| MSC 90/28/Add.3<br>ANNEX P             | Properties and Observations | (17)                   |                | Mixtures of non-dangerous solids (such as soil, sand, production materials, etc.) and toxic liquids. Toxic if swallowed, by skin contact or by inhalation. | Mixtures of non-dangerous solids (such as soil, sand, production materials, etc.) and corrosive liquids. Cause burns to skin, eyes and mucous membranes. |                                                                                                                                                         | Pate yellow liquid. Highly toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes. | Yellowish, odourless crystals. Soluble in water. Mixtures with combustible material are readily ignited and may burn flercely. Harmful if swallowed. | Category B. Clear of living quarters. Toxic if swallowed. by skin contact or by inhalation. | See entry above.                               | Category C. Clear of Ilving quarters. Toxic if swallowed, by skin contact or by dust inhalation. | See entry above.                      | Molten liquid, Melting point may be as low as 50°C. Toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes. | May explode if Involved in a fire under confined conditions. Sensitive to strong detonation shock.                                                                                      | Category D. Clear of living quarters. Flammable colourless gas. Heavier than air (1.8). | Colourles hygroscopic solid. Dangerous reaction with oxidizers. In the presence of mosture, reacts with alluminium, zinc, thi and their compounds, evolving hydrogen, a flammable gas, Causes burns to skin, eyes and mucous membranes. Reacts violently with acids. | Colourles y vellowish liquid. Insoluble in water. Strong garlic odour na<br>polyphine, Libbly the hast and gline is porhaenessly in air. Il innovived in a<br>fire evolves prosphine, a litammable and highly toxic gas. Restructive offerth<br>in the working parameter elementaries, hillogens, mitric oxides and carbon<br>tetrachloride. Irritating to mucous membranes. | Volatile frammable slightly yellow liquid with a pungent odour. Immiscible with water. Belling point: 7 To & 95'. Li Sahbouth between-15'C and—1CC. Exposure to light clauses immediate dangenous decomposition. Causes burns to skin, eyes and mucous membranes. |

| MSC 90/28/Add 3<br>ANNEX 4<br>Page 169 | Properties and Observations (17) |             | Polyester resin kits consist of two components: a base material (flammable liquid, packaging group II) and an activator (organic peroxide), each separately packed in an inner packaging. | See entry above.        | Filters may be small round pieces or large sheets. When involved in a fire, evolves toxic fumes; in closed compartments, these fumes may form an explosive mixture with air. Burns rapidly with intense heat adiation. |                     |                     |                     |                     | <ul> <li>Liquids ecoloing toxic vapour. React with acids or acid fumes, evolving<br/>hydrogen cyanide, a highly toxic and fiammable gas. Toxic if swallowed,<br/>by skin contact or by initiation.</li> </ul> | . See entry above.                                                              | Colouriess solution. Reacts violently with water. Causes burns to skin, eyes and mucous membranes. | Flammable liquids, evolving toxic vapour. Reart with acids or acid fumes, evolving hydrogen cyanide, a highly toxic and flammable gas. Miscible with water. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                                              | Category B. "Separated from" acids. Liquids, evolving toxic vapour. React with acids or acid fumes, evolving hydrogen conide, a highly toxic and flammable gas. Miscible with water. Toxic if swallowed, by skin contact or by inhalation. | s. See entry above.                                   |

Odourless. Liable to self-<br>heating or spontaneous combustion. | See entry above.                    | A moulding material consisting predominantly of polystyrene, polylmethy material consisting predominantly soft polysis of a volatile hydrocarbon which is predominantly pertain. During storage a snall proportion of his pertaine is released to the atmosphere; this a proportion increases at elevated temperatures.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | connection with the implementation of the Convention on the Prohibition and on their Destruction. The transport of substances under this entry said on their Destruction. The transport of substances under this entry specified by the Organization for the Prohibition of Chemical Wisepason. Specified by the Organization for the Prohibition of Chemical Wisepason. The been garned by the completent authority of the Director General of transport the possing prior approximation for the Prohibition of Chemical Wisepasons. During transport the packaging shall be accompanied by a copy of the document packaging shall be accompanied by a copy of the document packaging regular promisers. |                                    | Desensitized explosive. Red crystals. Insoluble in water. Explosive in the<br>transfer state. My form extremely settines compounds with Reavy metals or<br>their salts. When involved in a fire, evolves took from settines and<br>or apparaturents these furnes may form an explosive mixture with air.<br>Harmful if wallowed or by slivin contact. | Highly concentrated solution in water of a non-flammable, toxic and cornsyste swith a fungent odour, feer through this substance has a flammability hazard, it only exhibit such hazard under extreme fire conditions in confined axes. React solveinty with a decision, the substance in the conficulty with a decision the confined to the syes and mucous membranes. Affineating in low concentrations. | executized explores with futcase gluces or cellulosa. White solid soluble in water When incoloded in a fire the nitroplication may accumulate a repetion. Center and sproduces are explosed. Centeral with water may discolve the desensitizer flactose or glucesed, custing migration and accumulation of desensitizer flactose or glucesed, custing migration and accumulation of water introplection which may expole of Wito gleverin in some derise than water. When involved in a fire, solvies toxic futures; in closed accumulation of vapours may cause headed they dizzines and fainting. | Off-white clear liquid with a slight hydrocarbon odour. Reacts violently with acids. In contact with acids or if diluted with large amount of water evolves lydrogen gas and heat. Gauses burns to skin, eyes and mucous membranes. | See entry above.                                                                                                                                 |

Very high exposures may cause anaesthetic effects<br>and asphyxiation. | Liquefied, non-flammable, colourless gas with a faint ether-like odour.<br>Heavier than air (1.16). Very high exposures may cause anaesthetic effects<br>and asphyxiation. | White to yellow-white crystalline powder. Virtually odourless. Strong<br>reading agent Violent exothermic decomposition above 100° with<br>emission of large amounts of sulphur oxides, ammonia, carbon monoxie,<br>carbon closide, nitrogen oxides and hydrogen sulphide. Extended<br>sociation of the properties above 50°C and mosture may cause wishe<br>decomposition. Dust infating to skin, see and musous membranes. | See entry above.      | Hygros capic yellow powder with an unpleasant odour. | MSC 90/28/Add.3 ANNEX 4 ANNEX 174      | Properties and Observations | (47)    |            | See entry above.                                              | See entry above.                                              | Pesticdes frequently containing petroleum or coal tar distillates, or other filmmable liquids, Miscibility with water depends upon the composition. Took if swallowed, by skin contact or by inhaliation. | See entry above.                                                                                | They frequently contain petroleum or coal tar distillates, or other flammable liquids. Flashpoint and miscibility with water depend upon the composition. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                                                                                      | See entry above.                                                                                     | Liquid pesticides which present a very wide range of roxic hazard. Miscibility with water depends upon the composition. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                                               | See entry above.                                               | Solid pesticides present a very wide range of toxic hazard. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                         | See entry above.                         | Category B. Clear of living quarters. Miscibility with water depends upon the composition. Toxic if swallowed, by skin contact or by inhalation. |

Reacts with moisture, water or acids, evolving hydrogen, a flammable gas. When heated, evolves toxic vapours. | Category D. "Separated from" acids. Consists of metal alloyed with mercury. Contains 2% to 10% alkaline earth metals and may-contain up to 98% mercury. Reacts with moisture, water or acids, evolving hydrogen, a fiammable gas. When hearted, evolves toxic vapours. |

| MSC 90/28/Add.3<br>ANNEX 4<br>Page 184 | Properties and Observations (17) |                | Toxk if swallowed, by skin contact or by inhalation. | See entry above.                 | Colourless liquid with a pungent odour. Corrosive to most metals. Causes burns to skin, eyes and mucous membranes. | See entry above.                                                      | Reacts with acids or acid fumes, evolving hydrogen cyanide, a highly toxic and fiammable gas. Highly toxic if swallowed or by skin contact. | See entry above.                    | See entry above.                                     | Category B. "Separated from" acids. Reacts with acids or acid fumes, evolving hydrogen cyanide. a highly toxic 3414 and flammable gas. Highly toxic if swallowed or by skin contact. | See entry above.                                    | See entry above.                                     | Colouries liquid. Reacts with acids, evolving hydrogen fluoride, a toxic, irritating and corrosive gas, apparent as white fumes. Toxic if swallowed, by skin contact or by inhalation. | Liquid evolving irritating vapour ("Tear Gas"), Toxic if swallowed, by skin contact or by inhalation. | Crystals or powder, evolving irritating vapour (Tear Gas). Toxic if swallowed, by skin contact or by inhalation. | Toxic if swallowed, by skin contact or by inhalation. | White cystaline solid Meting point: 23°C. Highly corosive to most metals. Causes burns to skin, opes and nucous membranes. |

| MSC 90.28Add.3<br>ANNEX 4<br>Page 183  | Properties and Observations (17)     |             | White crystalline solid. Melting point: 28°C. Highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. | Decomposed by heat or acids, evolving hydrogen fluoride, a toxic, restructively irritation and corrosis uses appeared as white fumes, in the presence of moisture, highly corrosis to glass, other siliceous materials and most metal. Store if shallowed by shin contract or by inhalation. Causes burns to skin, eye and mucous membranes. | See entry above.                                                                              | . Decomposed by acids, evolving hydrogen fluoride, an infrating and corrosive gas . Toxic if swallowed, by skin contact or by inhalation. | . Very soluble in water. Reacts violently with acids. | commercial polactic is a Soft supported to the compercial polactic in the cooperation of the compercial polactic is a Soft supported to the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooperation of the cooper | See entry above.                                                                                                                                                                  | Colourless, deliquescent crystals. Melting point: 51°C. Corrosive to most metals. Harmful if swallowed. Causes burns to eyes and skin. | Toxic if swallowed, by skin contact or by inhalation.  | Colouriess crystalline solid, Melting point, 29°C. Immiscible with or insoluble in water. Toxic if swallowed, by skin contact or by inhalation. | Colouries solid with a pungent odour. Meting point: 23°C. Insoluble in water. Reads with water, evolving carbon dioxide. Toxic if swallowed, by skin contact or by inhalation. Irritating to skin, eyes and mucous membranes. | Brown liquid. Toxic if swallowed, by skin contact or by inhalation. | The commercial products are liquids with a pungent tar odour. Toxic if swallowed, by skin contact or by inhalation. | Low melting point (31°C to 32°C) solids with an aromatic odour. Insoluble in water. Toxic if swallowed, by skin contact or by inhalation. | Solid with perceptible odours. Insoluble in water, Harmful by ingestion or<br>Sylv for contact. If split ext are be set sistent bazac to the territoriement.<br>This entry covers anticles, such as rags, cotton waste, dothing, sawdust,<br>containing polychlorinated biphenyls where no free visible liquid is<br>present. |

| MSC 90/28 Add.3<br>ANNEX<br>Prov 186   | Properties and Observations (17) |         | Slightly miscible in water. Toxic if swallowed, by skin contact or by inhalation. | This entry covers solid hydrate and hexafluoroacetone. Melting point of the pure substance: 23°C. Toxic if swallowed, by skin contact or by inhalation. | White or pink crystals with a phenol-like odour, Melting point, 45°C to 68°C. Sliptily soluble in water, Decomposes when heated, evolving externely toxic fumes (phosgene). Toxic if swallowed, by skin contact or by Inhalaton. | Slightly soluble in water. Melting point 21°C (pure substance). Toxic if swallowed, by skin contact or by inhalation. | Solid, evolving toxic vapours. Reacts with acids or acid fumes, evolving hydrogen cyanide, a highly toxic and flammable gas. Soluble in water. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                    | See entry above.                                     | Toxic if swallowed, by skin contact or by inhalation. | See entry above.                      | See entry above.                       | Crystals, Melting point: 27'C to 53'C. May explode if involved in a fire.<br>Toxic if swallowed, by skin contact or by inhalation. | Solid with a penetrating odour. Liquid mixtures of various isomers of dichlorosalines, some of which in the pure state may be solid, with a melting point varying from 24°C to 72°C. Toxic if swallowed, by skin contact of by inhalation. | May explode if involved in a fire. Toxic if swallowed, by skin contact or by inhalation. | Deliques cent crystals or solids or pastes. Soluble in water. Toxic if swallowed, by skin contact or by inhalation. | Solid or paste. Soluble in water. Toxicif swallowed, by skin contact or by inhalation. |

Meting point, para-NTROTOLLIBNE 52°C to 54°C. Toxic if swallowed, by skin contact of by inhalation. | Yellow solid. Meting points: 4-NITRO-2-XYLENE: 29°C to 31°C, 5-NITRO-<br>3-XYLENE: 72°C to 74°C. Insoluble in water. Toxic if swallowed, by skin<br>contact or by inhalation. |                                        | . See entry above.                    | Volatile, yellow crystals evolving irritating vapours (Trear Gas"). Melting point: meta-BROMOBENZYL CYANIDE 25°C. Highly toxic if swallowed, by skin contact or by inhalation. | When pure, volatile, colourless crystals evolving an irritating vapour (Tear Gas.), Melting point: 41°C. Highly toxic if swallowed, by skin contact or by inhalation. | para-TOLUIDNE is solid in pure form, with a melting point of approximately 45°C. Toxic if swallowed, by skin contact or by inhalation. | 3.4-dimethylaniline is a solid, which has a melting point of 47C. Toxic if<br>swallowed, by skin contact or by dust inhalation. | Very deliquescent, crystalline solid. Melting point: 42°C. Soluble in water.<br>Mildly corrosive to most metals. | Yellow crystals or flakes, insoluble in water. Toxic if swallowed, by skin contact or by inhalation. | Light yellow solid. Soluble in water. Melling points of CRESOLS, ortho-<br>CRESOL: 30°C, para-CRESOL: 35°C. Toxf cif swallowd, by skin contact or<br>by inhalation. Cause burns to skin, eyes and mucous membranes. | Crystalline solid. Oxidant which may cause fire with organic materials (such as wood, straw, ext.). When involved in a fire, evolves toxic gases. In presence of moisture, highly corrotive to most metals. Causes burns to skin, eyes and muccous membranes. | Melting range 20°C to 40°C, insoluble in water. Oxidizing substance which may explode or burn fercely when in contact with organic materials. Toxic if swallowed, by skin contact or by inhalation. | Light reddish or amber crystals, Melting points; 38°C to 54°C. Insoluble in water. Toxic if swallowed, by skin contact or by inhalation. | Colouries to pale yellow crystals which may liquely under transport conditions. Meting points: 1-8ROMO-2-NITROBRIZEME: 43°C. 1-8ROMO-4-NITROBENZEME: 127°C. insoluble in water. Toxic if swallowed, by skin corract or by inhalation. | Solid which may liquefy under transport conditions. Strong odour.<br>Insoluble in water. Toxic if swallowed, by skin contact or by inhalation. |
