests and Criteria, Part I). See also UN No. 1942."

- "371 .1 This entry also applies to articles, containing a small pressure receptacle with a release device. Such articles shall comply with the following requirements:
  - (a) The water capacity of the pressure receptacle shall not exceed 0.5 litres and the working pressure shall not exceed 25 bar at 15°C;
  - (b) The minimum burst pressure of the pressure receptacle shall be at least four times the pressure of the gas at 15°C;
  - (c) Each article shall be manufactured in such a way that unintentional firing or release is avoided under normal conditions of handling, packing, transport and use. This may be fulfilled by an additional locking device linked to the activator;
  - (d) Each article shall be manufactured in such a way as to prevent hazardous projections of the pressure receptacle or parts of the pressure receptacle;
  - (e) Each pressure receptacle shall be manufactured from material which will not fragment upon rupture;
  - (f) The design type of the article shall be subjected to a fire test. For this test, the provisions of paragraphs 16.6.1.2 except letter g, 16.6.1.3.1 to 16.6.1.3.6, 16.6.1.3.7 (b) and 16.6.1.3.8 of the Manual of Tests and Criteria shall be applied. It shall be demonstrated that the article relieves its pressure by means of a fire degradable seal or other pressure relief device, in such a way that the pressure receptacle will not fragment and that the article or fragments of the article do not rocket more than 10 m;
  - (g) The design type of the article shall be subjected to the following test. A stimulating mechanism shall be used to initiate one article in the middle of the packaging. There shall be no hazardous effects outside the package such as disruption of the package, metal fragments or a receptacle which passes through the packaging.
- .2 The manufacturer shall produce technical documentation of the design type, manufacture as well as the tests and their results. The manufacturer shall apply procedures to ensure that articles produced in series are made of good quality, conform to the design type and are able to meet the requirements in .1. The manufacturer shall provide such information to the Competent Authority on request."
- "372 This entry applies to asymmetric capacitors with an energy storage capacity greater than 0.3 Wh. Capacitors with an energy storage capacity of 0.3 Wh or less are not subject to the provisions of this Code.

Energy storage capacity means the energy stored in a capacitor, as calculated according to the following equation,

Wh = 
$$1/2C_N(U_R^2-U_L^2) \times (1/3600)$$
,

using the nominal capacitance ( $C_N$ ), rated voltage ( $U_R$ ) and rated lower limit voltage ( $U_I$ ).

All asymmetric capacitors to which this entry applies shall meet the following conditions:

- (a) Capacitors or modules shall be protected against short circuit;
- (b) Capacitors shall be designed and constructed to safely relieve pressure that may build up in use, through a vent or a weak point in the capacitor casing. Any liquid which is released upon venting shall be contained by packaging or by equipment in which a capacitor is installed;
- (c) Capacitors shall be marked with the energy storage capacity in Wh, except those manufactured before 1 January 2016;
- (d) Capacitors containing an electrolyte meeting the classification criteria of any class or division of dangerous goods shall be designed to withstand a 95 kPa pressure differential;

Capacitors containing an electrolyte not meeting the classification criteria of any class or division of dangerous goods, including when configured in a module or when installed in equipment are not subject to other provisions of this Code. Capacitors containing an electrolyte meeting the classification criteria of any class or division of dangerous goods, with an energy storage capacity of 20 Wh or less, including when configured in a module, are not subject to other provisions of this Code when the capacitors are capable of withstanding a 1.2 metre drop test unpackaged on an unyielding surface without loss of contents.

Capacitors containing an electrolyte meeting the classification criteria of any class or division of dangerous goods that are not installed in equipment and with an energy storage capacity of more than 20 Wh are subject to this Code.

Capacitors installed in equipment and containing an electrolyte meeting the classification criteria of any class or division of dangerous goods, are not subject to other provisions of these Regulations provided that the equipment is packaged in a strong outer packaging constructed of suitable material, and of adequate strength and design, in relation to the packaging's intended use and in such a manner as to prevent accidental functioning of capacitors during transport. Large robust equipment containing capacitors may be offered for transport unpackaged or on pallets when capacitors are afforded equivalent protection by the equipment in which they are contained.

Note: Notwithstanding the provisions of this special provision, nickel-carbon asymmetric capacitors containing Class 8 alkaline electrolytes shall be transported as UN 2795, BATTERIES, WET, FILLED WITH ALKALI, electric storage."

"373 Neutron radiation detectors containing non-pressurized boron trifluoride gas may be transported under this entry provided that the following conditions are met:

MSC 93/22/Add.2 Annex 8, page 146

- .1 Each radiation detector shall meet the following conditions.
  - (i) The pressure in each detector shall not exceed 105 kPa absolute at 20°C;
  - (ii) The amount of gas shall not exceed 13 g per detector;
  - (iii) Each detector shall be manufactured under a registered quality assurance programme;

**NOTE:** The application of ISO 9001:2008 may be considered acceptable for this purpose.

- (iv) Each neutron radiation detector shall be of welded metal construction with brazed metal to ceramic feed through assemblies. These detectors shall have a minimum burst pressure of 1800 kPa as demonstrated by design type qualification testing; and
- (v) Each detector shall be tested to a 1 x 10<sup>-10</sup> cm<sup>3</sup>/s leaktightness standard before filling.
- .2 Radiation detectors transported as individual components shall be transported as follows:
  - Detectors shall be packed in a sealed intermediate plastics liner with sufficient absorbent material to absorb the entire gas contents;
  - (ii) They shall be packed in strong outer packaging. The completed package shall be capable of withstanding a 1.8 m drop test without leakage of gas contents from detectors;
  - (iii) The total amount of gas from all detectors per outer packaging shall not exceed 52 g.
- .3 Completed neutron radiation detection systems containing detectors meeting the conditions of paragraph (a) shall be transported as follows:
  - (i) The detectors shall be contained in a strong sealed outer casing:
  - (ii) The casing shall contain sufficient absorbent material to absorb the entire gas contents;
  - (iii) The completed systems shall be packed in strong outer packagings capable of withstanding a 1.8 m drop test without leakage unless a system's outer casing affords equivalent protection.

Packing instruction P200 of 4.1.4.1 is not applicable.

The transport document shall include the following statement "Transport in accordance with special provision 373".

Neutron radiation detectors containing not more than 1 g of boron trifluoride, including those with solder glass joints, are not subject to this Code provided they

meet the requirements in paragraph .1 and are packed in accordance with paragraph .2. Radiation detection systems containing such detectors are not subject to this Code provided they are packed in accordance with paragraph .3.

Nuclear radiation detectors shall be stowed in accordance with stowage Category A."

"SP 376 Lithium ion cells or batteries and lithium metal cells or batteries identified as being damaged or defective such that they do not conform to the type tested according to the applicable provisions of the Manual of Tests and Criteria shall comply with the requirements of this special provision.

For the purposes of this special provision, these may include, but are not limited to:

- Cells or batteries identified as being defective for safety reasons;
- Cells or batteries that have leaked or vented:
- Cells or batteries that cannot be diagnosed prior to transport; or
- Cells or batteries that have sustained physical or mechanical damage.

**NOTE:** In assessing a battery as damaged or defective, the type of battery and its previous use and misuse shall be taken into account.

Cells and batteries shall be transported according to the provisions applicable to UN 3090, UN 3091, UN 3480 and UN 3481, except special provision 230 and as otherwise stated in this special provision.

Packages shall be marked "DAMAGED/DEFECTIVE LITHIUM-ION BATTERIES" or "DAMAGED/DEFECTIVE LITHIUM METAL BATTERIES", as applicable.

Cells and batteries shall be packed in accordance with packing instructions P908 of 4.1.4.1 or LP904 of 4.1.4.3, as applicable.

Cells and batteries liable to rapidly disassemble, dangerously react, produce a flame or a dangerous evolution of heat or a dangerous emission of toxic, corrosive or flammable gases or vapours under normal conditions of transport shall not be transported except under conditions specified by the competent authority."

"SP 377 Lithium ion and lithium metal cells and batteries and equipment containing such cells and batteries transported for disposal or recycling, either packed together with or packed without non-lithium batteries, may be packaged in accordance with packing instruction P909 of 4.1.4.1.

These cells and batteries are not subject to the requirements of section 2.9.4.

Packages shall be marked "LITHIUM BATTERIES FOR DISPOSAL" or "LITHIUM BATTERIES FOR RECYCLING".

Identified damaged or defective batteries shall be transported in accordance with special provision 376 and packaged in accordance with P908 of 4.1.4.1 or LP904 of 4.1.4.3, as applicable."

MSC 93/22/Add.2 Annex 8, page 148

"SP 968 This entry shall not be used for sea transport. Discarded packaging shall meet the requirements of 4.1.1.11."

"SP 969 Substances classified in accordance to 2.9.3 are subject to the provisions for marine pollutants. Substances which are transported under UN 3077 and 3082 but which do not meet the criteria of 2.9.3 (see 2.9.2.2) are not subject to the provisions for marine pollutants. However for substances that are identified as marine pollutants in this Code (see Index) but which no longer meet the criteria of 2.9.3, the provisions of 2.10.2.6 apply."

"SP 970 This entry only applies to internal combustion engines (including machinery or equipment powered by such engines) to fuel cell engines, and to vehicles powered by flammable liquid, flammable gas and fuel cells containing flammable liquid or gas (including hybrid electric vehicles, see SP 312 or SP 240). For the purposes of this entry vehicles are defined as road vehicles (e.g. cars, motorcycles), boats, aircraft, wheeled or tracked construction or farming equipment and any other self-propelled apparatus designed to carry one or more persons or goods. For internal combustion engines where the requirement of Special Provisions 961 or 962 are not met, an appropriate name and description shall be selected and the relevant provisions of this Code shall apply. If a vehicle is powered by a flammable liquid and a flammable gas internal combustion engine, it shall be assigned to UN 3166 VEHICLE, FLAMMABLE GAS POWERED."

## Chapter 3.4 – Dangerous goods packed in limited quantities

#### 3.4.1 General

3.4.1.2 In subparagraph ".5" delete the reference "5.3.2.3".

## 3.4.3 Stowage

3.4.3 In the paragraph, replace the words "column 16" with "column 16a".

### 3.4.4 Segregation

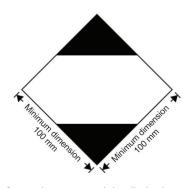

3.4.4.1 In subparagraph ".2" replace the words "column 16" with "column 16b"

### 3.4.5 Marking and placarding

Amend section 3.4.5.1 and 3.4.5.2 to read as follows:

## "3.4.5 Marking and Placarding

3.4.5.1 Except for air transport, packages containing dangerous goods in limited quantities shall bear the marking shown below:

Marking for packages containing limited quantities

The marking shall be readily visible, legible and able to withstand open weather exposure without a substantial reduction in effectiveness. The marking shall be in the form of a square set at an angle of 45° (diamond-shaped). The top and bottom portions and the surrounding line shall be black. The centre area shall be white or a suitable contrasting background. The minimum dimensions shall be 100 mm x 100 mm and the minimum width of the line forming the diamond shall be 2 mm. Where dimensions are not specified, all features shall be in approximate proportion to those shown. If the size of the package so requires, the minimum outer dimensions shown above may be reduced to be not less than 50 mm x 50 mm provided the marking remains clearly visible. The minimum width of the line forming the diamond may be reduced to a minimum of 1 mm.

**NOTE:** The provisions of 3.4.5.1 of the IMDG Code amendment 36-12 may continue to be applied until 31 December 2016."

3.4.5.2 Packages containing dangerous goods packed in conformity with the provisions of Part 3, Chapter 4 of the ICAO Technical Instructions for the Transport of Dangerous Goods may bear the marking shown below to certify conformity with these provisions:

Marking for packages containing limited quantities conforming to Part 3, Chapter 4 of the ICAO Technical Instructions for the Safe Transport of Dangerous Goods by Air.

The marking shall be readily visible, legible and able to withstand open weather exposure without a substantial reduction in effectiveness. The marking shall be in the form of a square set at an angle of 45° (diamond-shaped). The top and bottom portions and the surrounding line shall be black. The centre area shall be white or a suitable contrasting background. The minimum dimensions shall be 100 mm x 100 mm and the minimum width of the line forming the diamond shall be 2 mm. The symbol "Y" shall be placed in the centre of the mark and shall be clearly visible. Where dimensions are not specified, all features shall be in approximate proportion to those shown. If the size of the package so requires, the minimum outer dimensions shown above may be reduced to be not less than 50 mm x 50 mm provided the marking remains clearly visible. The minimum width of the line forming the diamond may be reduced to a minimum of 1 mm. The symbol "Y" shall remain in approximate proportion to that shown above.

**Note:** The provisions of 3.4.5.2 of IMDG Code (amendment 36-12) may continue to be applied until 31 December 2016."

#### 3.4.5.3 Amend to read as follows:

## "3.4.5.3 Multimodal recognition of marks

- 3.4.5.3.1 Packages containing dangerous goods bearing the marking shown in 3.4.5.2 with or without the additional labels and markings for air transport shall be deemed to meet the provisions of section 3.4.2 and need not bear the marking shown in 3.4.5.1.
- 3.4.5.3.2 Packages containing dangerous goods in limited quantities bearing the marking shown in 3.4.5.1 and conforming with the provisions of the ICAO Technical Instructions for the Safe Transport of Dangerous Goods by Air, including all necessary marks and labels specified in Parts 5 and 6, shall be deemed to meet the provisions of section 3.4.1 as appropriate and of section 3.4.2."

### 3.4.5.5 Placarding and marking of cargo transport units

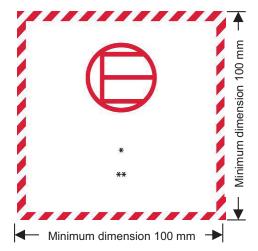

3.4.5.5.3 Delete the existing paragraph and insert "reserve"

### Chapter 3.5 – Dangerous goods packed in excepted quantities

#### 3.5.4 Marking of packages

- 3.5.4.1 Delete the mark and the text below the mark.
- 3.5.4.2 and 3.5.4.3 Amend to read as follows:

"3.5.4.2

Excepted quantities mark

- \* The Class or, when assigned, the Division number(s) shall be shown in this location.
- \*\* The name of the consignor or of the consignee shall be shown in this location if not shown elsewhere on the package.

The marking shall be in the form of a square. The hatching and symbol shall be of the same colour, black or red, on white or suitable contrasting background. The minimum dimensions shall be 100 mm x 100 mm. Where dimensions are not specified, all features shall be in approximate proportion to those shown.

3.5.4.3 An overpack containing dangerous goods in excepted quantities shall display the markings required by 3.5.4.1, unless such markings on packages within the overpack are clearly visible.

**Note:** The provisions of 3.5.4.1 and 3.5.4.2 of the IMDG Code (amendment 36-12) may continue to be applied until 31 December 2016."

### 3.5.7 Stowage

3.5.7.1 In the paragraph, replace the words "column 16" with "column 16a"

#### 3.5.8 Segregation

- **3.5.8.1** In the paragraph, replace the words "column 16" with "column 16b"
- 3.5.8.2 In the paragraph, replace the words "column 16" with "column 16b"

#### Appendix A - List of generic and N.O.S. Proper Shipping Names

Add the following new entries in appendix A under the appropriate class in the general entries section:

| Class or<br>Division | Subsidiary<br>Risk | UN No | Proper Shipping Name                                 |
|----------------------|--------------------|-------|------------------------------------------------------|
| 2.1                  |                    | 3510  | ADSORBED GAS, FLAMMABLE, N.O.S.                      |
| 2.2                  |                    | 3511  | ADSORBED GAS, N.O.S.                                 |
| 2.3                  |                    | 3512  | ADSORBED GAS, TOXIC, N.O.S.                          |
| 2.2                  | 5.1                | 3513  | ADSORBED GAS, OXIDIZING, N.O.S.                      |
| 2.3                  | 2.1                | 3514  | ADSORBED GAS, TOXIC,<br>FLAMMABLE, N.O.S.            |
| 2.3                  | 5.1                | 3515  | ADSORBED GAS, TOXIC, OXIDIZING, N.O.S.               |
| 2.3                  | 8                  | 3516  | ADSORBED GAS, TOXIC,<br>CORROSIVE, N.O.S.            |
| 2.3                  | 2.1 + 8            | 3517  | ADSORBED GAS, TOXIC,<br>FLAMMABLE, CORROSIVE, N.O.S. |
| 2.3                  | 5.1 + 8            | 3518  | ADSORBED GAS, TOXIC, OXIDIZING, CORROSIVE, N.O.S.    |

#### Appendix B - Glossary of terms

Amend the entry for "AIR BAG INFLATORS, PYROTECHNIC or AIR BAG MODULES, PYROTECHNIC or SEAT-BELT PRETENSIONERS, PYROTECHNIC" to read:

"SAFETY DEVICES, electrically initiated".

Amend the definition to read as follows:

"Articles which contain pyrotechnic substances or dangerous goods of other classes and are used in vehicles, vessels or aircraft to enhance safety to persons. Examples are: air bag inflators, air bag modules, seat-belt pretensioners and pyromechanical devices. These pyromechanical devices are assembled components for tasks such as but not limited to separation, locking, or release-and-drive or occupant restraint. The term includes "SAFETY DEVICES, PYROTECHNIC"."

#### Alphabetical index

Amend the following entries as indicated hereunder:

Amend the entries for "AIR BAG INFLATORS, PYROTECHNIC or AIR BAG MODULES, PYROTECHNIC or SEAT-BELT PRETENSIONERS, PYROTECHNIC" to read as follows:

| «Air bag inflators, see       | 1.4G<br>9 | 0503<br>3268» |
|-------------------------------|-----------|---------------|
| «Air bag modules, see         | 1.4G<br>9 | 0503<br>3268» |
| «Seat-belt pretensioners, see | 1.4G<br>9 | 0503<br>3268» |

In the entries for "Actinolite", "Anthophyllite" and "Tremolite" in the UN No. column, replace "2590" with "2212".

Delete the entries for "Asbestos, blue or brown", "Asbestos, white", "Chryosotile", , "BLUE ASBESTOS (crocidolite)", "BROWN ASBESTOS (amosite, mysorite)", "WHITE ASBESTOS (chrysotile, actinolite, anthophyllite, tremolite)". (delete entries regardless names in the UN Regulations differs from those in the IMDG Code)

In the entry for "TRIFLUOROCHLOROETHYLENE, STABILIZED" UN No. 1082, add at the end "(REFRIGERANT GAS R 1113)".

In the entry for "AMMONIUM NITRATE", (UN 1942), amend the description to read as follows "AMMONIUM NITRATE with not more than 0.2% combustible substances, including any organic substance calculated as carbon, to the exclusion of any other added substance".

In the entry for "AMMONIUM NITRATE", (UN 0222), amend the description to read as follows "AMMONIUM NITRATE".

In the entry for "CAPACITOR, electric double layer..." (UN 3499), amend the description to read as follows: "CAPACITOR, ELECTRIC DOUBLE LAYER (with an energy storage capacity greater than 0.3Wh)".

Drazoxolon: Replace "see PESTICIDE, N.O.S." with "see ORGANOCHLORINE PESTICIDE".

Kelevan: Replace "see PESTICIDE, N.O.S." with "see ORGANOCHLORINE PESTICIDE".

Nabam: Replace "see THIOCARBAMATE PESTICIDE" with "see Note 1".

Oxamyl: Replace "see PESTICIDE, N.O.S." with "see CARBAMATE PESTICIDE".

In the entry for "AMMONIA, ANHYDROUS", UN (1005), insert "P" in the column for MP.

In the entries for "ALLYL ALCOHOL" and "Propenyl alcohol", UN (1098), insert "P" in the column for MP.

In the entry for "HEPTANES", UN (1206), insert "P" in the column for MP.

MSC 93/22/Add.2 Annex 8, page 154

In the entries for "Hexane" and "2-Methylpentane", UN (1208), insert "P" in the column for MP.

In the entries for "Isooctane", "2-Methylheptane", "OCTANES" and "2,2,4-Trimethylpentane", UN (1262), insert "P" in the column for MP.

In the entry for "PINE OIL", UN (1272), insert "P" in the column for MP.

In the entry for "TURPENTINE", UN (1299), insert "P" in the column for MP.

In the entries for "Creosote salts", "NAPHTHALENE, CRUDE" and "NAPHTHALENE, REFINED", UN (1334), insert "P" in the column for MP.

In the entries for "Aminobenzene", "ANILINE", "Aniline oil" and "Phenylamine", UN (1547), insert "P" in the column for MP.

In the entries for "Methyldinitrobenzenes, molten" and "DINITROTOLUENES, MOLTEN", UN (1600), insert "P" in the column for MP.

In the entry for "TOLUIDINES, LIQUID", UN (1708), insert "P" in the column for MP.

In the entries for "CALCIUM HYPOCHLORITE, DRY with more than 39% available chlorine (8.8% available oxygen)" and "CALCIUM HYPOCHLORITE MIXTURE, DRY with more than 39% available chlorine (8.8% available oxygen", UN (1748), insert "P" in the column for MP.

In the entry for "Sodium hypochlorite solution", UN (1791), insert "P" in the column for MP.

In the entry for "ZINC CHLORIDE SOLUTION", UN (1840), insert "P" in the column for MP.

In the entry for "NONANES", UN (1920), insert "P" in the column for MP.

Insert a new entry "2,4-Dichlorophenol,see," in the column for Substance, material or article, "P" in the column for MP, "6.1" in the column for Class, "2020" in the column for UN No..

In the entry for "DINITROTOLUENES, LIQUID" and "Methyldinitrobenzenes, liquid", UN (2038), insert "P" in the column for MP.

Insert a new entry "1,3-Dichloropropene, see" in the column for Substance, material or article, "P" in the column for MP, "3" in the column for Class, "2047" in the column for UN No.

In the entry for "AMMONIA SOLUTION relative density less than 0.880 at  $15^{\circ}$ C in water, with more than 35% but not more than 50% ammonia", UN (2073), insert "P" in the column for MP.

In the entries for "Bleaching powder" and "CALCIUM HYPOCHLORITE MIXTURE, DRY with more than 10% but not more than 39% available chlorine", UN (2208), insert "P" in the column for MP.

In the entries for "Propenoic acid, stabilized", "Acroleic acid, stabilized" and "ACRYLIC ACID, STABILIZED", UN (2218), insert "P" in the column for MP.

MSC 93/22/Add.2 Annex 8, page 155

In the entries for "meta-Chlorotoluene" and "para-Chlorotoluene", delete "P", and in the entry for "ortho-Chlorotoluene", UN (2238) insert "P" in the column for MP.

In the entry for "CYCLOHEPTANE", UN (2241), insert "P" in the column for MP.

In the entry for "NAPHTHALENE, MOLTEN", UN (2304), insert "P" in the column for MP.

In the entries for "1,3,5-TRIMETHYLBENZENE" and "Mesitylene", UN (2325), insert "P" in the column for MP.

In the entry for "ZINC CHLORIDE, ANHYDROUS", UN (2331), insert "P" in the column for MP.

In the entry for "alpha-PINENE", UN (2368), insert "P" in the column for MP.

In the entries for "DIMETHYL DISULPHIDE", "Methyl disulphide" and "Methyldithiomethane", UN (2381), insert "P" in the column for MP.

In the entry for "AMMONIA SOLUTION relative density between 0.880 and 0.957 at 15°C in water, with more than 10% but not more than 35% ammonia, by mass", UN (2672), insert "P" in the column for MP.

In the entries for "BUTYLBENZENES", "Isobutylbenzene", "2-Methyl-2-phenylpropane", "1-Phenylbutane" and "2-Phenylbutane", UN (2709), insert "P" in the column for MP.

In the entries for "Dodecene", "PROPYLENE TETRAMER" and "Tetrapropylene", UN (2850), insert "P" in the column for MP.

In the entries for "CALCIUM HYPOCHLORITE, HYDRATED with not less than 5.5% but not more than 16% water" and "CALCIUM HYPOCHLORITE, HYDRATED MIXTURE with not less than 5.5% but not more than 16% water", UN (2880), insert "P" in the column for MP.

In the entry for "AMMONIA SOLUTION relative density less than 0.880 at  $15^{\circ}$  C in water, with more than 50% ammonia", UN (3318), insert "P" in the column for MP.

In the entry for "TOLUIDINES, SOLID", UN (3451), insert "P" in the column for MP.

In the entries for "DINITROTOLUENES, SOLID" and "Methyldinitrobenzenes, solid", UN (3454), insert "P" in the column for MP.

In the entry for "CALCIUM HYPOCHLORITE MIXTURE, DRY, CORROSIVE with more than 39% available chlorine (8.8% available oxygen)", UN (3485), insert "P" in the column for MP.

In the entry for "CALCIUM HYPOCHLORITE MIXTURE, DRY, CORROSIVE with more than 10% but not more than 39% available chlorine", UN (3486), insert "P" in the column for MP.

In the entries for "CALCIUM HYPOCHLORITE, HYDRATED MIXTURE, CORROSIVE with not less than 5.5% but not more than 16% water" and "CALCIUM HYPOCHLORITE, HYDRATED, CORROSIVE with not less than 5.5% but not more than 16% water", UN (3487), insert "P" in the column for MP.

MSC 93/22/Add.2 Annex 8, page 156

Add the following new entries in alphabetical order:

| Name and description                                                                 | Class | UN No. |
|--------------------------------------------------------------------------------------|-------|--------|
| ADSORBED GAS,<br>FLAMMABLE, N.O.S.                                                   | 2.1   | 3510   |
| ADSORBED GAS, N.O.S.                                                                 | 2.2   | 3511   |
| ADSORBED GAS,<br>OXIDIZING, N.O.S.                                                   | 2.2   | 3513   |
| ADSORBED GAS,<br>TOXIC, CORROSIVE,<br>N.O.S.                                         | 2.3   | 3516   |
| ADSORBED GAS,<br>TOXIC, FLAMMABLE,<br>CORROSIVE, N.O.S.                              | 2.3   | 3517   |
| ADSORBED GAS,<br>TOXIC, FLAMMABLE,<br>N.O.S.                                         | 2.3   | 3514   |
| ADSORBED GAS,<br>TOXIC, N.O.S.                                                       | 2.3   | 3512   |
| ADSORBED GAS,<br>TOXIC, OXIDIZING,<br>CORROSIVE, N.O.S.                              | 2.3   | 3518   |

### PART 4 PACKING AND TANK PROVISIONS

Chapter 4.1 – Use of packagings, including intermediate bulk containers (IBCs) and large packagings

- 4.1.1 General provisions for the packing of dangerous goods in packagings, including IBCs and large packagings
- 4.1.1.3 In paragraph 4.1.1.3, in the third line, the reference "6.3.2" is replaced with "6.3.5".
- 4.1.1.5.2 Insert a new 4.1.1.5.2 to read as follows:
  - "4.1.1.5.2 Use of supplementary packagings within an outer packaging (e.g. an intermediate packaging or a receptacle inside a required inner packaging) additional to what is required by the packing instructions is authorized provided all relevant requirements are met, including those of 4.1.1.3, and, if appropriate, suitable cushioning is used to prevent movement within the packaging."

and the remaining paragraphs are renumbered accordingly.

#### 4.1.4 List of packing instructions

### 4.1.4.1 Packing instructions concerning the use of packagings (except IBCs and large packagings)

P001 Insert a new last sentence in subparagraph (a) of PP1 as follows

"On roll-on/roll-off ships the unit loads may be carried in vehicles other than closed vehicles provided they are securely fenced to the full height of the cargo carried;"

P003 Add a new special packing provision PP91 to read as follows:

"PP91 For UN 1044, large fire extinguishers may also be transported unpackaged provided that the requirements of 4.1.3.8.1.1 to 4.1.3.8.1.5 are met, the valves are protected by one of the methods in accordance with 4.1.6.1.8.1 to 4.1.6.1.8.4 and other equipment mounted on the fire extinguisher is protected to prevent accidental activation. For the purpose of this special packing provision, "large fire extinguishers" means fire extinguishers as described in subparagraphs .3 to .5 of special provision 225 of Chapter 3.3."

P114(a) Under Outer Packagings, Drums: Before "fibre (1G)" insert "plywood (1D)".

P116 In the column for "outer packagings", amend the first entry for "bags" to read: "woven plastics (5H1, 5H2, 5H3)". Amend special packing provision PP65 to read: "Deleted".

P131 and P137 In the entry for "boxes", in the column for "outer packagings" add: "plastics, solid (4H2)".

#### P404 (1) Amend to read as follows:

(1) Combination packagings

Outer packagings: (1A1, 1A2, 1B1, 1B2, 1N1, 1N2, 1H1, 1H2, 1D, 1G, 4A, 4B, 4N, 4C1,

4C2, 4D, 4F, 4G or 4H2)

**Inner packagings:** Metal receptacles with a maximum net mass of 15 kg each.

Inner packagings shall be hermetically sealed and have threaded

closures:

Glass receptacles, with a maximum net mass of 1 kg each, having threaded closures with gaskets, cushioned on all sides and contained in

hermetically sealed metal cans.

Outer packagings shall have a maximum net mass of 125 kg.

P501, P502 and P504 Amend the last entry under "Composite packaging" to read as follows:

"Glass receptacle in steel, aluminium, fibre or plywood drum (6PA1, 6PB1, 6PD1 or 6PG1) or in a steel, aluminium, wood or fibreboard box or in wickerwork hamper (6PA2, 6PB2, 6PC, 6PG2 or 6PD2) or in solid or expanded plastics packaging (6PH1 or 6PH2)."

P601 (2) and P602 (2) At the beginning, insert "or plastics" after "consisting of metal".

P650 Amend the diagram in paragraph (4) to read as follows:

#### P802 (3) Amend to read as follows:

"(3) Composite packagings: Glass receptacle in steel, aluminium or plywood drum (6PA1, 6PB1 or 6PD1) or in a steel, aluminium or wood box or in wickerwork hamper (6PA2, 6PB2, 6PC or 6PD2) or in solid plastics packaging (6PH2); maximum capacity: 60 litres."

P901 After "(see 3.3.1, special provision 251)", insert the following new sentence: "Where the kit contains only dangerous goods to which no packing group is assigned, packagings shall meet Packing Group II performance level."

P903 In paragraph (2), replace subparagraphs (a) and (b) with the following subparagraphs (a) to (c):

- "(a) Strong outer packagings;
- (b) Protective enclosures (e.g. fully enclosed or wooden slatted crates); or
- (c) Pallets or other handling devices."

P904 Amend the diagram to read as follows:

#### P906 (2) Amend to read as follows:

"(2) For transformers and condensers and other devices:

MSC 93/22/Add.2 Annex 8, page 160

- (a) Packagings in accordance with packing instructions P001 or P002. The articles shall be secured with suitable cushioning material to prevent inadvertent movement during normal conditions of transport; or
- (b) Leakproof packagings which are capable of containing, in addition to the devices, at least 1.25 times the volume of the liquid PCBs, polyhalogenated biphenyls or terphenyls present in them. There shall be sufficient absorbent material in the packagings to absorb at least 1.1 times the volume of liquid which is contained in the devices. In general, transformers and condensers shall be carried in leakproof metal packagings which are capable of holding, in addition to the transformers and condensers, at least 1.25 times the volume of the liquid present in them."

Insert the following new packing instructions:

MSC 93/22/Add.2 Annex 8, page 161

P208 PACKING INSTRUCTION P208

This instruction applies to Class 2 adsorbed gases.

- (1) The following packagings are authorized provided the general packing requirements of 4.1.6.1 are met:
  - Cylinders specified in Chapter 6.2 and in accordance with ISO 11513:2011 or ISO 9809-1:2010.
- (2) The pressure of each filled cylinder shall be less than 101.3 kPa at 20°C and less than 300 kPa at 50°C.
- (3) The minimum test pressure of the cylinder shall be 21 bar.
- (4) The minimum burst pressure of the cylinder shall be 94.5 bar.
- (5) The internal pressure at 65°C of the filled cylinder shall not exceed the test pressure of the cylinder.
- (6) The adsorbent material shall be compatible with the cylinder and shall not form harmful or dangerous compounds with the gas to be adsorbed. The gas in combination with the adsorbent material shall not affect or weaken the cylinder or cause a dangerous reaction (e.g. a catalyzing reaction).
- (7) The quality of the adsorbent material shall be verified at the time of each fill to assure the pressure and chemical stability requirements of this packing instruction are met each time an adsorbed gas package is offered for transport.
- (8) The adsorbent material shall not meet the criteria of any of the Classes or Divisions in this Code.
- (9) Requirements for cylinders and closures containing toxic gases with an LC<sub>50</sub> less than or equal to 200 ml/m³ (ppm) (see table 1) shall be as follows:
  - (a) Valve outlets shall be fitted with pressure retaining gas-tight plugs or caps having threads matching those of the valve outlets.
  - (b) Each valve shall either be of the packless type with non-perforated diaphragm, or be of a type which prevents leakage through or past the packing.
  - (c) Each cylinder and closure shall be tested for leakage after filling.
  - (d) Each valve shall be capable of withstanding the test pressure of the cylinder and be directly connected to the cylinder by either a taper-thread or other means which meets the requirements of ISO 10692-2:2001.
  - (e) Cylinders and valves shall not be fitted with a pressure relief device.
- (10) Valve outlets for cylinders containing pyrophoric gases shall be fitted with gas-tight plugs or caps having threads matching those of the valve outlets.
- (11) The filling procedure shall be in accordance with Annex A of ISO 11513:2011.
- (12) The maximum period for periodic inspections shall be 5 years.
- (13) Special packing provisions that are specific to a substance (see table 1).

Material compatibility

- a: Aluminum alloy cylinders shall not be used.
- d: When steel cylinders are used, only those bearing the "H" mark in accordance with 6.2.2.7.4 (p) are permitted.

Gas specific provisions

r: The filling ratio of this gas shall be limited such that, if complete decomposition occurs, the pressure does not exceed two thirds of the test pressure of the cylinder.

Material Compatibility for N.O.S Adsorbed Gas Entries

z: The construction materials of the cylinders and their accessories shall be compatible with the contents and shall not react to form harmful or dangerous compounds therewith.

MSC 93/22/Add.2 Annex 8, page 162

| P805 | PACKING INSTRUCTION | P805 |
|------|---------------------|------|
|      |                     |      |

This instruction applies to UN 3507.

The following packagings are authorized provided that the general provisions of **4.1.1** and **4.1.3** and the special packing provisions of **4.1.9.1.2**, **4.1.9.1.4** and **4.1.9.1.7** are met:

Packagings consisting of:

- (a) Metal or plastics primary receptacle(s); in
- (b) Leakproof rigid secondary packaging(s); in
- (c) A rigid outer packaging:

Drums (1A2, 1B2, 1N2, 1H2, 1D, 1G);

Boxes (4A, 4B, 4C1, 4C2, 4D, 4F, 4G, 4H1, 4H2);

Jerricans (3A2, 3B2, 3H2).

#### Additional requirements:

1. Primary inner receptacles shall be packed in secondary packagings in a way that, under normal conditions of transport, they cannot break, be punctured or leak their contents into the secondary packaging. Secondary packagings shall be secured in outer packagings with suitable cushioning material to prevent movement. If multiple primary receptacles are placed in a single secondary packaging, they shall be either individually wrapped or separated so as to prevent contact between them.

| In the | n the case of fissile-excepted material, limits specified in 2.7.2.3.5 and 6.4.11.2 shall be met. |      |  |

#### P908 PACKING INSTRUCTION P908

This instruction applies to UN Nos. 3090, 3091, 3480 and 3481.

The following packagings are authorized for damaged or defective lithium ion cells and batteries and lithium metal cells and batteries including those contained in equipment, provided the general provisions of 4.1.1 and 4.1.3 are met:

For cells and batteries and equipment containing cells and batteries:

Drums (1A2, 1B2, 1N2, 1H2, 1D, 1G)
Boxes (4A, 4B, 4N, 4C1, 4C2, 4D, 4F, 4G, 4H1, 4H2)
Jerricans (3A2, 3B2, 3H2)

Packagings shall conform to the packing group II performance level.

- Each cell or battery or equipment containing such cells or batteries shall be individually
  packed in inner packaging and placed inside of an outer packaging. The inner packaging or
  outer packaging shall be leak-proof to prevent the potential release of electrolyte.
- 2. Each inner packaging shall be surrounded by sufficient non-combustible and non-conductive thermal insulation material to protect against a dangerous evolution of heat.
- 3. Sealed packagings shall be fitted with a venting device when appropriate.
- 4. Appropriate measures shall be taken to minimize the effects of vibrations and shocks, prevent movement of the cells or batteries within the package that may lead to further damage and a dangerous condition during transport. Cushioning material that is non-combustible and non-conductive may also be used to meet this requirement.
- Non combustibility shall be assessed according to a standard recognized in the country where the packaging is designed or manufactured.

For leaking cells or batteries, sufficient inert absorbent material shall be added to the inner or outer packaging to absorb any release of electrolyte.

A cell or battery with a net mass of more than 30 kg shall be limited to one cell or battery per outer packaging.

#### Additional requirements:

Cells or batteries shall be protected against short circuit.

MSC 93/22/Add.2 Annex 8, page 165

P909 PACKING INSTRUCTION P909

This instruction applies to UN Nos. 3090, 3091, 3480 and 3481 transported for disposal or recycling, either packed together with or packed without non-lithium batteries:

- (1) Cells and batteries shall be packed in accordance with the following:
  - (a) The following packagings are authorized, provided that the general provisions of 4.1.1 and 4.1.3, are met:

Drums (1A2, 1B2, 1N2, 1H2, 1D, 1G); Boxes (4A, 4B, 4N, 4C1, 4C2, 4D, 4F, 4G, 4H2); and Jerricans (3A2, 3B2, 3H2).

- (b) Packagings shall conform to the packing group II performance level.
- (c) Metal packagings shall be fitted with a non-conductive lining material (e.g. plastics) of adequate strength for the intended use.
- (2) However, lithium ion cells with a Watt-hour rating of not more than 20 Wh, lithium ion batteries with a Watt-hour rating of not more than 100 Wh, lithium metal cells with a lithium content of not more than 1 g and lithium metal batteries with an aggregate lithium content of not more than 2 g may be packed in accordance with the following:
  - (a) In strong outer packaging up to 30 kg gross mass meeting the general provisions of 4.1.1, except 4.1.1.3, and 4.1.3.
  - (b) Metal packagings shall be fitted with a non-conductive lining material (e.g. plastics) of adequate strength for the intended use.
- (3) For cells or batteries contained in equipment, strong outer packagings constructed of suitable material, and of adequate strength and design in relation to the packaging capacity and its intended use, may be used. Packagings need not meet the requirements of 4.1.1.3. Large equipment may be offered for transport unpackaged or on pallets when the cells or batteries are afforded equivalent protection by the equipment in which they are contained.
- (4) In addition, for cells or batteries with a gross mass of 12 kg or more employing a strong, impact resistant outer casing, strong outer packagings constructed of suitable material and of adequate strength and design in relation to the packagings capacity and its intended use, may be used. Packagings need not meet the requirements of 4.1.1.3.

#### Additional requirements:

- 1. Cells and batteries shall be designed or packed to prevent short circuits and the dangerous evolution of heat.
- 2. Protection against short circuits and the dangerous evolution of heat includes, but is not limited to:
  - -individual protection of the battery terminals,
  - -inner packaging to prevent contact between cells and batteries,
  - -batteries with recessed terminals designed to protect against short circuits, or
  - -the use of a non-conductive and non-combustible cushioning material to fill empty space between the cells or batteries in the packaging.
- 3. Cells and batteries shall be secured within the outer packaging to prevent excessive movement during transport (e.g. by using a non-combustible and non-conductive cushioning material or through the use of a tightly closed plastics bag).

#### 4.1.4.2 Packing instructions concerning the use of IBCs

In IBC02, insert the following new special provision B16:

"B16 For UN 3375, IBCs of type 31A and 31N are not allowed without competent authority approval."

In IBC04, replace "and 21N" with ", 21N, 31A, 31B and 31N".

#### (adopted on 22 May 2014) AMENDMENTS TO THE INTERNATIONAL MARITIME DANGEROUS GOODS (IMDG) CODE

MSC 93/22/Add.2 Annex 8, page 166

In IBC05 (1), replace "and 21N" with ", 21N, 31A, 31B and 31N".

In IBC05 (2), replace "and 21H2" with ", 21H2, 31H1 and 31H2".

In IBC05 (3), replace "and 21HZ1" with ", 21HZ1 and 31HZ1".

In IBC06 (1), IBC07 (1) and IBC08 (1), replace "and 21N" with ", 21N, 31A, 31B and 31N".

In IBC06 (2), IBC07 (2) and IBC08 (2), replace "and 21H2" with ", 21H2, 31H1 and 31H2".

In IBC06 (3), IBC07 (3) and IBC08 (3), replace "and 21HZ2" with "21HZ2 and 31HZ1".

IBC100, in the first line of packing instruction IBC100, insert "0222" after "0082". Insert the following special packing provisions:

- "B2 For UN No. 0222 in IBCs other than metal or rigid plastics IBCs, the IBCs shall be transported in closed cargo transport units."
- "B3 For UN No. 0222, flexible IBCs shall be sift-proof and water resistant or shall be fitted with a sift-proof and water resistant liner."
- "B17 For UN No. 0222, metal IBCs are not authorized."

#### 4.1.4.3 Special packing instructions concerning the use of large packagings

Insert the following new packing instructions:

#### PACKING INSTRUCTION LP903 LP903 This instruction applies to UN Nos. 3090, 3091, 3480 and 3481

The following large packagings are authorized for a single battery, including for a battery contained in equipment, provided that the general provisions of 4.1.1 and 4.1.3 are met:

Rigid large packagings conforming to the packing group II performance level, made of:

steel (50A);

aluminium (50B);

metal other than steel or aluminium (50N);

rigid plastics (50H);

natural wood (50C);

plywood (50D);

reconstituted wood (50F);

rigid fibreboard (50G).

The battery shall be packed so that the battery is protected against damage that may be caused by its movement or placement within the large packaging.

#### Additional requirement:

Batteries shall be protected against short circuit.

MSC 93/22/Add.2 Annex 8, page 167

LP904 PACKING INSTRUCTION LP904

This instruction applies to UN Nos. 3090, 3091, 3480 and 3481

The following large packagings are authorized for a single damaged or defective battery and for a single damaged or defective battery contained in equipment, provided the general provisions of 4.1.1 and 4.1.3 are met

For batteries and equipment containing batteries:

steel (50A) aluminium (50B) metal other than steel or aluminium (50N) rigid plastics (50H) plywood (50D)

Packagings shall conform to the packing group II performance level.

- 1. Each battery or equipment containing such battery shall be individually packed in an inner packaging and placed inside of an outer packaging. The inner packaging or outer packaging shall be leak-proof to prevent the potential release of electrolyte.
- 2. Each inner packaging shall be surrounded by sufficient non-combustible and non-conductive thermal insulation material to protect against a dangerous evolution of heat.
- 3. Sealed packagings shall be fitted with a venting device when appropriate.
- 4. Appropriate measures shall be taken to minimize the effects of vibrations and shocks, prevent movement of the battery within the package that may lead to further damage and a dangerous condition during transport. Cushioning material that is non-combustible and non-conductive may also be used to meet this requirement.
- 5. Non combustibility shall be assessed according to a standard recognized in the country where the packaging is designed or manufactured.

For leaking batteries, sufficient inert absorbent material shall be added to the inner or outer packaging to absorb any release of electrolyte.

#### Additional requirements:

Batteries shall be protected against short circuit.

#### 4.1.6 Special packing provisions for goods of class 2

#### 4.1.6.1 General provisions

4.1.6.1.2 Replace "ISO 11114-1:1997" with "ISO 11114-1:2012".

#### 4.1.9 Special packing provisions for class 7

#### 4.1.9.1 General

- 4.1.9 Amend the title to read "Special packing provisions for radioactive material"
- 4.1.9.1.3 Delete ", other than an excepted package,".
- 4.1.9.1.6 Amend the introductory sentence to read as follows:

"Before a packaging is first used to transport radioactive material, it shall be confirmed that it has been manufactured in conformity with the design specifications to ensure compliance with the relevant provisions of is Code and any applicable certificate of approval. The following requirements shall also be fulfilled, if applicable:".

MSC 93/22/Add.2 Annex 8, page 168

In subparagraph .1, replace "package" with "packaging".

In subparagraph .2, amend the beginning of the sentence to read as follows:

"For each packaging intended for use as a Type B(U), Type B(M) or Type C package and for each packaging intended to contain fissile material ...".

In subparagraph.3, amend the text to read as follows:

- ".3 For each packaging intended to contain fissile material, it shall be ensured that the effectiveness of the criticality safety features is within the limits applicable to or specified for the design and in particular where, in order to comply with the requirements of 6.4.11.1 neutron poisons are specifically included, checks shall be performed to confirm the presence and distribution of those neutron poisons."
- 4.1.9.1.7 Insert a new paragraph to read as follows:
  - "4.1.9.1.7 Before each shipment of any package, it shall be ensured that the package contains neither:
    - .1 Radionuclides different from those specified for the package design; nor
    - .2 Contents in a form, or physical or chemical state different from those specified for the package design."

Current paragraphs 4.1.9.1.7 to 4.1.9.1.11 become new paragraphs 4.1.9.1.8 to 4.1.9.1.12.

- 4.1.9.1.8 (former 4.1.9.1.7) Amend to read as follows:
  - "4.1.9.1.8 Before each shipment of any package, it shall be ensured that all the requirements specified in the relevant provisions of this Code and in the applicable certificates of approval have been fulfilled. The following requirements shall also be fulfilled, if applicable:
    - .1 It shall be ensured that lifting attachments which do not meet the requirements of 6.4.2.2 have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with 6.4.2.3:
    - 2 Each Type B(U), Type B(M) and Type C package shall be held until equilibrium conditions have been approached closely enough to demonstrate compliance with the requirements for temperature and pressure unless an exemption from these requirements has received unilateral approval;
    - .3 For each Type B(U), Type B(M) and Type C package, it shall be ensured by inspection and/or appropriate tests that all closures, valves and other openings of the containment system through which the radioactive contents might escape are properly closed and, where appropriate, sealed in the manner for which the demonstrations of compliance with the requirements of 6.4.8.8 and 6.4.10.3 were made;

.4 For packages containing fissile material the measurement specified in 6.4.11.5 (b) and the tests to demonstrate closure of each package as specified in 6.4.11.8 shall be performed."

#### 4.1.9.2 Provisions and controls for transport of LSA material and SCO

- 4.1.9.2.2 Amend to read as follows:
  - "4.1.9.2.2 For LSA material and SCO which are or contain fissile material, which is not excepted under 2.7.2.3.5, the applicable requirements of 7.1.4.5.15 and 7.1.4.5.16 shall be met."
- 4.1.9.2.3 Insert a new paragraph 4.1.9.2.3 to read as follows:
  - "4.1.9.2.3 For LSA material and SCO which are or contain fissile material, the applicable requirements of 6.4.11.1 shall be met."

and current paragraphs 4.1.9.2.3 and 4.1.9.2.4 become new paragraphs 4.1.9.2.4 and 4.1.9.2.5 respectively. Table 4.1.9.2.4 is renumbered as 4.1.9.2.5.

4.1.9.2.4 (former 4.1.9.2.3) In .2, delete "and" at the end.

Add a new subparagraph .4 to read as follows:

- ".4 Unpackaged fissile material shall meet the requirements of 2.7.2.3.5.5"
- 4.1.9.2.5 (former 4.1.9.2.4) Replace "4.1.9.2.3" with "4.1.9.2.4" and "table 4.1.9.2.4" with "table 4.1.9.2.5".

Table 4.1.9.2.5 In note "a" under the table replace "4.1.9.2.3" with "4.1.9.2.4".

- 4.1.9.3 Packages containing fissile material
- 4.1.9.3 Amend to read as follows:
  - "4.1.9.3 The contents of packages containing fissile material shall be as specified for the package design either directly in the provisions of this Code or in the certificate of approval."

#### Chapter 4.2 – Use of portable tanks and multiple-element gas containers (MEGCs)

#### 4.2.5 Portable tank instructions and special provisions

#### 4.2.5.2.6 Portable tank instructions

4.2.5.2.6 Amend the header to the tabulated portable tank instructions for T1 – T22 to read as follows:

"These portable tank instructions apply to liquid and solid substances of Class 1 and Classes 3 to 9. The general provisions of section 4.2.1 and the requirements of section 6.7.2 shall be met."

4.2.5.2.6 In tank instruction T23, at the end of footnote § add: ""CORROSIVE" subsidiary risk placard required (Model No 8, see 5.2.2.2.2)."

- 4.2.5.3 Portable tank special provisions
- 4.2.5.3 In special provision TP32, paragraph (b), at the beginning, insert "For UN 3375 only,".
- 4.2.5.3 Add the following new portable tank special provision:

"TP41 The 2.5 year internal examination may be waived or substituted by other test methods or inspection procedures specified by the competent authority or its authorized body, provided that the portable tank is dedicated to the transport of the organometallic substances to which this tank special provision is assigned. However this examination is required when the conditions of 6.7.2.19.7 are met."

### PART 5 CONSIGNMENT PROCEDURES

#### Chapter 5.1 – General provisions

- 5.1.2 Use of overpacks and unit loads
- 5.1.2.1 Add the following new sentence and note at the end:

"The lettering of the "OVERPACK" marking shall be at least 12 mm high.

**Note:** The size requirement for the "OVERPACK" marking shall apply as from 1 January 2016."

- 5.1.3 Empty uncleaned packagings or units
- 5.1.3.2 Replace "Packagings, including IBCs, and tanks" with "Freight containers, tanks, IBCs, as well as other packagings and overpacks,".
- 5.1.5 General provisions for class 7
- 5.1.5.1 Approval of shipments and notification
- 5.1.5.1.1 General
- 5.1.5.1.1 In the first sentence replace "for package designs" with "of package designs".
- 5.1.5.1.2 Shipment approvals
- 5.1.5.1.2 In subparagraph .4 replace "according to" with "in accordance with".
- 5.1.5.1.4 Notifications
- 5.1.5.1.4 In subparagraph .3 replace "for shipment approval" with "for approval of shipment (see 6.4.23.2)".
- 5.1.5.2 Certificates issued by competent authority

- 5.1.5.2.1 In .1, insert a new subparagraph .3 to read as follows:
  - ".3 fissile material excepted under 2.7.2.3.5.6;".

and consequently, current subparagraphs .3 to .6 are renumbered as .4 to .7.

- 5.1.5.2.1 In subparagraph .5 (former .4) delete "all" and "replace "6.4.11.2" with "2.7.2.3.5, 6.4.11.2 or 6.4.11.3".
- 5.1.5.2.1 Insert new .4 and .5 to read as follows:
  - ".4 Determination of the basic radionuclide values referred to in 2.7.2.2.1 for individual radionuclides which are not listed in table 2.7.2.2.1 (see 2.7.2.2.2.1);
  - .5 Alternative activity limits for an exempt consignment of instruments or articles (see 2.7.2.2.2.2);.
- 5.1.5.2.1 Amend the second paragraph after subparagraphs .1 to .5 to read as follows:

"The certificates of approval for the package design and the shipment may be combined into a single certificate."

5.1.5.2.3 In the first sentence, amend the beginning of the sentence to read:

"For package designs where it is not required that a competent authority issue a certificate of approval, the consignor ..."

- 5.1.5.3 Determination of transport index (TI) and criticality safety index (CSI)
- 5.1.5.3.4 In the first sentence, replace "and overpacks" with ", overpacks and freight containers".

In subparagraph .1, replace (twice) "or overpack" with ", overpack or freight container".

In subparagraph.5, insert "or freight container" after "overpack".

In the table in 5.1.5.3.4, replace "and overpacks" with ", overpacks and freight containers" and in note "b" to the table insert at end "except for freight containers (see table 7.1.4.5.3)".

- 5.1.5.3.5 Replace "design or shipment approval" with "approval of design or shipment".
- 5.1.5.4 Specific provisions for excepted packages
- 5.1.5.4 Amend the title to read "Specific provisions for excepted packages of radioactive material of Class 7".
- 5.1.5.4.1 After "excepted packages", insert "of radioactive material of Class 7".

#### 5.1.5.4.2 Amend to read as follows:

- "5.1.5.4.2 The documentation requirements of Chapter 5.4 do not apply to excepted packages of radioactive material of Class 7, except that:
  - .1 The UN number preceded by the letters "UN" and the name and address of the consignor and the consignee and, if relevant, the identification mark for each competent authority certificate of approval (see 5.4.1.5.7.1 7.) shall be shown on a transport document such as a bill of lading, air waybill or other similar document complying with the requirements of 5.4.1.2.1 to 5.4.1.2.4;
  - .2 The requirements of 5.4.1.6.2 and, if relevant, those of 5.4.1.5.7.1.7, 5.4.1.5.7.3 and 5.4.1.5.7.4 shall apply;
  - .3 The requirements of 5.4.2 and 5.4.4 shall apply."
- 5.1.5.4.3 Insert a new paragraph to read as follows:

"5.1.5.4.3 The requirements of 5.2.1.5.8 and 5.2.2.1.12.5 shall apply if relevant."

#### 5.1.5.5 Specific provisions for the consignment of fissile material

Insert a new section 5.1.5.5 as follows:

#### "5.1.5.5 Specific provisions for the consignment of fissile material

Fissile material meeting one of the provisions of 2.7.2.3.5.1 to 2.7.2.3.5.6 shall meet the following requirements:

- .1 Only one of the provisions of 2.7.2.3.5.1 to 2.7.2.3.5.6 is allowed per consignment;
- .2 Only one approved fissile material in packages classified in accordance with 2.7.2.3.5.6 is allowed per consignment unless multiple materials are authorized in the certificate of approval;
- .3 Fissile material in packages classified in accordance with 2.7.2.3.5.3 shall be transported in a consignment with no more than 45 g of fissile nuclides;
- .4 Fissile material in packages classified in accordance with 2.7.2.3.5.4 shall be transported in a consignment with no more than 15 g of fissile nuclides:
- .5 Unpackaged or packaged fissile material classified in accordance with 2.7.2.3.5.5 shall be transported under exclusive use on a conveyance with no more than 45 g of fissile nuclides."

#### Chapter 5.2 - Marking and labelling of packages including IBCs

#### 5.2.1 Marking of packages including IBCs

5.2.1.1 Amend the second sentence to read as follows:

"The UN number and the letters "UN" shall be at least 12 mm high, except for packages of 30 litres capacity or less or of 30 kg maximum net mass and for cylinders of 60 litres water capacity when they shall be at least 6 mm in height and except for packages of 5 litres or 5 kg or less when they shall be of an appropriate size."

5.2.1.3 Add the following new sentence and note at the end:

"The lettering of the "SALVAGE" marking shall be at least 12 mm high.

**NOTE:** The size requirement for the "SALVAGE" marking shall apply as from 1 January 2016."

- 5.2.1.5 Special marking provisions for class 7
- 5.2.1.5 Replace "for Class 7" with "for radioactive material".
- 5.2.1.5.1 Insert the following sentence at the end:

"Each overpack shall be legibly and durably marked on the outside of the overpack with an identification of either the consignor or consignee, or both unless these markings of all packages within the overpack are clearly visible."

- 5.2.1.5.2 After "excepted packages" insert "of radioactive material of Class 7".
- 5.2.1.5.5 Amend the introductory sentence to read as follows:

"Each package which conforms to a design approved under one or more of paragraphs 5.1.5.2.1, 6.4.22.1 to 6.4.22.4, 6.4.23.4 to 6.4.23.7 and 6.4.24.2 shall be legibly and durably marked on the outside of the package with the following information:"

- 5.2.1.5.5 Amend .3 to read as follows:
  - ".3 "Type B(U)", "Type B(M)" or "Type C", in the case of a Type B(U), Type B(M) or Type C package design"
- 5.2.1.5.5 Delete subparagraph 4.
- 5.2.1.5.7 Replace "4.1.9.2.3" with "4.1.9.2.4".
- 5.2.1.5.8 Replace "competent authority design or shipment approval" with "competent authority approval of design or shipment".
- 5.2.1.6 Special marking provisions for marine pollutants
- 5.2.1.6.1 Replace existing paragraph with the following:
  - "5.2.1.6.1 "Except as provided in 2.10.2.7, packages containing marine pollutants meeting the criteria of 2.9.3 shall be durably marked with the marine pollutant mark."

#### 5.2.1.6.3 Amend 5.2.1.6.3 and figure to read as follows:

"5.2.1.6.3 The marine pollutant mark shall be as shown in the figure below.

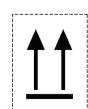

Marine Pollutant Mark

The marking shall be in the form of a square set at an angle of 45° (diamond-shaped). The symbol (fish and tree) shall be black on white or suitable contrasting background. The minimum dimensions shall be 100 mm x 100 mm and the minimum width of line forming the diamond shall be 2 mm. If the size of the package so requires, the dimensions/line thickness may be reduced, provided the marking remains clearly visible. Where dimensions are not specified, all features shall be in approximate proportion to those shown.

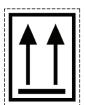

**NOTE 1**: The labelling provisions of 5.2.2 apply in addition to any requirement for packages to bear the marine pollutant mark.

**NOTE 2:** The provisions of 5.2.1.6.3 of IMDG Code (Amendment 36-12) may continue to be applied until 31 December 2016."

#### 5.2.1.7 Amend the figures and caption below to read as follows:

or

Two black or red arrows on white or suitable contrasting background.

The rectangular border is optional

All features shall be in approximate proportion to those shown."

#### 5.2.2 Labelling of packages including IBCs

#### 5.2.2.1 Labelling provisions

#### 5.2.2.1.12 Special provisions for the labelling of radioactive material

5.2.2.1.12.1 Amend the first and second sentences to read as follows:

"Except when enlarged labels are used in accordance with 5.3.1.1.5.1, each package, overpack and freight container containing radioactive material shall bear the labels conforming to the applicable models Nos. 7A, 7B or 7C, according to the appropriate category. Labels shall be affixed to two opposite sides on the outside of the package or overpack or on the outside of all four sides of a freight container or tank."

5.2.2.1.12.1 In the fourth sentence amend "under 6.4.11.2" read "under the provisions of 2.7.2.3.5", replace "which conform to model" with "conforming to model"; replace the last phrase of the fourth sentence with the following:

"such labels, where applicable shall be affixed adjacent to the labels conforming to the applicable model Nos. 7A, 7B or 7C."

- 5.2.2.1.12.2 In the introductory sentence, replace "Nos. 7A, 7B and 7C" with "the applicable model No. 7A, 7B or 7C".
- 5.2.2.1.12.2 In .2, amend the last sentence to read as follows:

"For fissile material, the total mass of fissile nuclides in units of grams (g), or multiples thereof, may be used in place of activity".

5.2.2.1.12.3 Amend to read as follows:

"5.2.2.1.12.3 Each label conforming to the model No. 7E shall be completed with the criticality safety index (CSI) as stated in the certificate of approval applicable in the countries through or into which the consignment is transported and issued by the competent authority or as specified in 6.4.11.2 or 6.4.11.3."

5.2.2.1.12.4 Amend to read as follows:

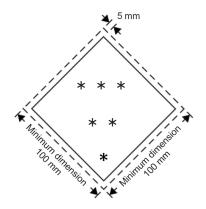

"5.2.2.1.12.4 For overpacks and freight containers, the label conforming to model No. 7E shall bear the sum of the criticality safety indexes of all the packages contained therein".

5.2.2.1.12.5 Replace "competent authority design or shipment approval" with "competent authority approval of design or shipment".

5.2.2.2 Provisions for labels

5.2.2.1.1 Amend to read as follows:

"5.2.2.2.1.1 Labels shall be configured as shown in the figure below:

Class/division label

- \* The class or, for divisions 5.1 and 5.2, the Division number shall be shown in the bottom corner
- \*\* Additional text/numbers/letters shall (if mandatory) or may (if optional) be shown in this bottom half
- \*\*\* The class or division symbol or, for divisions 1.4, 1.5 and 1.6, the division number and for Model No 7E the word "FISSILE" shall be shown in this top half".
- 5.2.2.2.1.1.1 Labels shall be displayed on a background of contrasting colour, or shall have either a dotted or solid outer boundary line.
- 5.2.2.2.1.1.2 The label shall be in the form of a square set at an angle of  $45^{\circ}$  (diamond-shaped). The minimum dimensions shall be  $100 \text{ mm} \times 100 \text{ mm}$  and the minimum width of the line inside the edge forming the diamond shall be 2 mm. The line inside the edge shall be parallel and 5 mm from the outside of that line to the edge of the label. The line inside the edge on the upper half of the label shall be the same colour as the symbol and the line inside the edge on the lower half of the label shall be the same colour as the class or division number in the bottom corner. Where dimensions are not specified, all features shall be in approximate proportion to those shown.
- 5.2.2.2.1.1.3 If the size of the package so requires the dimensions may be reduced, provided the symbols and other elements of the label remain clearly visible. The line inside the edge shall remain 5 mm to the edge of the label. The minimum width of the line inside the edge shall remain 2 mm. Dimensions for cylinders shall comply with 5.2.2.2.1.2.

**NOTE:** The provisions of 5.2.2.2.1.1 of the IMDG Code (Amendment 36-12) may continue to be applied until 31 December 2016. When so applied, 5.2.2.2.1.1.1, 5.2.2.2.1.1.2 and 5.2.2.2.1.1.3 shall not apply until 31 December 2016."

#### 5.2.2.2.2 Specimen Labels

5.2.2.2.2 Insert a new "note" under the heading as follows:

"Note: Labels shall satisfy the provisions below and conform, in terms of colour, symbols and general format, to the models shown in 5.2.2.2.2. Corresponding models required for other modes of transport, with minor variations which do not affect the obvious meaning of the label, are also acceptable."

The following symbols within the IMDG Code, should be replaced by those used by the UN Recommendations:

Class 2.1, Class 2.3, No. 3, No. 4, Class 4.3, Class 5.1, Class 5.2, Class 6 and Class 8.

#### Chapter 5.3 – Placarding and marking of cargo transport units

#### 5.3.1 Placarding

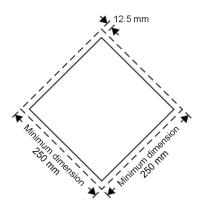

#### 5.3.1.1 Placarding provisions

#### 5.3.1.1.4 Placarding requirements

- 5.3.1.1.4.1 Replace the existing subparagraph ".1" with the following:
  - ".1 a freight container, semi-trailer or portable tank: one on each side and one on each end of the unit. Portable tanks having a capacity of less than 3,000 litres may be placarded or, alternatively, may be labeled instead, on only two opposite sides."
- 5.3.1.1.5 Special provisions for class 7
- 5.3.1.1.5.1 Amend the last sentence to read as follows:

"Instead of using both labels and placards, it is permitted as an alternative to use enlarged labels only, as shown in label models Nos. 7A, 7B and 7C, except having the minimum size shown in figure 5.3.1."

- 5.3.1.1.5.2 In the introductory sentence replace "No." with "Nos.", "or 7E" with "and 7E" and "(Model 7D)" with "(model No.7D)".
- 5.3.1.2 Specifications for placards
- 5.3.1.2.1 Amend to read as follows:
  - "5.3.1.2.1 Except as provided in 5.3.1.2.2 for the Class 7 placard, and in 5.3.2.3.2 for the marine pollutant mark, a placard shall be configured as shown in the figure below.

Placard (except for class 7)

The placard shall be in the form of a square set at an angle of 45° (diamond-shaped). The minimum dimensions shall be 250 mm x 250 mm (to the edge of the placard). The line inside the edge shall be parallel and 12.5 mm from the outside of that line to the edge of the placard. The symbol and line inside the edge shall correspond in colour to the label for the class or division of the dangerous goods in question. The class or division symbol/numeral shall be positioned and sized in proportion to those prescribed in 5.2.2.2 for the corresponding class or division of the dangerous goods in question. The placard shall display the number of the class or division (and for goods in Class 1, the compatibility group letter) of the dangerous goods in question in the manner prescribed in 5.2.2.2 for the corresponding label, in digits not less than 25 mm high. Where dimensions are not specified, all features shall be in approximate proportion to those shown.

**NOTE:** The provisions of 5.3.1.2.1 from the IMDG Code (amendment 36-12) may continue to be applied until 31 December 2016."

#### 5.3.2 Marking of cargo transport units

5.3.2.0.2 Insert a new second new sentence as follows:

"This may be reduced to 12 mm for portable tank containers with a capacity of less than 3,000 litres."

#### 5.3.2.2 Elevated temperature substances

#### 5.3.2.2.1 Amend to read as follows:

"5.3.2.2.1 Cargo transport units containing a substance that is transported or offered for transport in a liquid state at a temperature equal to or exceeding 100°C, in a solid state at a temperature equal to or exceeding 240°C shall bear on each side and on each end the mark shown in the figure below.

Mark for transport at elevated temperature

The marking shall be an equilateral triangle. The colour of the mark shall be red. The minimum dimension of the sides shall be 250 mm except for portable tanks with a capacity of less than 3,000 litres where the sides may be reduced to 100 mm. Where dimensions are not specified, all features shall be in approximate proportion to those shown.

**Note:** The provisions of 5.3.2.2 of the IMDG Code (Amendment 36-12) may continue to be applied until 31 December 2016."

#### 5.3.2.3 Marine pollutant mark

- 5.3.2.3 Replace existing paragraph under 5.3.2.3 with the following:
  - "5.3.2.3.1 Except as provided in 2.10.2.7, cargo transport units containing marine pollutants shall clearly display the marine pollutant mark in locations indicated in 5.3.1.1.4.1"
  - 5.3.2.3.2 The marine pollutant mark for cargo transport units shall be as described in 5.2.1.6.3, except that the minimum dimensions shall be 250 mm x 250 mm. For portable tanks with a capacity of less than 3,000 litres, the dimensions may be reduced to 100 mm x 100 mm."

#### Chapter 5.4 - Documentation

#### 5.4.1 Dangerous goods transport information

### 5.4.1.4.3 Information which supplements the Proper Shipping Name in the dangerous goods description

- 5.4.1.4.3 Replace existing subparagraph ".5" with the following:
  - ".5 Marine pollutants: Except as provided in 2.10.2.7, if the goods to be transported are marine pollutants, the goods shall be identified as "MARINE POLLUTANT", and for generic or "not otherwise specified" (N.O.S.) entries the Proper Shipping Name shall be supplemented with

the recognized chemical name of the marine pollutant (see 3.1.2.9). The term "MARINE POLLUTANT" may be supplemented with the term "ENVIRONMENTALLY HAZARDOUS";

- 5.4.1.5 Information required in addition to the dangerous goods description
- 5.4.1.5.7 Radioactive material
- 5.4.1.5.7.1 Amend subparagraph .6 to read as follows:
  - ".6 For fissile material:
    - (i) Shipped under one exception of 2.7.2.3.5.1 to 2.7.2.3.5.6, reference to that paragraph;
    - (ii) Shipped under 2.7.2.3.5.1 to 2.7.2.3.5.5, the total mass of fissile nuclides;
    - (iii) Contained in a package for which one of 6.4.11.2 (a) to (c) or 6.4.11.3 is applied, reference to that paragraph;
    - (iv) The criticality safety index, where applicable."
- 5.4.1.5.7.1 In subparagraph .7, replace "competent authority approval certificate" with "competent authority certificate of approval" and insert "fissile material excepted under 2.7.2.3.5.6," before "special arrangement".
- 5.4.1.5.7.3 Replace "competent authorities design or shipment approval" with "competent authority approval of design or shipment".
- 5.4.1.6 Certification
- 5.4.1.6.1 In the text of the certification, after "above", insert "/ below\*".

and insert the following footnote:

"\* as appropriate".

#### 5.4.1.5.12 Transport of solid dangerous goods in bulk containers

5.4.1.5.12 At the end replace the sentence "Bulk container BK2 approved by the competent authority of ..." with the following:

"Bulk container BK(x) approved by the competent authority of ...".

and at the end insert the following note:

**Note:** "(x)" shall be replaced with "1" or "2", as appropriate.

#### 5.4.2 Container/vehicle packing certificate

#### 5.4.2.1.8 Amend to read as follows:

".8 When substances presenting a risk of asphyxiation are used for cooling or conditioning purposes (such as dry ice (UN 1845) or nitrogen, refrigerated liquid (UN 1977) or argon, refrigerated liquid (UN 1951)), the container/vehicle is externally marked in accordance with 5.5.3.6; and".

#### 5.4.3 Documentation required aboard the ship

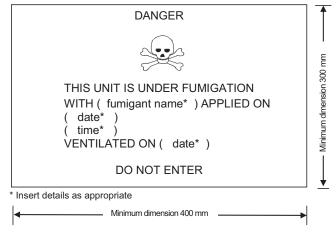

5.4.3.1 The footnote reference in the paragraph "\* FAL.2/Circ.52/Rev.1 may be used for this purpose" is replaced with "Resolution FAL. 10(35), adopted on 16 January 2009, amendments to the annex to the convention on facilitation of international maritime traffic, 1965".

#### Chapter 5.5 - Special provisions

#### 5.5.2.3 Marking and placarding

Amend 5.5.2.3.2 as follows:

"5.5.2.3.2 The fumigation warning mark shall be as shown in the figure below.

Fumigation warning mark

The marking shall be a rectangle. The minimum dimensions shall be 400 mm wide x 300 mm high and the minimum width of the outer line shall be 2 mm. The marking shall be in black print on a white background with lettering not less than 25 mm high. Where dimensions are not specified, all features shall be in approximate proportion to those shown.

**Note:** The provisions of 5.5.2.3.2 of the IMDG Code (Amendment 36-12) may continue to be applied until 31 December 2016."

5.5.3 Special provisions applicable to packages and cargo transport units containing substances presenting a risk of asphyxiation when used for cooling or conditioning purposes (such as dry ice (UN 1845) or nitrogen, refrigerated liquid (UN 1977) or argon, refrigerated liquid (UN 1951))

#### 5.5.3.1 Scope

- 5.5.3 Add a new subparagraph 5.5.3.1.4 to read as follows:
  - "5.5.3.1.4 Cargo transport units containing substances used for cooling or conditioning purposes include cargo transport units containing substances used for cooling or conditioning purposes inside packages as well as cargo transport units with unpackaged substances used for cooling or conditioning purposes."

#### 5.5.3.2 General

- 5.5.3.2.2 Amend the first sentence as follows:
  - "5.5.3.2.2 When dangerous goods are loaded in cargo transport units containing substances used for cooling or conditioning purposes any provisions of these Regulations relevant to these dangerous goods apply in addition to the provisions of this section."
- 5.5.3.2.4 Amend to read as follows:
  - "5.5.3.2.4 Persons engaged in the handling or transport of cargo transport units containing substances used for cooling or conditioning purposes shall be trained commensurate with their responsibilities."

#### 5.5.3.6 Marking of cargo transport units

- 5.5.3.6.1 Add "purposes" after "cooling or conditioning" in the first sentence.
- 5.5.3.6.2 Amend paragraph to read as follows:
  - "5.5.3.6.2 The warning mark shall be as shown in the figure below

Coolant/conditioning warning mark for cargo transport units

- \* Insert proper shipping name of the coolant/conditioner. The lettering shall be in capitals, all be on one line and shall be at least 25 mm high. If the length of the proper shipping name is too long to fit in the space provided, the lettering may be reduced to the maximum size possible to fit. For example: CARBON DIOXIDE, SOLID.
- \*\* Insert "AS COOLANT" or "AS CONDITIONER" as appropriate. The lettering shall be in capitals, all be on one line and be at least 25 mm high.

The marking shall be a rectangle. The minimum dimensions shall be 150 mm wide  $\times 250 \text{ mm}$  high. The word "WARNING" shall be in red or white and be at least 25 mm high. Where dimensions are not specified, all features shall be in approximate proportion to those shown.

**NOTE:** The provisions of 5.5.3.6.2 of the IMDG Code (Amendment 36-12) may continue to be applied until 31 December 2016."

#### 5.5.3.7 Documentation

5.5.3.7.1 Replace "that have been cooled or conditioned" with "containing or have contained substances used for cooling or conditioning purposes".

#### PART 6

# CONSTRUCTION AND TESTING OF PACKAGINGS, INTERMEDIATE BULK CONTAINERS (IBCs), LARGE PACKAGINGS, PORTABLE TANKS, MULTIPLE-ELEMENT GAS CONTAINERS (MEGCs) AND ROAD TANK VEHICLES

- Chapter 6.1 Provisions for the construction and testing of packagings (other than for class 6.2 substances)
- 6.1.1 Applicability and general provisions
- 6.1.1.1 Applicability
- 6.1.1.1.4 Amend to read "Packagings for liquids, other than combination packagings, with capacity exceeding 450 L".
- 6.1.3 Marking
- 6.1.3.1(e) Insert a reference to note "\*" at the centre of the symbol and add the following note under the symbol:
  - "\* The last two digits of the year of manufacture may be displayed at that place. In such a case, the two digits of the year in the type approval marking and in the inner circle of the clock shall be identical."

and insert a new Note at the end to read as follows:

"NOTE: Other methods that provide the minimum required information in a durable, visible and legible form are also acceptable."

- Chapter 6.2 Provisions for the construction and testing of pressure receptacles, aerosol dispensers, small receptacles containing gas (gas cartridges) and fuel cell cartridges containing liquefied flammable gas
- 6.2.1 General provisions
- 6.2.1.1 Design and construction
- 6.2.1.1.5 Add the following new last sentence:

"The test pressure of a cylinder for an adsorbed gas shall be in accordance with packing instruction P208."

- 6.2.2 Provisions for UN pressure receptacles
- 6.2.2 Add the following new second sentence:

"Manufacture of new pressure receptacles or service equipment according to any particular standard in 6.2.2.1 and 6.2.2.3 is not permitted after the date shown in the right hand column of the tables."

Renumber the existing NOTE as "NOTE 1".

MSC 93/22/Add.2 Annex 8, page 185

Add the following new note:

"NOTE 2: UN pressure receptacles and service equipment constructed according to standards applicable at the date of manufacture may continue in use subject to the periodic inspection provisions of this Code."

#### 6.2.2.1 Design, construction and initial inspection and test

6.2.2.1.1 In the table, add a new third column. Add a new first row with the following text:

| Reference | Title | Applicable for |
|-----------|-------|----------------|
| Reference | Title | manufacture    |

For ISO Standards "ISO 9809-1:1999", "ISO 9809-2:2000" and "ISO 9809-3:2000", in the third column, add "Until 31 December 2018".

After ISO Standard "ISO 9809-1:1999" add the following new standard:

| ISO 9809-1:2010 | Gas cylinders Refillable seamless steel gas        | Until further |
|-----------------|----------------------------------------------------|---------------|
|                 | cylinders Design, construction and testing Part 1: | notice        |
|                 | Quenched and tempered steel cylinders with tensile |               |
|                 | strength less than 1 100 MPa                       |               |

After ISO Standard "ISO 9809-2:2000" add the following new standard:

| ISO 9809-2:2010 | Gas cylinders – Refillable seamless steel gas          | Until further |
|-----------------|--------------------------------------------------------|---------------|
|                 | cylinders – Design, construction and testing – Part 2: | notice        |
|                 | Quenched and tempered steel cylinders with tensile     |               |
|                 | strength greater than or equal to 1 100 MPa            |               |

After ISO Standard "ISO 9809-3:2000" add the following new standard:

| ISO 9809-3:2010 | Gas cylinders Refillable seamless steel gas        | Until further |
|-----------------|----------------------------------------------------|---------------|
|                 | cylinders Design, construction and testing Part 3: | notice        |
|                 | Normalized steel cylinders                         |               |

For all the other standards, in the column "Applicable for manufacture", add "Until further notice".

6.2.2.1.2 In the table, add a new third column. Add a new first row with the following text:

| Reference Title | Title | Applicable for |
|-----------------|-------|----------------|
| Reference       | ritie | manufacture    |

For ISO Standard "ISO 11120:1999", in the column "Applicable for manufacture", add "Until further notice".

#### 6.2.2.1.3 Amend the first table to read as follows:

| Reference       | Title                                                    | Applicable for<br>manufacture |
|-----------------|----------------------------------------------------------|-------------------------------|
| ISO 9809-1:1999 | Gas cylinders – Refillable seamless steel gas            | Until 31                      |
|                 | cylinders – Design, construction and testing – Part 1:   | December                      |
|                 | Quenched and tempered steel cylinders with tensile       | 2018                          |
|                 | strength less than 1 100 MPa                             |                               |
|                 | <b>NOTE:</b> The note concerning the F factor in section |                               |
|                 | 7.3 of this standard shall not be applied for UN         |                               |
|                 | cylinders.                                               |                               |
| ISO 9809-1:2010 | Gas cylinders – Refillable seamless steel gas            | Until further                 |
|                 | cylinders – Design, construction and testing – Part 1:   | notice                        |
|                 | Quenched and tempered steel cylinders with tensile       |                               |
|                 | strength less than 1 100 MPa                             |                               |
| ISO 9809-3:2000 | Gas cylinders – Refillable seamless steel gas            | Until 31                      |
|                 | cylinders – Design, construction and testing – Part 3:   | December                      |
|                 | Normalized steel cylinders                               | 2018                          |
| ISO 9809-3:2010 | Gas cylinders – Refillable seamless steel gas            | Until further                 |
|                 | cylinders – Design, construction and testing – Part 3:   | notice                        |
|                 | Normalized steel cylinders                               |                               |

6.2.2.1.3 (second table), 6.2.2.1.4 and 6.2.2.1.5 In the tables, add a new third column. Add a new first row with the following text:

| Reference | Title | Applicable for |
|-----------|-------|----------------|
| Reference | Title | manufacture    |

For all the standards, in the column "Applicable for manufacture", add "Until further notice".

#### 6.2.2.1.6 After 6.2.2.1.5 insert the following new paragraphs:

"6.2.2.1.6 The standard shown below applies for the design, construction and initial inspection and test of UN bundles of cylinders. Each cylinder in a UN bundle of cylinders shall be a UN cylinder complying with the requirements of 6.2.2. The inspection requirements related to the conformity assessment system and approval for UN bundles of cylinders shall be in accordance with 6.2.2.5.

| Reference      | Title                                      | Applicable for<br>manufacture |
|----------------|--------------------------------------------|-------------------------------|
| ISO 10961:2010 | Gas cylinders – Cylinder bundles – Design, | Until further                 |
|                | manufacture, testing and inspection        | notice                        |

**NOTE**: Changing one or more cylinders of the same design type, including the same test pressure, in an existing UN bundle of cylinders does not require re-certification of the existing bundle."

"6.2.2.1.7 The following standards apply for the design, construction and initial inspection and test of UN cylinders for adsorbed gases except that the inspection requirements related to the conformity assessment system and approval shall be in accordance with 6.2.2.5.

| Reference           | Title                                                                                                                                                                                       | Applicable for<br>manufacture |
|---------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| ISO 11513:2011      | Gas cylinders – Refillable welded steel cylinders containing materials for sub-atmospheric gas packaging (excluding acetylene) – Design, construction, testing, use and periodic inspection | Until further<br>notice       |
| ISO 9809-<br>1:2010 | Gas cylinders – Refillable seamless steel gas cylinders – Design, construction and testing – Part 1: Quenched and tempered steel cylinders with tensile strength less than 1 100 MPa        | Until further<br>notice       |

#### 6.2.2.2 Materials

6.2.2.2 Replace "ISO 11114-1:1997" with "ISO 11114-1:2012". In the title for standard "ISO 11114-1:2012", delete "Transportable". Delete the note at the end.

#### 6.2.2.3 Service equipment

6.2.2.3 Amend the first table to read as follows:

| Reference      | Title                                                      | Applicable for manufacture |
|----------------|------------------------------------------------------------|----------------------------|
| ISO 11117:1998 | Gas cylinders – Valve protection caps and valve            | Until 31                   |
|                | guards for industrial and medical gas cylinders –          | December                   |
|                | Design, construction and tests                             | 2014                       |
| ISO 11117:2008 | Gas cylinders - Valve protection caps and valve            | Until further              |
| + Cor 1:2009   | guards - Design, construction and tests                    | notice                     |
| ISO 10297:1999 | Gas cylinders – Refillable gas cylinder valves –           | Until 31                   |
|                | Specification and type testing                             | December                   |
|                |                                                            | 2008                       |
| ISO 10297:2006 | Gas cylinders – Refillable gas cylinder valves –           | Until further              |
|                | Specification and type testing                             | notice                     |
| ISO 13340:2001 | Transportable gas cylinders – Cylinders valves for non-    | Until further              |
|                | refillable cylinders – Specification and prototype testing | notice                     |

6.2.2.3 In the second table, add a new third column. Add a new first row with the following text:

|           | Reference  | Title | Applicable for |
|-----------|------------|-------|----------------|
| Reference | Kelelelice | Title | manufacture    |

For ISO Standard "ISO 16111:2008", in the column "Applicable for manufacture", add "Until further notice".

6.2.2.4 In the table, add a new third column. Add a new first row with the following text:

| Reference Title Applicab |
|--------------------------|
|--------------------------|

For all standards, in the column "Applicable", add "Until further notice".

#### 6.2.2.4 Periodic inspection and test

6.2.2.4 In the table of standards for periodic inspection and test, after the entry for "ISO 10462:2005" add the following new entry:

MSC 93/22/Add.2 Annex 8, page 188

| ISO<br>11513:2011 | materials for sub-atmospheric gas packaging (excluding                  | Until further notice |
|-------------------|-------------------------------------------------------------------------|----------------------|
|                   | acetylene) – Design, construction, testing, use and periodic inspection |                      |

#### 6.2.2.7 Marking of refillable UN pressure receptacles

#### 6.2.2.7 Amend the note to read as follows:

"Note: Marking requirements for UN metal hydride storage systems are given in 6.2.2.9 and marking requirements for UN bundles of cylinders are given in 6.2.2.10."

- 6.2.2.7.4 In subparagraph (p) replace "ISO 11114-1:1997" with "ISO 11114-1:2012".
- 6.2.2.7.9 Is deleted.

#### 6.2.2.9 Marking of UN metal hydride storage systems

6.2.2.9.2 In subparagraph (j) replace "ISO 11114-1:1997" with "ISO 11114-1:2012".

#### 6.2.2.10 Marking of bundles of cylinders

Add the following new section:

### "6.2.2.10 Marking of bundles of cylinders

- 6.2.2.10.1 Individual cylinders in a bundle of cylinders shall be marked in accordance with 6.2.2.7.
- 6.2.2.10.2 Refillable UN bundles of cylinders shall be marked clearly and legibly with certification, operational, and manufacturing marks. These marks shall be permanently affixed (e.g. stamped, engraved, or etched) on a plate permanently attached to the frame of the bundle of cylinders. Except for the UN packaging symbol, the minimum size of the marks shall be 5 mm. The minimum size of the UN packaging symbol shall be 10 mm.
- 6.2.2.10.3 The following marks shall be applied:
  - (a) The certification marks specified in 6.2.2.7.2 (a), (b), (c), (d) and (e);
  - (b) The operational marks specified in 6.2.2.7.3 (f), (i), (j) and the total of the mass of the frame of the bundle and all permanently attached parts (cylinders, manifold, fittings and valves). Bundles intended for the carriage of UN 1001 acetylene, dissolved and UN 3374 acetylene, solvent free shall bear the tare mass as specified in clause B.4.2 of ISO 10961:2010; and
  - (c) The manufacturing marks specified in 6.2.2.7.4 (n), (o) and, where applicable, (p).

#### 6.2.2.10.4 The marks shall be placed in three groups:

- (a) The manufacturing marks shall be the top grouping and shall appear consecutively in the sequence given in 6.2.2.10.3 (c);
- (b) The operational marks in 6.2.2.10.3 (b) shall be the middle grouping and the operational mark specified in 6.2.2.7.3 (f) shall be immediately preceded by the operational mark specified in 6.2.2.7.3 (i) when the latter is required;
- (c) Certification marks shall be the bottom grouping and shall appear in the sequence given in 6.2.2.10.3 (a)."

# 6.2.4 Provisions for aerosol dispensers, small receptacles containing gas (gas cartridges) and fuel cell cartridges containing liquefied flammable gas

6.2.4 In the heading, delete the word "flammable". Insert the following text after the heading:

"Each filled aerosol dispenser or gas cartridge or fuel cell cartridge shall be subjected to a test in a hot water bath in accordance with 6.2.4.1 or an approved water bath alternative in accordance with 6.2.4.2."

# 6.2.4.1 Small receptacles containing gas (gas cartridges) and fuel cell cartridges containing liquefied flammable gas

Delete 6.2.4.1, 6.2.4.1.1 and 6.2.4.1.2, heading 6.2.4.2 and the text under this heading.

Renumber heading 6.2.4.2.1 as 6.2.4.1.

#### 6.2.4.2 Aerosol dispensers

#### 6.2.4.2.1 Hot water bath test

- 6.2.4.2.1.1 Renumber as 6.2.4.1.1. In the first sentence, after "capacity of the aerosol dispenser" insert ", gas cartridge or fuel cell cartridge". In the second sentence, after "to heat or if aerosol dispensers" insert "gas cartridges or fuel cell cartridges" and after "one aerosol dispenser," insert "gas cartridge or fuel cell cartridge".
- 6.2.4.2.1.2 Renumber as 6.2.4.1.2. After the first "aerosol dispenser" insert ", receptacle or fuel cell cartridge". After the second "aerosol dispenser" insert ", gas cartridge or fuel cell cartridge".

Renumber heading 6.2.4.2.2 as 6.2.4.2 and, in the text under this heading, replace "of 6.2.4.2.2.1, 6.2.4.2.2.2 and 6.2.4.2.2.3" by "of 6.2.4.2.1 and, as appropriate, 6.2.4.2.2 or 6.2.4.2.3".

#### 6.2.4.2.2 Alternative methods

6.2.4.2.2.1 Renumber as 6.2.4.2.1. In the first sentence, after "Aerosol dispenser" insert ", gas cartridge or fuel cell cartridge". In the second sentence, after "that all aerosol dispensers" insert ", gas cartridges or fuel cell cartridges" In indent (f) insert the following text at the end ", gas cartridges or fuel cell cartridges".

Before 6.2.4.2.2, insert the following text "6.2.4.2.2 Aerosol dispensers".

- 6.2.4.2.2.2 Pressure and leak testing of aerosol dispensers before filling
- 6.2.4.2.2.2 Renumber as 6.2.4.2.2.1. Replace "Every" with "Each" at the beginning of the first sentence.
- 6.2.4.2.2.3 Testing of the aerosol dispensers after filling
- 6.2.4.2.2.3 Renumber as 6.2.4.2.2.2.

Add a new 6.2.4.2.3 to read as follows:

- "6.2.4.2.3 Gas cartridges and fuel cell cartridges
- 6.2.4.2.3.1 Pressure testing of gas cartridges and fuel cell cartridges

Each gas cartridge or fuel cell cartridge shall be subjected to a test pressure equal to or in excess of the maximum expected in the filled receptacle at  $55^{\circ}$ C ( $50^{\circ}$ C if the liquid phase does not exceed 95% of the capacity of the receptacle at  $50^{\circ}$ C). This test pressure shall be that specified for the gas cartridge or fuel cell cartridge and shall not be less than two thirds the design pressure of the gas cartridge or fuel cell cartridge. If any gas cartridge or fuel cell cartridge shows evidence of leakage at a rate equal to or greater than  $3.3 \times 10^{-2}$  mbar.l.s<sup>-1</sup> at the test pressure or distortion or any other defect, it shall be rejected.

6.2.4.2.3.2 Leak testing gas cartridges and fuel cell cartridges

Prior to filling and sealing, the filler shall ensure that the closures (if any), and the associated sealing equipment are closed appropriately and the specified gas is used.

Each filled gas cartridge or fuel cell cartridge shall be checked for the correct mass of gas and shall be leak tested. The leak detection equipment shall be sufficiently sensitive to detect at least a leak rate of 2.0 x 10<sup>-3</sup> mbar.l.s<sup>-1</sup> at 20°C.

Any gas cartridge or fuel cell cartridge that has gas masses not in conformity with the declared mass limits or shows evidence of leakage or deformation, shall be rejected."

# Chapter 6.4 – Provisions for the construction, testing and approval of packages and material of class 7

In the title, replace "class 7" with "radioactive material".

# 6.4.2 General provisions

- 6.4.2.11 Insert a new paragraph 6.4.2.11 to read as follows:
  - "6.4.2.11 A package shall be so designed that it provides sufficient shielding to ensure that, under routine conditions of transport and with the maximum radioactive contents that the package is designed to contain, the radiation level at any point on the external surface of the package would not exceed the values specified in 2.7.2.4.1.2, 4.1.9.1.10 and 4.1.9.1.11, as applicable, with account taken of 7.1.4.5.3.3 and 7.1.4.5.5".

Current paragraphs 6.4.2.11 and 6.4.2.12 become 6.4.2.12 and 6.4.2.13 respectively.

## 6.4.3 Additional provisions for packages transported by air

6.4.3.3 Replace "leakage" with "loss or dispersal of radioactive contents from the containment system,".

#### 6.4.6 Provisions for packages containing uranium hexafluoride

6.4.6.1 Amend the first sentence to read as follows:

"Packages designed to contain uranium hexafluoride shall meet the requirements which pertain to the radioactive and fissile properties of the material prescribed elsewhere in this Code."

- 6.4.6.2 In subparagraphs .1 and .3, insert at the end: "except as allowed in 6.4.6.4".
- 6.4.6.4 In the introductory sentence replace "the approval of the competent authority" with "multilateral approval" and insert "the packages are designed:" at the end, after "if".

and in subparagraphs (a) and (b) delete "the packages are designed" and replace "and" with "and/or" at the end. In subparagraph (c), delete "for packaged designed" and replace "hexafluoride, the packages" with "hexafluoride and the packages".

### 6.4.8 Provisions for Type B(U) packages

- 6.4.8.1 Amend to read as follows:
  - "6.4.8.1 Type B(U) packages shall be designed to meet the requirements specified in 6.4.2, the requirements specified in 6.4.3 if carried by air, and of 6.4.7.2 to 6.4.7.15, except as specified in 6.4.7.14 (a), and, in addition, the requirements specified in 6.4.8.2 to 6.4.8.15."
- 6.4.8.2 Amend the end of the introductory paragraph to read: "...which may cause one or more of the following:". And in (a) and (b), delete "or" at the end.
- 6.4.8.8 In subparagraph (b), replace "and the tests in" with "and either the test in."

#### 6.4.9 Provisions for Type B(M) packages

6.4.9.1 In the first sentence, replace "6.4.8.4, 6.4.8.5 and 6.4.8.6," with "6.4.8.4 to 6.4.8.6". And in the second sentence, insert "6.4.8.4 and" after "packages specified in".

# 6.4.10 Provisions for Type C packages

- 6.4.10.3 Amend to read as follows:
  - "6.4.10.3 A package shall be so designed that, if it were at the maximum normal operating pressure and subjected to:
  - (a) The tests specified in 6.4.15, it would restrict the loss of radioactive contents to not more than  $10^{-6}$  A<sub>2</sub> per hour; and
  - (b) The test sequences in 6.4.20.1,

- it would retain sufficient shielding to ensure that the radiation level at 1 m from the surface of the package would not exceed 10 mSv/h with the maximum radioactive contents which the package is designed to contain; and
- (ii) it would restrict the accumulated loss of radioactive contents in a period of 1 week to not more than 10 A<sub>2</sub> for krypton-85 and not more than A<sub>2</sub> for all other radionuclides."

The text of last paragraph remains unchanged.

#### 6.4.11 Provisions for packages containing fissile material

- 6.4.11.1 In (a), insert "routine," before "normal".
- 6.4.11.1 Amend (b)(i) to read as follows: "of 6.4.7.2 except for unpackaged material when specifically allowed by 2.7.2.3.5.5;".
- 6.4.11.1 In (b)(ii) delete "and" at the end.
- 6.4.11.1 Amend (b)(iii) to read as follows: "of 6.4.7.3 unless the material is excepted by 2.7.2.3.5;".
- 6.4.11.1 Insert a new (b) (iv) to read as follows:

"(iv) of 6.4.11.4 to 6.4.11.14, unless the material is excepted by 2.7.2.3.5, 6.4.11.2 or 6.4.11.3."

#### 6.4.11.2 Amend to read as follows:

- "6.4.11.2 Packages containing fissile material that meet the provisions of subparagraph (d) and one of the provisions of (a) to (c) below are excepted from the requirements of 6.4.11.4 to 6.4.11.14.
  - (a) Packages containing fissile material in any form provided that:
    - The smallest external dimension of the package is not less than 10 cm;
    - (ii) The criticality safety index of the package is calculated using the following formula:

$$CSI = 50 \times 5 \times \left(\frac{Mass \text{ of U - 235 in package (g)}}{Z} + \frac{Mass \text{ of other fissile nuclides * in package (g)}}{280}\right)$$

\* Plutonium may be of any isotopic composition provided that the amount of Pu-241 is less than that of Pu-240 in the package

where the values of Z are taken from table 6.4.11.2.

- (iii) The CSI of any package does not exceed 10;
- (b) Packages containing fissile material in any form provided that:

- (i) The smallest external dimension of the package is not less than 30 cm;
- (ii) The package, after being subjected to the tests specified in 6.4.15.1 to 6.4.15.6:
  - Retains its fissile material contents;
  - Preserves the minimum overall outside dimensions of the package to at least 30 cm;
  - Prevents the entry of a 10 cm cube.
- (iii) The criticality safety index of the package is calculated using the following formula:

$$CSI = 50 \times 2 \times \left(\frac{Mass \text{ of U - 235 in package (g)}}{Z} + \frac{Mass \text{ of other fissile nuclides *in package (g)}}{280}\right)$$

\* Plutonium may be of any isotopic composition provided that the amount of Pu-241 is less than that of Pu-240 in the package.

where the values of Z are taken from table 6.4.11.2.

- (iv) The criticality safety index of any package does not exceed 10;
- (c) Packages containing fissile material in any form provided that:
  - The smallest external dimension of the package is not less than 10 cm;
  - (ii) The package, after being subjected to the tests specified in 6.4.15.1 to 6.4.15.6;
    - Retains its fissile material contents;
    - Preserves the minimum overall outside dimensions of the package to at least 10 cm;
    - Prevents the entry of a 10 cm cube.
  - (iii) The CSI of the package is calculated using the following formula:

$$CSI = 50 \times 2 \times \left(\frac{Mass \text{ of U - 235 in package (g)}}{450} + \frac{Mass \text{ of other fissile nuclides *in package (g)}}{280}\right)$$

- \* Plutonium may be of any isotopic composition provided that the amount of Pu-241 is less than that of Pu-240 in the package.
  - (iv) The maximum mass of fissile nuclides in any package does not exceed 15 g;

(d) The total mass of beryllium, hydrogenous material enriched in deuterium, graphite and other allotropic forms of carbon in an individual package shall not be greater than the mass of fissile nuclides in the package except where their total concentration does not exceed 1 g in any 1,000 g of material. Beryllium incorporated in copper alloys up to 4% in weight of the alloy does not need to be considered."

Table 6.4.11.2 Insert a new table 6.4.11.2 to read as follows:

"Table 6.4.11.2 Values of Z for calculation of criticality safety index in accordance with 6.4.11.2

| Enrichement <sup>a</sup>    | Z    |
|-----------------------------|------|
| Uranium enriched up to 1.5% | 2200 |
| Uranium enriched up to 5%   | 850  |
| Uranium enriched up to 10%  | 660  |
| Uranium enriched up to 20%  | 580  |
| Uranium enriched up to 100% | 450  |

<sup>&</sup>lt;sup>a</sup> If a package contains uranium with varying enrichments of U-235, then the value corresponding to the highest enrichment shall be used for Z.

6.4.11.3 Insert a new paragraph 6.4.11.3 to read as follows:

"6.4.11.3 Packages containing not more than 1 000 g of plutonium are excepted from the application of 6.4.11.4 to 6.4.11.14 provided that:

- (a) Not more than 20% of the plutonium by mass is fissile nuclides:
- (b) The criticality safety index of the package is calculated using the following formula:

$$CSI = 50 \times 2 \times \frac{\text{mass of plutonium}(g)}{1000}$$

(c) If uranium is present with the plutonium, the mass of uranium shall be no more than 1% of the mass of the plutonium."

Current paragraphs 6.4.11.3 to 6.4.11.13 become new paragraphs 6.4.11.4 to 6.4.11.14.

6.4.11.4 (former 6.4.11.3) Replace "6.4.11.7 to 6.4.11.12" with "6.4.11.8 to 6.4.11.13".

6.4.11.5 (former 6.4.11.4) Replace "6.4.11.7 to 6.4.11.12" with "6.4.11.8 to 6.4.11.13" and insert "either" at the end of the introductory sentence.

6.4.11.8 (former 6.4.11.7), in the last sentence of the introductory paragraph, insert "either of" before "the following:" and in subparagraph (a) and (b) (i), replace "6.4.11.12 (b)" with "6.4.11.13 (b)".

- 6.4.11.9 (former 6.4.11.8), in the last sentence replace "6.4.11.12 (b)" with "6.4.11.13 (b)" and "6.4.11.9 (c)" with "6.4.11.10 (c)".
- 6.4.11.10 (former 6.4.11.9) In the introductory sentence replace "6.4.11.7 and 6.4.11.8" with "6.4.11.8 and 6.4.11.9".
- 6.4.11.10 (former 6.4.11.9) In subparagraph (b), replace "6.4.11.11 (b)" with "6.4.11.12 (b)". In (c), replace "6.4.11.12 (b)" with "6.4.11.13 (b)".
- 6.4.11.11 (former 6.4.11.10) In subparagraph (b), replace "6.4.11.9" with "6.4.11.10" and "6.4.11.7" with "6.4.11.8".
- 6.4.11.13 (former 6.4.11.12) In subparagraph (c), replace "6.4.11.12 (b)" with "6.4.11.13(b)".
- 6.4.11.14 (former 6.4.11.13) Replace "6.4.11.11 and 6.4.11.12" with "6.4.11.12 and 6.4.11.13".
- 6.4.13 Testing the integrity of the containment system and shielding and evaluating criticality safety
- 6.4.13 In subparagraph (c) replace "6.4.11.13" with "6.4.11.14".
- 6.4.15 Test for demonstrating ability to withstand normal conditions of transport
- 6.4.15.5 In subparagraph (a), amend the beginning to read: "The equivalent of 5 times ...".
- 6.4.17 Tests for demonstrating ability to withstand accident conditions of transport
- 6.4.17.2 In the introductory paragraph, replace "6.4.11.12" with "6.4.11.13".
- 6.4.17.2 In subparagraph (b), move the phrase "so as to suffer maximum damage" to the end of the sentence after "on the target".
- 6.4.17.2 In subparagraph (c), insert the following new third sentence: "The lower face of the steel plate shall have its edges and corners rounded off to a radius of not more than 6 mm."
- 6.4.19 Water leakage test for packages containing fissile material
- 6.4.19.1 Replace "6.4.11.7 to 6.4.11.12" with "6.4.11.8 to 6.4.11.13".
- 6.4.19.2 Replace "6.4.11.12" with "6.4.11.13".
- 6.4.20 Tests for Type C packages
- 6.4.20.2 In the first sentence, insert "vertical" before "solid". In the second sentence replace "the probe to the surface of the specimen shall be as to cause" with "the package specimen and the impact point on the package surface shall be such as to cause".

#### 6.4.22 Approvals of package designs and materials

- 6.4.22.4 Amend to read as follows:
  - "6.4.22.4 Each package design for fissile material which is not excepted by any of the paragraphs 2.7.2.3.5.1 to 2.7.2.3.5.6, 6.4.11.2 and 6.4.11.3 shall require multilateral approval."
- 6.4.22.6 Insert a new paragraph 6.4.22.6 to read as follows:
  - "6.4.22.6 The design for a fissile material excepted from "FISSILE" classification in accordance with 2.7.2.3.5.6 shall require multilateral approval.
- 6.4.22.7 Insert a new paragraph to read as follows:
  - "6.4.22.7 Alternative activity limits for an exempt consignment of instruments or articles in accordance with 2.7.2.2.2 shall require multilateral approval."

# 6.4.23 Applications for approval and approvals for radioactive material transport

6.4.23.2 In the introductory sentence replace "shipment approval" with "approval of shipment".

In subparagraph .3, amend the end of the paragraph to read as follows:

- "... referred to in the certificate of approval for the package design, if applicable, issued under 5.1.5.2.1.1.3, 5.1.5.2.1.1.6 or 5.1.5.2.1.1.7, are to be put into effect.".
- 6.4.23.4 In (f), insert "nuclear" after "irradiated" and replace "6.4.11.4 (b)" with "6.4.11.5 (b)". In (i), replace "quality assurance programme" with "management system" and "1.1.2.3.1" with "1.5.3.1".
- 6.4.23.5 In the introductory sentence, delete "for package approval".

in subparagraph (a), replace "6.4.8.4, 6.4.8.5, 6.4.8.6" with "6.4.8.4 to 6.4.8.6".

and in subparagraph (d), amend the beginning of the sentence to read: "a statement of the range".

- 6.4.23.6 Replace "quality assurance programme" with "management system".
- 6.4.23.7 Replace "quality assurance programme" with "management system".
- 6.4.23.8 In subparagraph (d) replace "quality assurance programme" with "management system".
- 6.4.23.9 Insert a new paragraph to read as follows:
  - "6.4.23.9 An application for approval of design for fissile material excepted from "FISSILE" classification in accordance with table 2.7.2.1.1, under 2.7.2.3.5.6 shall include:
    - (a) A detailed description of the material; particular reference shall be made to both physical and chemical states;

- (b) A statement of the tests that have been carried out and their results, or evidence based on calculation methods to show that the material is capable of meeting the requirements specified in 2.7.2.3.6;
- (c) A specification of the applicable management system as required in 1.5.3.1;
- (d) A statement of specific actions to be taken prior to shipment."

#### 6.4.23.10 Insert a new paragraph to read as follows:

- "6.4.23.10 An application for approval of alternative activity limits for an exempt consignment of instruments or articles shall include:
  - (a) An identification and detailed description of the instrument or article, its intended uses and the radionuclide(s) incorporated;
  - (b) The maximum activity of the radionuclide(s) in the instrument or article:
  - (c) Maximum external radiation levels arising from the instrument or article:
  - (d) The chemical and physical forms of the radionuclide(s) contained in the instrument or article;
  - (e) Details of the construction and design of the instrument or article, particularly as related to the containment and shielding of the radionuclide in routine, normal and accident conditions of transport;
  - (f) The applicable management system, including the quality testing and verification procedures to be applied to radioactive sources, components and finished products to ensure that the maximum specified activity of radioactive material or the maximum radiation levels specified for the instrument or article are not exceeded, and that the instruments or articles are constructed according to the design specifications;
  - (g) The maximum number of instruments or articles expected to be shipped per consignment and annually;
  - (h) Dose assessments in accordance with the principles and methodologies set out in the International Basic Safety Standards for Protection against Ionizing Radiation and for the Safety of Radiation Sources, Safety Series No.115, IAEA, Vienna (1996), including individual doses to transport workers and members of the public and, if appropriate, collective doses arising from routine, normal and accident conditions of transport, based on representative transport scenarios the consignments are subject to."

Current paragraphs 6.4.23.9 to 6.4.23.11 become new paragraphs 6.4.23.11 to 6.4.23.13.

- 6.4.23.11 (former 6.4.23.9), in the introductory sentence, replace "approval certificate" with "certificate of approval".
- 6.4.23.11 (former 6.4.23.9) (a), replace "6.4.23.10 (b)" with "6.4.23.12 (b).
- 6.4.23.11 (former 6.4.23.9) (b) Insert "or alternative activity limit for exempt consignment" at the end of the first sentence. Amend the second sentence to read: "The identification mark of the approval of shipment shall be clearly related to the identification mark of the approval of design."
- 6.4.23.11 (former 6.4.23.9) (c) In the introductory sentence, replace "types of approval certificates" with "types of certificate of approval". Insert the following line between those corresponding to LD and T: "FE Fissile material complying with the requirements of 2.7.2.3.6". Add the following line at the end of the list: "AL Alternative activity limits for an exempt consignment of instruments or articles".
- 6.4.23.11 (former 6.4.23.9) (d) Insert "certificates of approval of" before "package design", delete (twice) "approval certificates" after "radioactive material", and replace "6.4.24.2 to 6.4.24.4" with "6.4.24.2 to 6.4.24.5".
- 6.4.23.12 (former 6.4.23.10) In the introductory sentence replace "type codes" with "identification marks".
- 6.4.23.12 (former 6.4.23.10) (a) Replace "6.4.23.9 (a), (b), (c) and (d)" with "6.4.23.11 (a), (b), (c) and (d)"; "design approval" with "approval of design", and "shipment approval" with "the approval of shipment".
- 6.4.23.12 (former 6.4.23.10) (a) For A/132/B(M)F-96, replace "package design approval certificate" with "certificate of approval for the package design".
- 6.4.23.12 (former 6.4.23.10) (a) For A/132/B(M)F-96T, replace "shipment approval" with "approval of shipment".
- 6.4.23.12 (former 6.4.23.10) (a) For A/137/X, replace "a special arrangement approval" with "an approval of special arrangement".
- 6.4.23.12 (former 6.4.23.10) (a) For A/139/IF-96 and A/145/H(U)-96, replace "package design approval certificate" with "certificate of approval for the package design".
- 6.4.23.12 (former 6.4.23.10) (b) Replace "according to 6.4.23.16" with "in accordance with 6.4.23.20".
- 6.4.23.12 (former 6.4.23.10) (c) Replace (twice) "package design approval certificate" with "certificate of approval for the package design"; and "approval certificate" with "certificate of approval" in the last sentence.
- 6.4.23.13 (former 6.4.23.11) In the introductory sentence replace "approval certificate" with "certificate of approval" and in (i) replace "quality assurance programme" with "management system".

### 6.4.23.14 Insert a new paragraph to read as follows:

- "6.4.23.14 Each certificate of approval issued by a competent authority for material excepted from classification as "FISSILE" shall include the following information:
  - (a) Type of certificate;
  - (b) The competent authority identification mark;
  - (c) The issue date and an expiry date;
  - (d) List of applicable national and international regulations, including the edition of the IAEA Regulations for the Safe Transport of Radioactive Material under which the exception is approved;
  - (e) A description of the excepted material;
  - (f) Limiting specifications for the excepted material;
  - (g) A specification of the applicable management system as required in 1.5.3.1;
  - (h) Reference to information provided by the applicant relating to specific actions to be taken prior to shipment;
  - (i) If deemed appropriate by the competent authority, reference to the identity of the applicant;
  - (j) Signature and identification of the certifying official;
  - (k) Reference to documentation that demonstrates compliance with 2.7.2.3.6."

Current paragraphs 6.4.23.12 to 6.4.23.14 become new paragraphs 6.4.23.15 to 6.4.23.17.

- 6.4.23.15 (former 6.4.23.12), in the introductory sentence replace "approval certificate" with "certificate of approval".
- 6.4.23.15 (former 6.4.23.12) (j), replace "amounts" with "mass" and amend the end of the paragraph to read as follows: "... special form radioactive material, low dispersible radioactive material or fissile material excepted under 2.7.2.3.5.6 if applicable;".
- 6.4.23.15 (former 6.4.23.12) (k)(v), replace "6.4.11.4 (b)" with "6.4.11.5(b)".
- 6.4.23.15 (former 6.4.23.12) (r), replace "quality assurance programme" with "management system".
- 6.4.23.16 (former 6.4.23.13), in the introductory sentence, replace "approval certificate" with "certificate of approval".
- 6.4.23.16 (former 6.4.23.13) (i), replace "design approval certificate(s)" with "certificate(s) of approval of design".

- 6.4.23.16 (former 6.4.23.13) (g), replace "amounts" with "mass" and amend the end of the paragraph to read as follows: "...special form radioactive material, low dispersible radioactive material or fissile material excepted under 2.7.2.3.5.6 if applicable;".
- 6.4.23.16 (former 6.4.23.13) (I), replace "quality assurance programme" with "management system".
- 6.4.23.17 (former 6.4.23.14), in the introductory sentence, replace "approval certificate" with "certificate of approval".
- 6.4.23.17 (former 6.4.23.14) (h), replace "shipment approval" with "approval of shipment".
- 6.4.23.17 (former 6.4.23.14) (I), amend the end of the second sentence to read as follows: "... mass in grams (for fissile material the total mass of fissile nuclides or the mass for each fissile nuclide, when appropriate) and whether special form radioactive material, low dispersible radioactive material or fissile material excepted under 2.7.2.3.5.6, if applicable:".
- 6.4.23.17 (former 6.4.23.14) (n), amend the introductory sentence to read as follows: "For package designs containing fissile material which require multilateral approval of the package design in accordance with 6.4.22.4:".
- 6.4.23.17 (former 6.4.23.14) (n)(vi), replace "6.4.11.4 (b)" with "6.4.11.5 (b)".
- 6.4.23.17 (former 6.4.23.14) (t), replace "quality assurance programme" with "management system".
- 6.4.23.18 Insert a new paragraph 6.4.23.18 to read as follows:
  - "6.4.23.18 Each certificate issued by a competent authority for alternative activity limits for an exempt consignment of instruments or articles according to 5.1.5.2.1.4 shall include the following information:
    - (a) Type of certificate;
    - (b) The competent authority identification mark;
    - (c) The issue date and an expiry date;
    - (d) List of applicable national and international regulations, including the edition of the IAEA Regulations for the Safe Transport of Radioactive Material under which the exemption is approved;
    - (e) The identification of the instrument or article:
    - (f) A description of the instrument or article;
    - (g) Design specifications for the instrument or article;
    - (h) A specification of the radionuclide(s), the approved alternative activity limit(s) for the exempt consignment(s) of the instrument(s) or article(s);

- (i) Reference to documentation that demonstrates compliance with 2.7.2.2.2.2;
- (j) If deemed appropriate by the competent authority, reference to the identity of the applicant;
- (k) Signature and identification of the certifying official."

Current paragraphs 6.4.23.15 and 6.4.23.16 become 6.4.23.19 and 6.4.23.20 respectively.

#### 6.4.24 Transitional measures for class 7

#### 6.4.24.1 Amend to read as follows:

"Packages not requiring competent authority approval of design (excepted packages, Type IP-1, Type IP-2, Type IP-3 and Type A packages) shall meet these Regulations in full, except that packages that meet the requirements of the 1985 or 1985 (as amended 1990) Editions of IAEA Regulations for the Safe Transport of Radioactive Material (IAEA Safety Series No.6):

- May continue in transport provided that they were prepared for transport prior to 31 December 2003, and subject to the requirements of 6.4.24.4, if applicable;
- (b) May continue to be used provided that:
  - (i) They were not designed to contain uranium hexafluoride;
  - (ii) The applicable requirements of 1.5.3.1 of this Code are applied;
  - (iii) The activity limits and classification in Chapter 2.7 of these Regulations are applied:
  - (iv) The requirements and controls for transport in Parts 1, 3, 4, 5 and 7 of this Code are applied;
  - (v) The packaging was not manufactured or modified after 31 December 2003."

#### 6.4.24.2 Amend to read as follows:

- "6.4.24.2 Packages requiring competent authority approval of the design shall meet the provisions of this Code in full unless the following conditions are met:
  - (a) The packagings were manufactured to a package design approved by the competent authority under the provisions of the 1973 or 1973 (as amended) or the 1985 or 1985 (as amended 1990) Editions of IAEA Safety Series No.6);
  - (b) The package design is subject to multilateral approval;
  - (c) The applicable requirements of 1.5.3.1 of this Code are applied;

- (d) The activity limits and classification in Chapter 2.7 of this Code are applied;
- (e) The requirements and controls for transport in in Parts 1, 3, 4,5 and 7 of this Code are applied;
- (f) For a package containing fissile material and transported by air, the requirement of 6.4.11.11 is met;
- (g) For packages that meet the requirements of the 1973 or 1973 (as amended) Editions of IAEA Safety Series No. 6:
  - (i) The packages retain sufficient shielding to ensure that the radiation level at 1 m from the surface of the package would not exceed 10 mSv/h in the accident conditions of transport defined in the 1973 Revised or 1973 Revised (as amended) Editions of IAEA Safety Series No.6 with the maximum radioactive contents which the package is authorized to contain;
  - (ii) The packages do not utilize continuous venting;
  - (iii) A serial number in accordance with the provision of 5.2.1.5.5 is assigned to and marked on the outside of each packaging."

#### 6.4.24.3 Amend to read as follows:

"No new manufacture of packagings to a package design meeting the provisions of the 1973, 1973 (as amended), 1985, and 1985 (as amended 1990) Editions of IAEA Safety Series No.6 shall be permitted to commence."

- 6.4.24.4 Insert a new paragraph to read as follows:
  - "6.4.24.4 Packages excepted from the requirements for fissile materials under the Regulations annexed to the 16th revised edition or the seventeenth revised edition of the United Nations Recommendations on the Transport of Dangerous Goods (2009 Edition of IAEA Safety Standard Series No.TS-R-1)
  - 6.4.24.4 Packages containing fissile material that is excepted from classification as "FISSILE" according to 2.7.2.3.5.1 (i) or (iii) of the IMDG Code amendment 35-10) or amendment 36-12, (paragraphs 417 (a) (i) or (iii) of the 2009 Edition of IAEA Regulations for the Safe Transport of Radioactive Material) prepared for transport before 31 December 2014 may continue in transport and may continue to be classified as non-fissile or fissile-excepted except that the consignment limits in table 2.7.2.3.5 of these editions shall apply to the conveyance. The consignment shall be transported under exclusive use."

and current paragraph 6.4.24.4 becomes new 6.4.24.5.

6.4.24.5 (former 6.4.24.4) In the first sentence, replace "programme of quality assurance" with "management system". Replace the last sentence with the following: "No new manufacture of such special form radioactive material shall be permitted to commence."

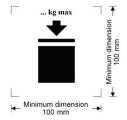

# Chapter 6.5 – Provisions for the construction and testing of intermediate bulk containers (IBCs)

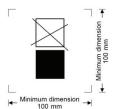

#### 6.5.2 Marking

#### 6.5.2.2 Additional marking

Amend 6.5.2.2.2 to read as follows:

"6.5.2.2.2 The maximum permitted stacking load applicable when the IBC is in use shall be displayed on a symbol as shown in the figures below. The symbol shall be durable and clearly visible.

IBCs capable of being stacked

IBCs NOT capable of being stacked

The minimum dimensions shall be 100 mm x 100 mm. The letters and numbers indicating the mass shall be at least 12 mm high. The area within the printer's marks indicated by the dimensional arrows shall be square. Where dimensions are not specified, all features shall be in approximate proportion to those shown. The mass marked above the symbol shall not exceed the load imposed during the design type test (see 6.5.6.6.4) divided by 1.8.

**NOTE:** The provisions of 6.5.2.2.2 shall apply to all IBCs manufactured, repaired or remanufactured as from 1 January 2011. The provisions of 6.5.2.2.2 of the IMDG Code (Amendment 36-12) may continue to be applied to all IBCs manufactured, repaired or remanufactured between 1 January 2011 and 31 December 2016."

6.5.2.2.4 After "The date of the manufacture of the plastics inner receptacle may alternatively be marked on the inner receptacle adjacent to the remainder of the marking." add the following new sentence: "In such a case, the two digits of the year in the primary marking and in the inner circle of the clock shall be identical.". At the end, add a new "Note" to read as follows:

"Note: Other methods that provide the minimum required information in a durable, visible and legible form are also acceptable."

#### Chapter 6.6 – Provisions for the construction and testing of large packagings

#### 6.6.2 Code for designating types of large packagings

6.6.2.2 At the beginning, replace "The letter "W"" with "The letters "T" or "W"" and insert a new second sentence to read as follows: "The letter "T" signifies a large salvage packaging conforming to the requirements of 6.6.5.1.9."

#### 6.6.3 Marking

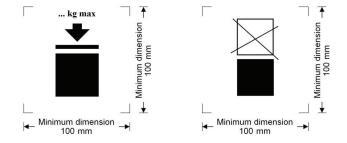

6.6.3.2 Insert a new second example to read as follows:

For a large steel salvage packaging suitable for stacking; stacking load: 2 500 kg; maximum gross mass: 1,000 kg."

Amend 6.6.3.3 to read as follows:

"6.6.3.3 The maximum permitted stacking load applicable when the large packaging is in use shall be displayed on a symbol as shown in the figures below. The symbol shall be durable and clearly visible.

Large packagings capable of being stacked

Large packagings NOT capable of being stacked

The minimum dimensions shall be 100 mm x 100 mm. The letters and numbers indicating the mass shall be at least 12 mm high. The area within the printer's marks indicated by the dimensional arrows shall be square. Where dimensions are not specified, all features shall be in approximate proportion to those shown. The mass marked above the symbol shall not exceed the load imposed during the design type test (see 6.6.5.3.3.4) divided by 1.8.

"NOTE: The provisions of 6.6.3.3 shall apply to all large packagings manufactured, repaired or remanufactured as from 1 January 2015. The provisions of 6.6.3.3 of the IMDG Code (Amendment 36-12) may continue to be applied to all IBCs manufactured, repaired or remanufactured between 1 January 2015 and 31 December 2016."

## 6.6.5 Test provisions for large packagings

#### 6.6.5.1 Performance and frequency of test

6.6.5.1.9 Insert the following new paragraph to read as follows:

"6.6.5.1.9 Large salvage packagings

Large salvage packagings shall be tested and marked in accordance with the provisions applicable to packing group II large packagings intended for the transport of solids or inner packagings, except as follows:

- (a) The test substance used in performing the tests shall be water, and the large salvage packagings shall be filled to not less than 98% of their maximum capacity. It is permissible to use additives, such as bags of lead shot, to achieve the requisite total package mass so long as they are placed so that the test results are not affected. Alternatively, in performing the drop test, the drop height may be varied in accordance with 6.6.5.3.4.4.2 (b);
- (b) Large salvage packagings shall, in addition, have been successfully subjected to the leakproofness test at 30 kPa, with the results of this test reflected in the test report required by 6.6.5.4; and
- (c) Large salvage packagings shall be marked with the letter "T" as described in 6.6.2.2."
- Chapter 6.7 Provisions for the design, construction, inspection and testing of portable tanks and multiple-element gas containers (ME GCs)
- 6.7.2 Provisions for the design, construction, inspection and testing of portable tanks intended for the transport of substances of class 1 and classes 3 to 9
- 6.7.2.20.2, 6.7.3.16.2 and 6.7.5.13.2 Replace "shall be marked" with "shall be durably marked".
- 6.7.5 Provisions for the design, construction, inspection and testing of multiple-element gas containers (MEGCs) intended for the transport of non-refrigerated gases
- 6.7.5.2.4.1 Replace "ISO 11114-1:1997" with "ISO 11114-1:2012".

# Chapter 6.9 - Provisions for the design, construction, inspection and testing of bulk containers

6.9.4.6 Delete the footnote "\*" assigned to BK, and insert the following note at the end:

**Note:** "(x)" shall be replaced with "1" or "2", as appropriate.

# PART 7 PROVISIONS CONCERNING TRANSPORT OPERATIONS

#### Chapter 7.1 – General stowage provisions

- 7.1.3 Stowage categories
- 7.1.3.1 Stowage categories for class 1
- 7.1.3.1 In the paragraph replace the words "column 16" with "16a".
- 7.1.3.2 Stowage categories for classes 2 to 9
- 7.1.3.2 In the paragraph replace the words "column 16" with "16a".
- 7.1.4 Special stowage provisions
- 7.1.4.1 Stowage of empty uncleaned packagings, including IBCs and large packagings
- 7.1.4.1 In the paragraph replace the words "column 16" with "16a"
- 7.1.4.5 Stowage of goods of class 7
- 7.1.4.5.2 Replace "approval certificate" with "certificate of approval".
- 7.1.4.5.3.1 In the table amend the two first rows under the heading to read as follows:

| Freight container       |    |
|-------------------------|----|
| Small freight container | 50 |
| Large freight container | 50 |

and in the note "a" to the table, replace "7.1.4.5.6" with "7.1.4.5.5".

#### 7.1.4.5.3.4 In the table amend the two first rows under the heading to read as follows:

| Freight container       |    |     |
|-------------------------|----|-----|
| Small freight container | 50 | n.a |
| Large freight container | 50 | 100 |

Amend the end of note "b" to the table to read as follows: "... and stowed so as to maintain a spacing of at least 6 m from other groups."

and amend the end of the first sentence of note "c" to the table to read as follows: "... and stowed so as to maintain a spacing of at least 6 m from other groups."

- 7.1.4.5.10 Amend the end of the paragraph to read as follows:
  - "... and shall not be re-used unless the following conditions are fulfilled:
  - .1 the non-fixed contamination shall not exceed the limits specified in 4.1.9.1.2;

- .2 the radiation level resulting from the fixed contamination shall not exceed 5  $\mu Sv/h$  at the surface."
- 7.1.4.5.13.2 Delete " to the critical group".

# 7.1.5 Stowage Codes

7.1.5 Insert a new 7.1.5 with the following:

### "7.1.5 Stowage Codes

The stowage codes given in column 16a of the dangerous goods list are as specified below:

| Stowage<br>Code | Description                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SW1             | Protected from sources of heat.                                                                                                                                                                                                                                                                                                                                                                  |
| SW2             | Clear of living quarters.                                                                                                                                                                                                                                                                                                                                                                        |
| SW3             | Shall be transported under temperature control.                                                                                                                                                                                                                                                                                                                                                  |
| SW4             | Surface ventilation is required to assist in removing any residual solvent vapour.                                                                                                                                                                                                                                                                                                               |
| SW5             | If under deck, stow in a mechanically ventilated space.                                                                                                                                                                                                                                                                                                                                          |
| SW6             | When stowed under-deck, mechanical ventilation shall be in accordance with SOLAS regulation II-2/19 (II-2/54) for flammable liquids with flashpoint below 23°C c.c.                                                                                                                                                                                                                              |
| SW7             | As approved by the competent authorities of the countries involved in the shipment                                                                                                                                                                                                                                                                                                               |
| SW8             | Ventilation may be required. The possible need to open hatches in case of fire to provide maximum ventilation and to apply water in an emergency, and the consequent risk to the stability of the ship through flooding of the cargo spaces, shall be considered before loading.                                                                                                                 |
| SW9             | Provide a good through ventilation for bagged cargo. Double strip stowage is recommended. The illustration in 7.6.2.7.2.3 shows how this can be achieved. During the voyage regular temperature readings shall be taken at varying depths in the hold and recorded. If the temperature of the cargo exceeds the ambient temperature and continues to increase, ventilation shall be closed down. |

| Stowage<br>Code | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SW10            | Unless carried in closed cargo transport units, bales shall be properly covered by tarpaulins or the like. Cargo spaces shall be clean, dry and free from oil or grease. Ventilator cowls leading into the cargo space shall have sparking-preventing screens. All other openings, entrances and hatches leading to the cargo space shall be securely closed. During temporary interruption of loading, when the hatch remains uncovered, a fire-watch shall be kept. During loading or discharge, smoking in the vicinity shall be prohibited and fire-fighting appliances kept ready for immediate operation. |
| SW11            | Cargo transport units shall be shaded from direct sunlight. Packages in cargo transport units shall be stowed so as to allow for adequate air circulation throughout the cargo.                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| SW12            | taking account of any supplementary requirements specified in the transport documents.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| SW13            | taking account of any supplementary requirements specified in the competent authority approval certificate(s).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| SW14            | Category A only if the special stowage provisions of 7.4.1.4 and 7.6.2.8.4 are complied with                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| SW15            | For metal drums, stowage category B.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| SW16            | For unit loads in open cargo transport units, stowage category B.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| SW17            | Category E, for closed cargo transport unit and pallet boxes only. Ventilation may be required. The possible need to open hatches in case of fire to provide maximum ventilation and to apply water in an emergency, and the consequent risk to the stability of the ship through flooding of the cargo space, shall be considered before loading.                                                                                                                                                                                                                                                              |
| SW18            | Category A, when transported in accordance with P650.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| SW19            | For batteries transported in accordance with SP 376 or SP 377 Category C, unless transported on a short international voyage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| SW20            | For uranyl nitrate hexahydrate solution stowage category D applies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| SW21            | For uranium metal pyrophoric and thorium metal pyrophoric stowage category D applies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| SW22            | For AEROSOLS with a maximum capacity of 1 litre: Category A. For AEROSOLS with a capacity above 1 litre: Category B. For WASTE AEROSOLS: Category C, Clear of living quarters.                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| SW23            | When transported in BK3 bulk container, see 7.6.2.12 and 7.7.3.9.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| SW24            | For special stowage provisions see 7.4.1.3 and 7.6.2.7.2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Stowage<br>Code | Description                                                      |
|-----------------|------------------------------------------------------------------|
| SW25            | For special stowage provisions see 7.6.2.7.3.                    |
| SW26            | For special stowage provisions see 7.4.1.4 and 7.6.2.11.1.1.     |
| SW27            | For special stowage provisions see 7.6.2.7.2.1.                  |
| SW28            | As approved by the competent authority of the country of origin. |

#### 7.1.6 Handling Codes

## 7.1.6 Insert a new 7.1.6 with the following:

## "7.1.6 Handling Codes

The handling codes given in column 16a of the dangerous goods list are as specified below:

| Handling<br>Codes | Description                                                                                                                                                                                                                                                                                                                                                              |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| H1                | Keep as dry as reasonably practicable                                                                                                                                                                                                                                                                                                                                    |
| H2                | Keep as cool as reasonably practicable                                                                                                                                                                                                                                                                                                                                   |
| H3                | During transport, it should be stowed (or kept) in a cool ventilated place                                                                                                                                                                                                                                                                                               |
| H4                | If cleaning of cargo spaces has to be carried out at sea, the safety procedures followed and standard of equipment used shall be at least as effective as those employed as industry best practice in a port. Until such cleaning is undertaken, the cargo spaces in which the asbestos has been carried shall be closed and access to those spaces shall be prohibited. |

#### Chapter 7.2 - General segregation provisions

## 7.2.3 Segregation provisions

- 7.2.3.1 In the paragraph, replace twice the words "column 16" with "column 16b".
- 7.2.3.4 In the paragraph, replace the words "column 16" with "column 16b".

## 7.2.4 Segregation table

in the row "Flammable gases 2.1" versus column of class 4.3 replace "X" with "2".

in the row "Flammable liquid 3" versus column of class 4.3 replace "1" with "2".

in the row "Substances which, in contact with water, emit flammable gases 4.3" versus column 2.1 replace "X" with "2".

I:\MSC\93\22-Add-2.doc

MSC 93/22/Add.2 Annex 8, page 210

in the row "Substances which, in contact with water, emit flammable gases 4.3" versus column 3 replace "1" with "2".

#### 7.2.5 Segregation groups

7.2.3.1 In the paragraph, replace the words "column 16 (stowage and segregation)" with "column 16b"

## 7.2.6 Special segregation provisions and exemptions

7.2.6.4 In the paragraph, replace the words "column 16" with "column 16b". and in "examples" replace "column 16" with "column 16b".

#### 7.2.8 Segregation Codes

7.2.8 Insert a new 7.2.8 with the following:

# "7.2.8 Segregation Codes

The segregation codes given in column 16b of the dangerous goods list are as specified below:

| Segregation<br>Codes | Description                                                                                   |
|----------------------|-----------------------------------------------------------------------------------------------|
| SG1                  | For packages carrying a subsidiary risk of class 1, segregation as for class 1, division 1.3. |
| SG2                  | Segregation as for class 1.2G                                                                 |
| SG3                  | Segregation as for Class 1.3G                                                                 |
| SG4                  | Segregation as for class 2.1                                                                  |
| SG5                  | Segregation as for class 3                                                                    |
| SG6                  | Segregation as for class 5.1                                                                  |
| SG7                  | Stow "away from" class 3                                                                      |
| SG8                  | Stow "away from" class 4.1                                                                    |
| SG9                  | Stow "away from" class 4.3                                                                    |
| SG10                 | Stow "away from" class 5.1                                                                    |
| SG11                 | Stow "away from" class 6.2                                                                    |
| SG12                 | Stow "away from" class 7                                                                      |
| SG13                 | Stow "away from" class 8                                                                      |

| Segregation<br>Codes | Description                                                                                                                                                                                                                                   |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SG14                 | Stow "separated from" class 1 except for division 1.4S                                                                                                                                                                                        |
| SG15                 | Stow "separated from" class 3                                                                                                                                                                                                                 |
| SG16                 | Stow "separated from" class 4.1                                                                                                                                                                                                               |
| SG17                 | Stow "separated from" class 5.1                                                                                                                                                                                                               |
| SG18                 | Stow "separated from" class 6.2                                                                                                                                                                                                               |
| SG19                 | Stow "separated from" class 7                                                                                                                                                                                                                 |
| SG20                 | Stow "away from" acids                                                                                                                                                                                                                        |
| SG21                 | Stow "away from" alkalis                                                                                                                                                                                                                      |
| SG22                 | Stow "away from" ammonium salts                                                                                                                                                                                                               |
| SG23                 | Stow "away from" animal or vegetable oils                                                                                                                                                                                                     |
| SG24                 | Stow "away from" azides                                                                                                                                                                                                                       |
| SG25                 | Stow "separated from" goods of classes 2.1 and 3.                                                                                                                                                                                             |
| SG26                 | In addition: from goods of classes 2.1 and 3 when stowed on deck of a containership a minimum distance of two container spaces athwartship shall be maintained, when stowed on ro-ro ships a distance of 6 m athwartship shall be maintained. |
| SG27                 | Stow "away from" explosives containing chlorates or perchlorates                                                                                                                                                                              |
| SG28                 | Stow "away from" ammonium compounds and explosives containing ammonium compounds or salts                                                                                                                                                     |
| SG29                 | Segregation from foodstuffs as in 7.3.4.2.2, 7.6.3.1.2 or 7.7.3.7.                                                                                                                                                                            |
| SG30                 | Stow "away from" heavy metals and their salts                                                                                                                                                                                                 |
| SG31                 | Stow "away from" lead and its compounds                                                                                                                                                                                                       |
| SG32                 | Stow "away from" liquid halogenated hydrocarbons                                                                                                                                                                                              |
| SG33                 | Stow "away from" powdered metals                                                                                                                                                                                                              |

# Annex Segregation flow chart

In the boxes, replace the words "column 16" with "column 16b",

# Chapter 7.3 – Consigning operations concerning the packing and use of cargo transport units (CTUs) and related provisions

## 7.3.2 General provisions for cargo transport units

7.3.2.2 In the paragraph delete reference to footnote "\* See IMO publication, sales number IB282E"

## 7.3.3 Packing of cargo transport units

- 7.3.3.1 The existing paragraph "7.3.3.1" is renumbered as "7.3.3.2".
- 7.3.3.1 Insert a new "7.3.3.1" with the following:
  - "7.3.3.1 Prior to the use of a cargo transport unit it shall be checked to ensure that it is apparently fit for its intended purpose\*."

and add the corresponding footnote as follows:

- "\* For safety approval plates and maintenance and examination of containers see the International Convention for Safe Containers, 1972, as amended annex I regulations 1 and 2 (see 1.1.2.3)."
- 7.3.3.2 The existing "7.3.3.2" is renumbered as "7.3.3.3", and at the end, the following new sentence is added:

"Whenever the handling provision "keep as dry as reasonably practicable" (H1) is assigned in column (16a) of the dangerous goods list, the cargo transport unit including any contained goods, securing or packing materials shall be kept as dry as reasonably practicable."

#### 7.3.4.2 Segregation in relation to foodstuffs

- 7.3.4.2.1 In the paragraph, replace the words "column 16" with "column 16b".
- 7.3.4.2.2 In subparagraph ".4", replace the words "column 16" with "column 16b".

#### 7.3.7 Cargo transport units under temperature control

#### 7.3.7.2 General provisions

- 7.3.7.2.4 Replace existing paragraph with the following:
  - "7.3.7.2.4 Prior to the use of cargo transport unit, the refrigeration system shall be subjected to a thorough inspection and a test to ensure that all parts are functioning properly.
  - 7.3.7.2.4.1 Refrigerant gas shall only be replaced in accordance with the manufacturer's operating instructions for the refrigeration system. Prior to filling replacement refrigerant gas, a certificate of analysis from the supplier shall be obtained and checked to confirm that the

TSFS 2015:66 Bilaga 2

RESOLUTION MSC.372(93)
(adopted on 22 May 2014)
AMENDMENTS TO THE INTERNATIONAL MARITIME
DANGEROUS GOODS (IMDG) CODE

Nedan anges de läkemedel och den medicinska utrustning som enligt 7 § i dessa föreskrifter ska finnas ombord på

I nedanstående tabeller visas de fastställda minimikraven för:

Fartyg med mer än 24 timmar till anlöpbar hamn där fullvärdig behandling kan ges. Fartyg som kan nå anlöpbar hamn där fullvärdig behandling kan ges inom 24 timmar. Kolumn C Fartyg som kan nå anlöpbar hamn där fullvärdig behandling kan ges inom 2 timmar.

| Läkemedel *                                                                                                                  | Beredningsform                                                                                                              |                                                                         | Fastställd minimikvantitet     |                                |               |

De förtecknade läkemedlen ska användas efter anvisning från Radio Medical. Etikettering, förvaring och fördelning av läkemedel ska i allmänhet vara i enlighet med IMGS (International Medical Guide for Ships). Innehållet och förvaringsförhållanden ska kontrolleras minst en gång per år med beaktande av tillverkarens angivna utgångsdatum och förvaringsinstruktioner. Förbrukade läkemedel ska ersättas så snart som möjligt.

† Angivna läkemedel är endast exempel. Det kan finnas motsvarande läkemedel från andra tillverkare med andra handelsnamn.

<sup>&</sup>quot;Minst 44 liter/200 bar andningsoxygen (syrgas) som ska bestå av minst föjande:

In En komplett portabel utrustning med cylinder 2 liter/200 bar syrgas klar för omedelbar användning samt en cylinder med 2 liter/200 bar i reserv.

1. En komplett portabel utrustning med cylinder 2 liter/200 bar syrgas klar för omedelbar användning samt en cylinder med 2 liter/200 bar i reserv.

2. En syrgascylinder med 40 liter/200 bar andningsoxygen (syrgas) (i fartygets sjukhytt monterad för omedelbart bruk) med en regulator som kan förse två personer samtidigt med syrgas. Om mer än en ej flyttbar syrgascylinder används så måste det finnas två regulatorer som kan förse två personer samtidigt med syrgas.
