| MSC 90/28/Add.3<br>ANINEX  |            | Properties and Observations |                        | Insolube in water. May explode if involved in a fire under confined conditions, Swistiw to strong detonation shock. Harmful if swallowed or by skin contact.                                                                                                                                                                                                                          | Colouries, flammable liquid, Flashpoint. 20°C c.c. but widely variable, depending upon free ether content. Freezing point:-14°C. Decomposes in context with water, forming dimethyle their, a flammable gas. Causes burns to skin, eyes and micross membranes. | Colouriess liquid with a foul odour. Miscible with water. Decomposes when heated, evolving sulphur dioxide. Toxic if swallowed, by skin contact or by inhalation. | White crystalline powder. Soluble in water. Decomposes when heated, evolving toxic fumes. Causes burns to skin, eyes and mucous membranes. | Yellow powder. May evolve toxic, irritating or flammable fumes when wet, when involved in fire or in contact with acids. Requires certification from the shippur that the substance is not class 4.2. | Whole beans or meal. The latter is the residue remaining after the oil has been corrected from this seeds. Case the bean contain at powerful allegen which, by inhalation of dust or by skin cornet, with cushed bean quote, is, an give let so seever eithalion of the skin, we shad mancos membranes in some persons. They are also now, by the membranes in some persons. They are also now, by the maniform these products, wear at least a dust mask and googless. Avoid unnecessary skin contact. | See 1.5.1                                                                                          | See 1.5.1                                                                                          | Colouries, votatile liquid with an ethereal odour.  15 FCC. Explored limits, 25 FCC. Explored limits, 25 FC o 38. Rolling point: 25 FC o 38. Colliscible with water. Corrosive of alluminium. Toxic if maniforms, and water corrosive or alluminium and maniforms.  The control of the contact or by inhalation, irritating to eyes and mucous membranes. | Colouries I lquid. Slowly decomposes, evolving oxygen; the rate of decomposition increases in contact with metals, except aluminium. | Colourless liquids with a pungent odour. When involved in a fire evolve trost cases, Read volently with water, evolving hydrogen chloride, an irritating and corrosive gas. In the presence of moisture, highly corrosive to most metals. | Category C. Clear of living quarters. Colourless, flammable liquids with a pungent odour, immiscible with with the case and cast and colour standard by drogon chloride, an irritating and corrosive gas apparent as white fumes. When involved in a fire, evolve toxic gas, in the presence of mosture, highly corrosive to most metals. Cause burns to skin, eyes and mucous membranes. |
|                            |            | Stowage and Segregation     | 7.1 to 7.7             | Category D. Protected from sources of freat. Clean of living quarters. Keep as cool as reasonably practicable. Doring transport it shall be stored (or kep) in a cool and well writted place, the stored or kep) in a cool of class 1, segregation as for class in the cool of the stored or kep) and the stored or kep) and cool or class 1, segregation as for class in division. 3 | Category D. Clear of living quarters. Segregation as for class 3, but "Away from" classes 3, 4.1 and 8.                                                                                                                                                        | Category A.                                                                                                                                                       | Category A.                                                                                                                                | Category B. | MSC 90/28/Add.3<br>ANNEX 4<br>Page 142 | Properfies and Observations (17) |             | Colourless liquids with a pungent odour, immiscible with water. React colourless liquids with a pungent odour, immiscible with water. React corrosive as apparent as white fumes. When imoleed in a fine, evolve toxil gases. In the presence of mostume, highly corrosive to most metals. Cause burns to skin, eyes and microus membranes. | Colouries, very volatile liquids, flammable and corrosive, with a purgent door in miscole flat whit water faster or steam to produce heat which may lead to self-ignition; took and corrosive fumes to the light of the colouries with the evolved. May stead vigorously in contact with oxidizing substances, cause burns to skin, eyes and nuccon reminantes. | Fine white crystals or powder. Insoluble in water. Combustion can be 2 sustained, even in the absence of air. Harmful if swallowed. | See entry above.                                                               | (a) Class 2.2 compressed places: (a) Class 2.2 compressed places: (b) Class 2.2 compressed places: (b) Class 2.2 compressed places: (b) Class 2.2 compressed places: (c) Class 2.2 compressed places must be packed in plastic of fibriboard inner (c) Class 2.2 consigned abstractes; (c) Class 2.2 consigned abstractes; (d) Fibris 2.2 consigned abstractes; (e) Sirike anywhere matches. |                                                                                       | . See entry above.                                                                          | Liquid pesticides which present a very wide range of toxic hazard. Miscibility with water depends upon the composition. Toxic if swallowed, by skin contact or by inhalation. | . See entry above.                                     | . See entry above.                                     | Category A. Clear of living quarters. Solid pesticides present a very wide range of toxic hazard. Toxic if swallowed, by skin contact or by inhalation. | . See entry above.                                     | . See entry above.                               | Series of metal plates immersed in dry potassium hydroxide in a closed creapacle. When electrically charged may case for through short-circuling of remnias. Batteries need not be individually marked and inguisted of remnias. Batteries need not be individually marked and inguisted for terminas. Batteries need not be individually marked and inguisted for terminas the state of the plate of the p | Waxed pellets, adequately stabilized powder, tablets or crystals. Highly toxic if swallowed, by skin contact or by inhalation. | . Colourless liquid with a garlic-like odour. Flashpoint: 49°C c.c. Immiscible with water. Harmful by Inhalation. Irritating to skin, eyes and mucous membranes. | Colourless, slightly viscous liquid with a mild odour. Miscible with water. Hamful if swallowed or by inhalation. Corrosive to skin, eyes and mucous membranes. | Colourless or pale yellow, oily liquid with a pungent odour. Flashpoint: 35°C to 45°C.c Explosive limits: 1,1% to 5,2%. Slightly soluble in water. Irritating to skin, eyes and mucous membranes. | . Liquefied, non-flammable, toxic and corrosive gas. Reacts with water. Corrosive to glass and to most metals, including steel. Heavier than air (1.4 at 20°C). Highly irritating to skin, eyes and mucous membranes. | Immiscible with water, lightes readily. When involved in a fire, evolves toxic finrous furner, for explosive in this state but damage to, or leakage from, a package may allow solvent to evaporate and thus leave the nitroglycerin in an explosive state. |

| MSC 90/28/Add.3<br>ANNEX 4<br>Page 157 | Properties and Observations (17) |                | See entry above.                                                                  | See entry above.                                                             | A wide range of colour less to pale straw-coloured liquids with penetrating odours (sometimes camphor-like). Liquids slightly miscible with water. Cause burns to skin, eyes and mucous membranes. | See entry above.                                                    | See entry above.                                                     | Category B. Clear of living quarters. A wide watery of toxic solids. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                                      | See entry above.                                      | A wide range of corrosive solids or pastes. Causes burns to skin, eyes and mucous membranes. | See entry above.                                                              | See entry above.                                                              |                                       |                                       |                                       | Colourless liquid. Carried as an aqueous solution. Slowly decomposes, when you you far fast of decomposition increases on connext. with most metals. In contact with combustible material may cause first, wasts to start, eyes and mucous membranes. Even though stabilized, these solutions may evolve oxygen. | Various small devices used for cosmetic and other purposes, and their refills.                           |

| MSC 90/28/Add 3<br>ANNEX 4<br>Page 158 | Properties and Observations (17) |                | Viscous liquids with a perceptible odour. Harmful by ingestion or by skin 2 contact. This entry also covers articles, such as transformers and condenses, containing its containing to making the figuid polyhalogenated biphenyls or polyhalogenated terphenyls. | Solid with a perceptible odour. Metting point of solids varies from 2°C to 2.169°C Laterful by Ingaton or by Stinc contact. This entry cover startiles, such as rags, cotton wasts, clothing, sawdust, containing polyhalogen |                                       | . Explosive limits: 7% to 73%. Much heavier than air (6.4).<br>Boiling point: 1 2°C. | Toxic if swallowed, by skin contact or by dust inhalation. |                                        |                                      |                                       | Non-flammable gas with a mild ether-like odour. Much heavier than air (3.5). |                                              | - 5                                   | - 4                                   |                            | Articles containing non-flammable, non-toxic gas necessary for their operation.      | The mixture is miscible with water and may react dangerously with 3 oxidizing substances. The mixture is highly toxic if swallowed, by skin as contact or phinalation. Causes burns to skin, eyes and mucous membranes. | Type of articles transported under this entry include internal combustion refraits, compression ignition engines, fuel tel powered engines, motor verifiets, exporters and boars. "F.D.; 5-U for gases or F.S.=For liquids.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
