| MSC 90/28/Add.3<br>ANNIX 4<br>Page 42 | Properties and Observations (17) |            | Colourless, very volatile, flammable and corrosive liquid.  137C Reads with varie of team to produce heat, which may lead to self-ignition; toxic and corrosive fumes will be evolved. May react vigorously in central with oxidizing substances. Causes burns to skin, eyes and mucous membranes. | Colourless liquid with a strong ammonia-like odour, Flashpoint: –11°C c.c.<br>Explosive limits: 1.2% to 8%. Miscible with water. Harmful by inhalation.<br>Causes burns to skin and eyes. Irritating to mucous membranes. | Aqueous solution of a flammable gas with an ammonia-like odour.  This priporint depending on percentage of sissolved gas. Many react explosively with mercury. Miscible with water An aqueous solution of 45% TRIMETHY ANNE, by mass, has a flashpoint of ~45°C cc, and a boiling point of 30°C applicable to PG I only). Harmful by inhalation.  Gases burns to skin, eyes and mucous mentiones. | See entry above.                                                                     | expectly A Clear of Iving quarters. See entry above, irritating to skin, eyes and mucous membranes.<br>Spatiand from metury and<br>metury compounds. | Colouries: Ilquid, Flashpoint: below-18°C c.c. Explosive limits: 1.8% to 6%.<br>Immiscible, with water; Readily hydrolysed by miniscible, with water; Readily hydrolysed by moisture, evolving hydrogen folioride; a took and corrosive gas. Causes: burns to skin, eyes and mucous membranes. | Colourless liquid. Flashpoint: 35°C c.c. Mixture of resin and volatile oils.<br>Immiscible with water. | immiscible with water.     | See entry above.           | Colourless to light yellow liquid, flashpoint: -8°C c.c. Explosive limits: 2.6% to 14%. Immiscible with water. | Colourless liquid. Flashpoint: below-18°C.c.: Explosive limits: 1,7% to 28%. Boiling point: 33°C. Immiscible with water. Extremely reactive; may polymerize. | Colourless to straw-coloured, volatile liquid with a sweet odour.<br>Flashpoint: -28°C c.c. Explosive limits: 6.5% to 15.5%.<br>Bolling point: 32°C, immiscible with water. | Colourless liquid. Flashpoint: –9'C o.c. Immiscible with water. | Colouries, pale yellow or pink liquid with a purgent odour. Flashpoint: T.C. & Diolova Hints; 35 for, bardily hydrolyse by most burst, evening the topic of the purple of the second proper of the proper of the proper of the presence of moisture, corrosive to miss metals with water, in the presence of moisture, corrosive to most metals. | Miscibility with water depends upon the composition. Hamful by inhalation. |

| MSC 90.28/Add.3<br>ANNIKY 4<br>Page 43 | Properties and Observations (17) |             | See entry above.                | Colourless liquids. Flashpoint: 17°C to 23°C c.c.<br>Explosive limits: 1.1% to 7%. Immiscible with water. | See entry above. Flashpoint: 23°C to 30°C c.c. | Finely divided zirconlum metal in a flammable liquid.<br>Immiscible with water. Spillage is liable to self-ignition. | See entry above.                                | See entry above.                                | the counted to possess the property of evolving prices of when in contact with water, especially seasoner; if treated with oil or own it deas, and offensy therefore a fordinary trendanties, factor and offensy trendanties, and animality assaulter; if treated with oil or own it deas, evolving hydrogen, a flammable gas, Reads; exality with iron oxide polying hydrogen, a flammable gas, Reads; exality with iron oxide polying substances in the event of breakage of receptacles, the scattered powder explosive as made a garden or present of breakage of receptacles, the scattered powder explosive among the most plants. | See entry above.                                                                                                                                                          | Desensitized explosive. Substance in pure form consists of yellow crystals.<br>Explosive and sensitive to friction in the dry state. May form extremely<br>sensitive compounds with heavy metals or their salts. Harmful if<br>swallowed or by skin contact. | White, translucent lumps. Camphor-like odour, insoluble in water.<br>Harmful by ingestion. | Yellowish-white, amorphous powder or lumps, insoluble in water.<br>Llable to spontaneous heating. Irritating to skin and mucous membranes. | Yellowish-white, amorphous powder or lumps, Insoluble in water.<br>Liable to spontaneous heating. Irritating to skin and mucous membranes. | Dark brownish-black solid. Insoluble in water. Readily combustible; may ignite spontaneously if contaminated with vegetable fibres (such as cotton). Irritating to skin and mucous membranes. | Desensitized explosive. Substance when pure consists of yellow crystals. Slightly soluble in water. May form extremely sensitive compounds with heavy metals or their sails. Toxic if swallowed, by skin contact or by inhalation. | Desensitized explosives. Explosive and sensitive to friction in the dry state. May form extremely sensitive compounds with heavy metals or their salts. Toxic if swallowed, by skin contact or by inhalation. |

| MSC 90/28/Add.3 ANNEX 4 ANNEX 4 Pigo 44 | Properties and Observations | (77)                 |                | Desensitized explosive. Explosive when dry. May form extremely sentitive compounds with heavy metals or their salts. Harmful if swallowed or by skin contact. | Alloy derived from cerum or mischmetal, with the addition of 10% to 65% iron. Emits sparks when struck. | ignites readily. When involved in a fire, evolves toxic fumes; in closed compartments, these fumes may form an explosive mixture with air. |                                       |                                       | insoluble in water, Libble to spontaneous combustion when dry. Forms explosive mixtures with oxidizing substances.                                                                                          | contaminated with oil. Refuse for shipment when loose, damp, wet or contaminated with oil.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | White, crystalline powder. Soluble in water. | Very dark brown solid. Insoluble in water. Liable to spontaneous heating.<br>Irritating to skin, eyes and mucous membranes. | Ignite by friction; prepared surface is not required. | White crystals, powder or tablets. Insoluble in water. Harmful if swallowed or by dust inhalation. | Contains 94%-99% rare earth metals. In contact with water or moist air, volves hydrogen, a flammable gas. Emits sparks when scratched or struck. | Crystalline flakes or powder with a persistent odour. Evolves flammable vapours at, or below, its melting point. |

|                      | Properties and observations (17) |         | Desensitized explosive. White solid. When Involved in a fire, evolves toxic fumes; in closed compartments, these fumes may form an explosive mixture with air. May form extremely sensitive compounds with heavy metals or their saits. | Desensitized explosive. Orange powder. Explosive and sensitive to friction in the dry state. When involved in a frie, evolves toxic furnes; in closed compartments these furnes may form an explosive mixture with air. May form extremely sensitive compounds with heavy metals or their salts. | Reddish–brown powder. Insoluble in water. Ignites readily by friction. When involved in a fire, evolves irritating fumes. Forms explosive mixtures with oxidizing substances. Harmful if swallowed or by dust inhalation. | Yellow solid. ignites readily by friction. Develops heat in contact with moist air, evolving toxic and flammable gases. Forms explosive mixtures with oxidizing substances. Harmful if swallowed or by dust inhalation. | Vellow solid ignites readily by friction. Develops heat in contact with moist air, evolving toxic and flammable gases. Forms explosive mixtures with oxidizing substances. Harmful if swallowed or by dust inhalation. | Yellow solid. ignites readily by friction. Develops heat in contact with moist air, evolving toxic and flammable gases. Forms explosive mixtures with oxidizing substances. Harmful if swallowed or by dust inhalation. | Yellow solid. Ignites readily by friction. Develops heat in contact with moist air, evolving toxic and flammable gases. Forms explosive mixtures with oxidizing substances. Harmful if swallowed or by dust inhalation. | Desensitized explosive. Substance in pure form consists of yellow crystals. Soluble in water. Explose and sensitive to friction in the dry state. May form extremely sensitive compounds with heavy metals or their salts. Harmful if swallowed or by skin contact. | Liable to spontaneous heating.                                                                                                                                                                         | Dark brown, non-metallic powder. Burns in air, when ignited; readily<br>flammable when mixed with oxidizing substances. | Desensitized explosive. Yellow crystals. Soluble in water. Explosive and destraint of finding the third is fishering of its submode of by skin contact, May form extremely sensitives compounds with Ready metals or the sails. Transport of SILVER PICAN III, day or wetted with less y than 30% water, by mass is problibited. | expendited explores, Sustance to prive from consists of yellow powder.<br>Explosious and strainties to firting in the dry state. May form extremely<br>extract ecomposalists with heavy metals for first all stars. May form extremely<br>first, evolves toxic furnes; in closed compariments, these furnes may form<br>for evolves toxic furnes; in closed compariments, these furnes may form<br>the publisher mixture with air. Toxic if swallowed, by skin contact or by<br>inhalation. | Desensitized explosive. Substance in pure form consists of yellow powder.<br>Spoksow and Sentime for fiction in red of years. Who form externely<br>sensitive compounds with beay, metals or their salts. When involved in a<br>state evoles socid times; in closed compartments, when involved in an<br>an explosive mixture with air Harmful if swallowed or by skin contact. | Category. A Protected from sources. When innoheding its discondex covery intaining and sufficienting gas.<br>of hear. Substance in pure form consists of yellow crystals. When involved in a fire, evolves toxic furmes; in closed compartments these furmes may form an explosive mixture with air. Explosive and sensitive to friction in the dry state. May form extremely sensitive Toe board used in the manufacture of boots and shoes. When involved in a fire, evolves toxic fumes; in closed compartments, these fumes may form an explosive mixture with air. Desentitude dexplosive, Substance in pure form consists of yellow crystals. Soluble in water, When movible of a fire, evolves toxic furnes, in closed compartments these furnes may form an explosive mixture with air. Exposive and sensitive for friction in the dry state, harmfull fixabilitieved only by skin contact. May form extremely sensitive compounds with heavy Grey powder. Insoluble in water. Liable to spontaneous combustion when dry. Forms explosive mixtures with oxidizing substances. Red to brown crystals. Reacts with acids or decomposes slowly in contact with water of damp air, evoling phospinine, a spontaneously flammable and highly toxic gas. Reacts violently with oxidizing substances. Toxic if swallowed, by skin contact or by inhalation. Desensitized explosive. Substance in pure form consists of white crystals. Soluble in water. When involved in a fire, evolves toxic fumes; in closed Black powder or granules. Liable to heat slowly and ignite spontaneously in air. The material as offered for shipment should have been sufficiently heat-treated and should be cooled down to ambient temperature before packing. Black powder or granules. Liable to heat slowly and ignite spontaneously in air. The material as offered for shipment should have been sufficiently heat-treated and should be cooled down to ambient temperature before packing. compounds with heavy metals or their salts. Harmful if swallowed or by Explosive and sensitive to friction in the dry state. May form extremely Dried kernels of coconuts, with a penetrating rancid odour which may taint other cargoes. form an explosive mixture with air Grey powder. Forms explosive mixtures with oxidizing substances. sensitive compounds with heavy metals or their salts. Properties and Observations (12) See entry above skin contact Category A. Keep as dayas associated by tracticable. Protected from sources of heat. Provide a good through writination for logged cargo. Double stip hostoges is recommended. The illustration in 76.2.7.7.3 shows this can be activeed. During the voyage regular improved. Category E. "Separated from" class 5.1. Category E. Under deck in a mechanically ventilated space. Clear of living quarters. "Separated Category E. "Separated from" class 5.1. Category E. "Away from" class 3 and heavy metals and their salts. Category E. | MSC 90/28/Add 3<br>ANNIKX 4<br>Page 47 | Properties and Observations (17) |             | Fibres of vegetable origin.                              | Readily combustible, liable to ignite spontaneously according to moisture content. | Dark green, crystalline solid, insoluble in water. Ignites spontaneously in air when dry. Harmful if swallowed. | Liable to ignite spontaneously according to moisture content. | Liable to ignite spontaneously according to the oil content.                 | Brown to greatish-brown product derived from old fish. Strong adour which may affect other cargo. Lable to heat and ignite spontaneously.                                                                                                                                                                                   | s ee entry above.                                                                                                                                                                       | Obtained from coal gas purification. Strong odour which may taint other cargo. Lable to heat and grints sportnersusity, May evolve hydrogen subjint disorder and puriogen synchrolide subjint disorder and puriogen synchrolide which are toxic gases. This substance should have been cooled and weakhered for not less than eight veeks before shipment, unless packed in a metal drum. | Liable to ignite spontaneously if dry.                      | Liable to ignite spontaneously. The provisions of this Code should not apply to manufactured articles properly aged. | Colourless liquid. Boiling point range: 48°C to 63°C. Ignites spontaneously in air. Decomposes in contact with water, evolving hydrogen, a flammable gas. Toxic if swallowed, by skin contact or by inhalation. | ignites spontaneously in air. Melting point: 44°C. Toxic if swallowed, by skin contact or by inhalation. Receptacles are usually filled with substance in the liquid state which subsequently solidifies. A sufficient uilage should be allowed. | Black solid, absorbs moisture to become crystalline. Liable to ignite spontaneously, in contact with acids, evolves hydrogen sulphide, a toxic and flammable gas. Reacts violently with acids. | Liable to ignite spontaneously in air.<br>If shaken, may produce sparks. In contact with water, evolve hydrogen, a<br>flammable gas. | White or grey crystalline powder.<br>Liable to hear and ignite spontaneously in air and to evolve sulphur<br>dioxide, an irritating gas. |
|                                        | Stowage and Segregation (16)     | 7.1 to 7.7  | Category A. Loning seeds. Josed mally as almaif led or fertillarer. The most
common seed, aleas include those derived from occount (toppa).

Common seed cales include those derived from occount (toppa).

Common seed, and a mally a mall a forming the ord forming the seed,
common seed, and the forming the seed, and they may be shipped in the form of cale, allage, pellets, mall and the seed and they may be supported or and stooky and, if we or containing an excessive proportion of the stooky and, if we or containing an excessive proportion of the property of the seed, and the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the seed of the Register mentaling after (this sheen vesticated by a obtain process or 13 exelled mentaling the form of lebenth section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of the section of section of the section of section of the section of section of the section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section of section o Consists of metal alloyed with mercury. Contains 2% to 10% alkaline earth metals and may contain up to 98% mercury. Reacts with moisture, water or acids, evolving hydrogen, a flammable gas. When heated, evolves toxic When containing a substantial proportion of alkaline earth metals, readily decomposed by water and reacts volently with acids, evolving hydrogen, which may be ignited by the heat of the reaction. Yellow crystals or powder. In contact with water, rapidly evolves methane, a flammable gas. Reacts violently with acids. Finely divided alkali or alkaline earth metal, suspended in a liquid. Reacts violently with moisture, water or acids, evolving hydrogen, which may be ignited by the heat of the reaction. able In contact with water, caustic alkalis or acids, evolves hydrogen, a flammable gas. When finely divided aluminium dust is scattered, it is easily ignited by naked lights, causing explosion. May explode when in contact with oxdlating substances. Reacts with liguid halogenated In contact with water, caustic alkalis or acids, evolves hydrogen, a fammable gas. Impurities may, under similar circumstances, produce phosphine and arsine, which are highly toxic gases. Silvery liquid, consisting of metal alloyed with mercury. Reacts with moisture, water or acids, evolving hydrogen, a flammable gas. When Small crystals. Decomposes in contact with water or acids, evolving ammonia vapour and producing highly caustic alkaline solutions. Liable to ignite spontaneously in air according to moisture content. In contact with acids, evolves hydrogen sulphide, a toxic Properties and Observations (12) gas. Reacts violently with acids. Category E. Clear of living quarters. "Separated from" acids. Category A. "Separated from" acids. Category D. "Separated from" acids. acids. Category D. "Separated from" acids. Category A. "Separated from" acids. Category A. Keep dry. Protected from sources of heat. | MSC 90/2                              | Properties and Observations (17) |          | See entry above.                                                                                   | Crystals or powder. Reacts with acids or decomposes slowly in contact with water or damp air, evolving phosphine, a spontaneously flammable and highly toxic gas. Reacts otheriny with oxidizing substances. Toxic if swellowed, by skin contact or by inhalation. | In contact with water, caustic alkalis or acids, generates heat and evolves hydrogen, a flammable gas. May also evolve silanes, which are toxic and may ignite spontaneously.                                       | Readily decomposes in water and reacts violently with acids, evolving hydrogen, which may be ignited by the heat of the reaction. Harmful if swallowed or by dust inhalation. | Readily decomposes in water and reacts violently with acids, evolving hydrogen, which may be ignited by the heat of the reaction. | Solid. In contact with water, rapidly evolves acetylene, a highly flammable gas, which may be ignited by the heat of the reaction. Acetylene forms highly explosive compounds with salts of some heavy metals. Reacts violently with acids. |                                     | Powder or granules, Contains calcium carbide as an impurity, in contact with water, evolves ammonia and acetylene, which is a highly flammable gas. Reacts vigorously with acids. | Solid. In contact with water, acids or moisture, evolves hydrogen, which may be ignited by the heat of the reaction. | In contact with water, evolves hydrogen, a flammable gas. If calcium carbide is present as an impurity, acetylere will also be evolved. In contact with acide evolves slane, a spontaneously flammable gas. | See entry above.                                                                                                                 | . White, ductile, soft metal. Reacts violently with moisture, water or acids, evolving hydrogen, which may be ignited by the heat of the reaction. Highly reactive, sometimes with explosive effect. | context, with motion term eather latter or calcid, may evolve had oppon, a filmmable eas, which may form explose entructive which are find the read footballes, which are highly took gasts. These gasts at one evolved in proportions which, under mechanically ventilated conditions which, under mechanically ventilated conditions with a material by a predeminant over the explosion hazard. The reads of the proportion may one the explosion hazard. The reads of as evolution is greatest from freshy broken surfaces, so it also the mass whenever the caso is disturbled, ext. As a during it is indicated by soft if swallowed, by skin contact or by vapour inhalation. | Solids. React with water, moisture or acids, evolving hydrogen, which may be ignited by the heat of the reaction. | See entry above.                                     |

| Properties and Observations | (17)     |             | White powder, in contact with water, acids or moisture, evolves hydrogen, which may be ignited by the heat of the reaction. | Clear, colourless solution of lithium aluminium hydride in ether. Reacts readily with water, evolving hydrogen, a flammable gas. Evaporates readily to leave a residue which is easily ignited by a spark or friction. | Crystalline, hygroscopic solid. In contact with water, acids and moisture evolves hydrogen, which may be ignited by the heat of the reaction. | Solid. In contact with water, acids or moisture, evolves hydrogen, which may be ignited by the heat of the reaction. | White, ductile, soft metal. Floats on water. Readily decomposes in water and a metarst olderly with adds, souldny plydogen, which may be lighted by the heat of the reaction. For fire-flighting purposes, dry thining heat with a system challed or graphite powder; system challed be graphite powder; should be carried on board when this substance is transported. | Shiny lumps, crystals or powder, with sharp instrating odour. Reacts readily with water, evolving hydrogen and silmer, flammable gases. Enough heat may be generated to ignite the gas mixture in air. | contact with motive, water or side, evolve hydrogen; allmmable gas, Magnesium datt is easily ignited, causing explosion. Nay socioles the Magnesium datt is easily ignited, causing explosion. Nay socioles when to comer with oxiding authorisets, for fire depliquing purposes, dry lithium chonde powder, day adolum chloride oxydes; double chould extra contact on board when this substance is transported. Reacts with liquid halogenated hydrocarbons. | See entry above.                                                                       | See entry above.                                                                 | Solid. Reacts with acids or decomposes slowly in contact with water or took of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of the size of | Soft, silvery metal liquid. Floats on water. Reacts violently with moisture, water or acids, evolving hydrogen, which may be ignited by the heat of the reaction. Highly reactive, sometimes with explosive effect. | Flows like mercury at ordinary temperatures, Not volatile, Reacts violently with moisture, water or acids, evolving hydrogen, a flammable gas, and developing considerable heat which may ignite the gas. | Soft, silvery metal liquid. Floats on water. Reacts violently with moisture, water or acids, evolving hydrogen, which may be ignited by the heat of the reaction. Highly reactive, sometimes with explosive effect. | Silvery-white, ductile, soft metal, Melting point, 39°C. Floats on water. Reacts violently with moisture, water or acids, evolving hydrogen, which may be ignited by the heat of the reaction. Highly reactive, sometimes with explosive effect. | Crystalline powder. In contact with water, acids or moisture, evolves hydrogen, which may be ignited by the heat of the reaction. | White powder. In contact with water, acids or moisture, evolves hydrogen, which may be ignited by the heat of the reaction. |
| Stowage and Segregation     | (16)     | 7.1 to 7.7  | Category E. "Separated from" acids.                                                                                         | Category D. Clear of living quarters.                                                                                                                                                                                  | Category E. "Separated from" acids.                                                                                                           | Category E. "Separated from" acids.                                                                                  | Category E. "Separated from" acids.                                                                                                                                                                                                                                                                                                                                     | Category A. Only to be loaded under dry weather conditions. Under deck in a mechanically ventilated space.                                                                                             | Category A. | ANDRAGA<br>ANDRAGA<br>Page 51      | Properties and Observations | (1)                |     | White, ductile, soft-metal. Floats on water. Reacts violently with moisture, water or acids, evolving hydrogen, which may be ignited by the heat of the reaction. Highly reactive, sometimes with explosive effect. | White, amorphous, free-flowing, hygroscopic powder. Decomposed by water to form methanol, a flammable liquid, which may be ignited by the heat of the reaction. Causes burns to skin, eyes and mucous membranes. | Solid. Reacts with acids or decomposes slowly in contact with water or redeming all evolving phosphines, a spontaneously flammable and highly toxic gas.  Toxic gas.  Toxic gas.  Toxic gas.  Toxic gas.  Toxic if swallowed, by skin contact or by inhalation. | Silver-white solid. Reacts with acids or decomposes slowly in contact with water or damp air, evolving phosphine, a spontaneously flammable and highly toxic gas. Reacts violently with oxidizing substances. Toxic if swallowed, by skin contact or by inhalation. | In contact with moisture or water, liable to evolve dangerous gases, including hydrogen, a flammable gas. | in contact with water, alkalis or acids, evolves hydrogen, a flammable gas.<br>Zinc dust is easily ignited, causing explosion. May explode when in<br>contact with oxidizing substances. | See entry above.                                | See entry above.                                | Black coloured powder. | Colourless or white crystals. Deliquescent. Soluble in water. Slightly corrosive. Mixtures with combustible material are readily ignited and may burn flercely. Harmful if swallowed. | Orange needles, Soluble in water, Mixtures with combustible material are readily ignited and may burn fletcely. May ignite spontaneously in contact with strong acids. Harmful if swallowed. | White crystals or powder. Soluble in water. When heated, decomposes readily, even with explosion, evolving toxir clumes. Forms highly explosive mixtures with combustible material or powdered metals. These mixtures are sensitive to friction and are liable to ignite. | White crystals or powder. Soluble in water. Mixtures with combustible material are sensitive to friction and are liable to ignite. | Portugues respective to proveter Reacts depositive, that ubtract acid. Reacts freety, while confidence have considered freety or some depositive than the respective instructs which controlled mental to make the manufact or animamonium compounds. | MSC 90/28740G.<br>ANNIKY P           | Properties and Observations | (,,)     | White crystals or powder, soluble in water, Reacts vigorously with subpuried acid, feach for freely with syndries when heated or by friction. May form explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are sensitive to friction and the able to grater. When involved in all free my cause an explosion. Toxic if swallowed, by skin contact or by dust inhalation. | Brownish-violet crystals. Soluble in water. Reacts vigorously with<br>wholly any order of the proper process of the state of the white confides when<br>heated or by friction. May form explosive mixtures with combastible<br>the state of the process of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the sta | White powder. Particularly if wetted with small quantities of water, a mixture with combustible material may ignite following impact of friction. When involved in a fire, or in contact with water or acids, decomposies, evolving oxygen. Toxic if swallowed, by skin contact or by dust imhalation. | when the state of the properties are stated as the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state | White powder. Mixtures with combustible material are readily ignited and may burn fiercely. Harmful if swallowed. | viporous la vibra to yellowsky halfquesent cytrals. Soluble in water Raacts viporously with sulphuric acid. Reacts flercely with cyonides when heated May form rectolosive mixtures with combustible material, prowdered metals or ammonium compounts. These mixture are sensitive to friction and are liable to ginter. When involved in a fire may cause an explosion. | vigorous y visuale diquescent crystals Souther in water, seventive to hear Reacts<br>vigorous y with sulphiric acid Reacts flercely with condies when heated<br>by Picticion. My form explotive mistures with constitution arterial,<br>powdered metals or ammonium compounds. These mixtures are sensitive<br>efficient and are liable to ignite. When involved in a fire may cause an<br>explosion. | White deliquescent solid, soluble in water. Mixtures with combustible material are readily ignited and may burn flercely. Harmful if swallowed. | White cystals or powder. Rexts vigorously with sulphuric acid. Rexts<br>freely with counters when heated or by fritton. May from explosive<br>mixtures with combustible material, powdered metals or ammonium<br>to proporate. The mixtures are servitive to fritten and are liable to<br>ignite. When innoved in a fire, may cause an explosion and | Reacts vigorously with sulphinic and and hydrogen provides Reacts<br>Reacts vigorously with sulphinic and and hydrogen provides Reacts<br>the recovery with combinity with the provides the provides reposite<br>mixtures with combisitible material, providered metals or ammonium<br>compounds; These maximum survives are restrict to friction and are liable to<br>lightle. When involved in a fire, may cause an explosion. | White or yellowish powder. Particularly if wetted with small quantities of water, a mixture with combustible material may ignite following impact or fiction. When involved in a file, or on contact with water or acids, decomposes, evolving oxygen. | Solid Reacts vigorously with sulphure acid. Reacts floreely with cyanides with reacts of the lates and the sale of the lates with combustible material, powdered metals or alway from explosive mixtures with combustible material, powdered metals or alway from mount or omyounds. These mixtures are strong and reach and the labbe to ignite. When involved in a fire, may exams an explosion. | See entry above.                                              |
|                                      | Stowage and Segregation     | 7.1b 7.7 | Category A. "Separated from" ammonium compounds and cyanides.                                                                                                                                                                                                                                                                                                                                                            | Category D. | MSC 90/28/Add.3<br>ANNEX 4<br>Page 53 | Properfies and Observations | (n)        | Deliquescent solid. Reacts vigorously with sulphuric acid. Reacts flercely with sounders when head of by fichious. May form egibosive mixtures with combustible material, powdered metals or ammonium compounds. These mixture as a restrict the first florid mixture as a restrict the first florid and are liable to ignite. When involved in a fire, may cause an explosion. | See entry above.                                                    | Solids. React vigorously with sulphuricacid. React flercely with cyanides when heated or by friction. May form explosive mixtures with combustible material powdered meals or ammonium compounds. These mixtures are sensitive to friction and are liable to ignite. When involved in a fire, may cause am explosion. Trans port of ammonium reliable to ignite. When whole and mixtures of a chindre with an ammonium salt is prohibited. | Solids, Reart idenously with subhurt, and Reart leave, with qualities when he has a beginning the service with combatible material providered materials or admensionant compounds. These matures are sentitive to friction and are liable to ignite. When involved in a first, may classe an explosion. Transport of ammonium rhomous of a religion of the responsion. Transport of ammonium relord to the religion of a religion in the support of the responsion. The responsion of the religion of the reli | Dark-purplish red deliquescent crystals. Soluble in water. Mixtures with combustible material may ignite spontaneously and may even explode. In the presence of moisture, corrosive to most metals. Causes burns to skin, eyes and mucous membranes. | Hygroscopic solid. Mixture of neodymium nitrate and praseodymium nitrate. Mixtures with combustible material are readily ignited and may burn flercely. Harmful if swallowed. | Violet deliquescent crystals. Soluble in water, Metting point: 47°C. Mixtures with combustible material are readily ignited and may burn fleretels, Solutions in water are slightly corrosive to most metals. Harmful if swallowed. | White granules. Soluble in water. Mixtures with combustible material are sensitive to friction and are liable to ignite. NITROGUANIDINE is a different substance. | White crystals. Soluble in water. Mixtures with combustible material are readily ignited and may burn flercely. Toxic if swallowed, by skin contact or by dust inhalation. | White crystals or powders. Soluble in water, Reacts of stooring lywith cauld Reacts first eight of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

Page 54 1474 1476 MSC 90/28/Add.3 ANNEX 4 1471 1475 1477 1479 1481 N 9 (9 18) 1481 Solids, Rear vigorously with subhurt and Reart firreely with cyanides when heated or by firriton. May form explosive mixtures with combustible marketial, providered meals or ammonium compounds. These mixtures are sensitive to friction and are liable to ignite. When involved in a fire, may cause an explosion. White deliquaxen crystals or crystalling proder. Soluble in water, Reads vigorously with sulphur acid. Reads if recely with opinides when heated or by finction. May form explosive mixtures with combustile material, or by finction. May form explosive mixtures with combustile material, or by finction. May or ammonium compounds. These mixtures are sensitive to fiction and are liable to gintle. When involved in a fire, may cause an White powder. Soluble in water. Solution in water is an alkaline corrosive liquid. Particularly if wetted with small quantities of water, a mixture with combustiber material may ignite following impact or friction. When in worden in a fire, or in contact with water of acids, decomposes, evolving White powder. Particularly if wetted with small quantities of water, a mixture with combustible material may ignite following impact or friction. When involved in a fire, or in contact with water or acids, decomposes, evolving oxygen. Harmful if swallowed. White deliquescent crystals, soluble in water. Mixtures with combustible material are readily ignited and may burn fiercely. Harmful if swallowed. Solids. Solid mixtures with combustible material are readily ignited and may burn fiercely. Harmful if swallowed. White crystals or powder. Reacts vigorously with sulphuric acid. Reacts fiercely with cyanides when heated or by friction. May form explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are sensitive to friction and are liable to ignite. When involved in a fire, may cause an explosion. Properties and Observations (12) See entry above See entry above See entry above emergency, and the consequent risk to the stability of the ship through flooding of the cargo spaces, shall be considered before loading. "Separated from ammontum compounds, acles, cyanides, hydrogen peroxide and Category A. Keep as dry as reasonably practicable. "Separated from" permanganates, acids and class 4.1. Category A. Keep as dry as reasonably practicable. "Separated from" permanganates, acids and class 4.1. Category A. When transported in BK3 bulk container, see 7.6.2.12 and 7.7.3.9. Category D. | MSC 90/28/Add.3<br>ANNEX 4<br>Page 55 | Properties and Observations | (17)                 |                | Solids. React vigorously with sulphuric acid. React fiercely with cyanides matter heated or by the reaction may be exposed measured or but an exposed measured. These with combustible metal charged realistics of ammonium explosured. These wittures are sensitive to friction and are liable to ignite. When involved in a fire, may exertise to friction and are liable to ignite. When involved in a fire, may be permangante and mixtures of a permangante with an ammonium particular. | See entry above.                                                               | Particularly if wetted with small quantities of water, a mixture with combustible material may ignite following impact or friction. When involved in a fire, or in contact with water or acids, decomposes, evolving oxygen. | See entry above.                                                                                                 | White crystals or powder. Soluble in water. Reacts vigorously with building of building of solution call General with commissible materials, powdered metals or amnotume with combustible materials, powdered metals or amnotume compounds. These mixtures are sersitive to friction and set liable to ignite.  When involved in a fire, may cause an explosion. | their crystals or produced. Soluble water, Reader of grounds which sulphuric acid React, flereds with cryaniles wheth heater of the soluble with combination and are mental, powdered metals or ammonium compounds. These must were are ensitive to friction and are alted to gitter. The soluble combination and are ensitive to friction and when involved in a fire, may cause an explosion. | White crystals or powder, Soluble in water. Mixtures with combustible material are readily ignited and may burn flercely. Harmful if swallowed. | Deliquescent solid. Soluble in water, May cause fire in contact with organic materia is to that swood, coutnon or straw. Maxtures with ammonium compounds or cyanides may explode. Harmful if swallowed. May be shipped in the form of fused solid block or lumps. | White or slightly yellowish deliquescent crystals or sticks. Soluble in water. Mixtures with combustible material are readily ignited and may burn freecely. Mixtures with ammonium compounds or cyanides may explode. Harmful if swallowed. | their cristle or produced, coulde in water, React vigorously with supplied and a supplied could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be could be cou | the control project services or prodes, college in water Rests reproductly with subputic acid and hydrogen perodics. Reacts floricely with controlled we with subputic acid and hydrogen perodics. Reacts floricely with controlled we material, produced maked by Michos May forme societies mixture controlled material, produced metals or ammonium compounds. These mixtures are substitute of first on and are liable to ignite. When involved in a fire, may cause an explosion. | Yellow powder. Particularly if wetted with small quantities of water, a mixture with combustible material may ignite, following impact or friction. When involved in a fire, or in contact with water or acids, decomposes, evolving oxygen. Highly iritating to Skin, eyes and mucous membranes. | White crystals or powder, Soluble in water. Mixtures with combustible material are sensitive for friction and ear lable to ignite. Reacts fercely with cyanides when heated or by friction. May form explosive mixture with powdered metals or ammonium compounds. | Colouriess crystals. Soluble in water. Mixtures with combustible material are readily ignited and may bun flercely. Hamful if swallowed. Irritating to city and mirrors manufactures manufactures. |

Mixtures with combustible material are readily ignited and may burn flercely. Harmful if swallowed. Mixture prepared as a fertilizer. Colourless crystals or powder. Soluble in water. Mixtures with combustible material are sensitive to friction and are liable to ignite. Reacts fercely the yapides when heated or by friction. May form explosive mixture with powdered metals or ammonlum compounds. Colourless deliquescent soild. Soluble in water. Mixtures with combustible material are readily ignited and may burn flercely. Mixtures with material are readily ignited and may burn flercely. Mixtures with ammonium compounds or cyanides may explode. Decomposes if heated giving off toxic infrous times and gases supporting combustion. Harmful Colourless crystals or powder, soluble in water. Reacts vigorously with sulphur acid, Reacts flexible with cyalades when heated or by friction. After me explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are sensitive to friction and sulphuric acid. Reacts fercely with cyanides when heated or by friction. May form explosive mixtures with combust ble material, prowdered metals or ammonium compounds. These mixtures are sensitive to friction and are liable to gintle. When involved in a fire, may cause an explosion. Colourless deliquescent soild. Soluble in water. Reacts vigorously with sulphurc acid. Rearts fercely with cyanides when hearted or by friction. May form explosive mixtures with combustible material, powdered metals or ammonlum compounds. These mixtures are sensitive to friction and Colourless deliquescent solid. Soluble in water. Mixtures with combustible material are readily ignited and may burn fiercely. Harmful if swallowed. This substance in the impure form is known as Chile Saltpetre. Colourless deliquaever solds coluble in water, Resert sugerously with pulpuint acid, Reacts ferrebly with opandes when heated or by firstly with May from explosive mixtures with combustible material, powdered metals a mamonium consultad. The successive of the colour and are ilable to grifter. When involved in a first, may cause an explosition. Colourlies crystals or powder, soluble in water. Reacts upprotestly with subhuric acid. Reacts farctely with cyanides when heated or by friction with May form explosive mixtures with combustible material, prowdered metals or almononium compounds. These mixtures are sensitive to fitcion and are liable to ignite. When involved in a fire, may cause an explosion. Colourless powder. Particularly if wetted with small quantities of water, a mixture with combustible materials may ignite following impact or friction. When involved in a fie, or in contact with water or acids, decomposes, evolving oxygen. May form explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are sensitive to friction and Red crystals or powder. Soluble in water. Reacts vigorously with sulphuric acid and hydrogen peroxide. Reacts fiercely with cyanides when heated or by friction. May form explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are sensitive to friction and are liable to ignite. When involved in a fire, may cause an Colourless solid. Soluble in water. Mixtures with combustible material are readily ignited and may burn fiercely. Harmful if swallowed. Colourless deliquescent crystals. Soluble in water. Reacts vigorously with sulphuric acid. Reacts ferrely with cyanides when heated or by friction. May form explosive mixtures with combustible material, powdered metals Pale yellow coarse powder or granules, Particularly if wetted with small pale yellow coarse powder or granules Particularly if wetted with combustible material may ignite, following impact or fiction. When involved in a fire, or in contact with related and accomposes, working oxygen. Highly initiating to skin, eyes and mucous membranes. White deliquescent crystals. Soluble in water. Reacts vigorously with sulphuric acid. Reacts flercely with cyanides when heated or by friction. or ammonium compounds. These mixtures are sensitive to friction a are liable to ignite. When involved in a fire, may cause an explosion. or ammonium compounds. These mixtures are sensitive to friction a are liable to ignite. When involved in a fire, may cause an explosion. are liable to ignite. When involved in a fire, may cause an explosion. Properties and Observations (12) Category A. |            | Properties and Observations | (11)       |   | Colourless liquid with a pungent odour. Freezing point: 12.5°C, insoluble in water, Mixtures with rombustible material are readily ignited, burn fleretely and may also explode by friction or shock. Highly toxic if swallowed, by skin contact or by inhalation. | White crystals or powder. Soluble in water. Mixtures with combustible material are sensitive to friction and are liable to ignite. Irritating to skin, eyes and mucous membranes. | Transport is prohibited.  | Colouries or yellowish crystals. Soluble in water. Reacts vigorously with beginning and public rad of Kentosci Bretely with cryatides when thesed of by Hirdron. May form explosive mixtures with combustible material, powdered metals a memorism consouried. These instructives are sensitive to friction and are illale to ginter, When involved in a fire, may cause an explosion. | Colourless solid. Soluble in water, Melting point: 36°C. Mixtures with combustible material are readily ignited and may burn flercely. Solutions in water are slightly corrosive. Harmful if swallowed. | which chemon to black crystals or product scaleble the water. Reacts the country of control which support of and hydrogen perovide. Reacts fatterly with sulphuric acid and hydrogen perovide. Reacts fatterly with control with the conhots the material, provide ede metals of my fatter oppositions for the conhots the material, provide ede metals of mornious for monoius. These at fatter are service to friction and are liable to liquite. When involved in a first, may cause an explosion. | White powder. Particularly if wetted with small quantities of water, a mixture with combustible material may ignite following impact of friction. When involved in a fire, or in contact with water or acids, decomposes, evolving oxygen. | Desensitized explosive. Highly explosive in the dry state or if insufficiently wetted. May react violently in contact with heavy metals or their salts. | Colouries to amber liquid evolving toxic vapour. Miscible with water. Assable in contact with adds and alkals, evolving hydrogen cyanide, a highly toxic and flammable gas. Highly toxic and allowed, by skin contact of by inhaldron. | A wide range of toxic solids, generally of vegetable origin. Toxic if swallowed, by skin contact or by inhalation. | See енту above.                                                    | See епту аbove                                                     | . Colourless liquid evolving toxic vapour which is irritating and causes tears. Flashpoint: 46°C c.c. Toxic if swallowed, by skin contact or by inhalation. | White powder or crystals. Soluble in water. Reacts with alkalis, evolving ammonia gas. Toxic if swallowed, by skin contact or by dust inhalation. | Colourles s, oily, volatile liquid. Reacts with acids. Toxic if swallowed, by skin contact or by inhalation. |

Toxic if swallowed, by skin contact or by dust inhalation. A wide variety of toxic liquids. In contact with acids, arsenic sulphide evolves hydrogen sulphide, a toxic and flammable gas. Toxic if swallowed, by skin contact or by inhalation. A wide variety of toxic solids. In contact with acids, arsenic sulphide evolves hydrogen sulphide, a toxic and flammable gas. Toxic if swallowed, by skin contact or by dust inhalation. contact White crystals with a relatively high melting point. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation. skin White powder or crystals. Toxic if swallowed, by skin contact or by dust inhalation. White, deliques cent crystals which readily become liquid. Melting point: approximately 35°C. Miscible with water, in contact with metals, may evolve arsine, an extremely toxic gas. Highly toxic if swallowed, by skin contact or by inhalation. Toxic if Toxic if swallowed, by skin contact or by White, deliquescent crystals. Melting point: approximately 33°C. Decomposed by water, evolving hydrogen bromide, an irritating and corrosive gas, apparent as white fumes. Toxic if swallowed, by skin White, deliques cent powder. Soluble in water. Toxic if swallowed, by contact or by dust inhalation. . Decomposes to aniline in contact or by inhalation. metal. Silvery, brittle, crystalline solid with the appearance of a r swallowed, by skin contact or by dust inhalation. Properties and Observations (12) White, crystalline solid. Soluble in water. with alkalis. Toxic if swallowed, by skin or A wide range of toxic solids. inhalation. contact or by dust inhalation. Category B. Clear of living quarters. See entry above. "Away from" class 3 and heavy metals and their salts. | Desensitized explosive. White crystals or powder, Explosive and sensitive for friction in the day state. Toxic if swallowed, by skin contact or by dust inhalation. May form extremely sensitive compounds with heavy metals or their sails.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 1571                         |

|                | Properties and Observations (177) |           | Colourless liquids. May explode if involved in a fire. Toxic if swallowed, by skin contact or by inhalation. | Yellow crystals. Melting point: approximately 30°C to 80°C. Toxic if swallowed, by skin contact or by inhalation. | Dry solid or paste. Toxic if swallowed, by skin contact or by dust inhalation. | Colouriess, oily liquid . Highly toxic if swallowed, by skin contact or by inhalation. | Extremely volatile ilquid evolving highly toxic vapours. Highly toxic by skin contact or by inhalation. Causes burns to skin and eyes; vapour irritating to mucous membranes. | Extremely volatile ilquid evolving highly toxic vapours. Highly toxic by skin contact or by inhalation. Causes burns to skin and eyes, vapour irritating to mucous membranes. | Category C. Clear of Ilving quarters. A wide range of liquid mixtures. May evolve highly toxic vapour. Toxic if swallowed, by Alin contact or by inhalation. | See entry above.                      | See entry above.                                       | Green powder, Insoluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | Yellowish-green powder, Insoluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | Green powder. Sightly soluble in water. Reacts with acids or acid fumes, evolving hydrogen cyanide, a highly toxic and flammable gas. Toxic if swallowed, by skin contact or by dust inhalation. | Solids. May be soluble in water. On contact with water, may form a weak hydrogen copaide solution. Reach with acids or add furnes, evolutions, because hydrogen copaides, a highly toxic and flammable gas. Toxic if swallowed, by skin contact or by dust inhalation. The provisions of this Code shall not apply to complex ferricyanides and ferrocopaides. | See entry above.                        | See entry above.                                     |

Malting point: approximately-177C. Toxic if swallowed, by skin contact or by inhalation. | Colouries, volatile liquid with heavy vapours. Boiling point: 40°C. When involved in a fire, evolves extremely toxic fumes (phosgene). Toxic if swallowed, by skin contact or by inhalation. | Colouriess, oily liquid. Readily hydrolysed by moisture to sulphuric acid, which is a corrosive liquid. Toxic if swallowed, by skin contact or by inhalation. | Colourles s, volatile liquid evolving toxic vapours. In the presence of moisture, corresive to most metals. Highly toxic if swallowed, by skin moisture, to by inhalation. Causes burns to skin, eyes and mucous membranes. | Yellow crystals in pure form. Insoluble in water. May explode if involved in a fire. Toxic if swallowed, by skin contact or by inhalation. | Yellow solutions. May explode if involved in a fire. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                      | Yellow crystals or crystalitzed mass. Slightly soluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | Substance when pure consists of yellow crystals. Slightly soluble in water. May form extremely sensitive compounds with heavy metals or their salts. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                                         | Molten liquid. This entry covers the $2.3$ -, $2.4$ -, $2.5$ -, $2.6$ -, $3.4$ -and $3.5$ - isomers having melting points between $5.2$ C and $9.3$ C. Toxic if swallowed, by skin contact or by inhalation. | A wide range of toxic solids. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                                      | See entry above.                                       |
|                                       | Stowage and Segregation (16)      | 7.107.7 | Category D. Clear of living quarters.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Category A. | MSC 90/28/Add.3 ANNEX 4 ANNEX 4 Pige 62 | Properties and Observations | (17) |            | A wide range of toxic liquids. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                                                            | See енту аbove.                                                         | Category D. Clear of living quarters. Colouries, flammable ilquid evolving irritating vapour ("Text Gas").<br>Flashpoint: SS C.c., Foot of Swallowed, by skin contact or by Inhalation. | Volatile, colourless, hygroscopic flammable liquid with an ammonia-like odour. Flashpoint: 34°C c.c. Miscible with water. Causes burns to skin, eyes and mucous membranes. Reacts violently with acids. | Colouriess, volatile liquid. Highly toxic if svallowed, by skin contact or by inhalation. | Green crystals or powder. Insoluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | Brown or yellow powder. Insoluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | Green powder, Insoluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | Yellow liquid. Miscible with water. Toxic if swallowed, by skin contact or by inhalation. | Category D. Clear of living quarters. Toxic if swallowed, by skin contact or by inhalation. | Colouribss liquid evolving externely toxic vapour with a bitter almond by coord, installed by shir contract or by minimation. Transport of HYBOCYAMICAGID, AQBGOS SQLINDON with inhaltion. Transport of HYBOCYAMICAGID, AQBGOS SQLINDON with compare than 20% HyBOCYAMICAGID, SQLINDON with a compare than 20% HyBOCS squingle or paniel es prohibited. SQLINDON with more than 20% HyBOGS no quindle is prohibited. | Very volatile, colourless liquid, evolving extremely toxic flammable vapours, absorbed in a porous inert material. Miscible with water. Highly toxic if swallowed, by skin contact or by inhalation. | White crystals, or brown or grey lumps. Soluble in water. Toxic if swallowed, by skin contact or by inhalation. | White crystals or powder. Insolubbe in water. Toxic if swallowed, by skin contact or by dust inhalation. | White powder. Insoluble in water. Toxic if swallowed, by skin contact or by $$ 1618 dust inhalation. |

|            | Properties and Observations (17) |            | White powder, Slightly soluble in water. Reacts with acids or acid fumes, evolving hydrogen cyanide, a highly toxic and flammable gas. Toxic if swallowed, by skin contact or by dust inhalation. | Mxuze of arsenic trioxide, lime and ferric oxide, used as an insecticide.<br>Insoluble in water. Toxic if swallowed, by skin contact or by dust<br>inhalation. | White crystals or powder, Insoluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | Vellow crystals or powder. Insoluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | White crystals or powder. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | White, deliquescent crystals or powder, Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | Colourless crystals. Soluble in water. Reacts with acids, evolving hydrogen cyanide, a highly roxic and flammable gas. Highly roxic if swallowed, by skin contact or by dust inhalation. | Grystals or powder. Toxic if swallowed, by skin contact or by dust inhalation. | White crystals or powder. Toxic if swallowed, by skin contact or by dust inhalation. | White crystals or powder. Insoluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | White crystals. Toxic if swallowed, by skin contact or by dust inhalation. | White crystals or powder. Toxic if swallowed, by skin contact or by dust inhalation. | White crystals or powder. Soluble in water. Reacts with acids or acid furnes, evolving hydrogen cyanide, a highly toxic and flammable gas. Toxic if swallowed, by skin contact or by dust inhalation. | Solid. Soluble in water. Toxic if svallowed, by skin contact or by dust inhalation. |     |

Toxic if swallowed, by slin contact or by distribution, and the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the st | Yellow, deliquescent crystals or powder. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | White powder, insoluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | White crystals or powder. Decomposes in water, forming sulphuric acid.<br>Toxic if swallowed, by skin contact or by dust inhalation. | White powder, insoluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | . Solutions of methyl bromide gas, evolving toxic vapour. Methyl bromide has a boiling point of approximately 4°C. Highly toxic if swallowed, by skin contact or by inhalation. | Colouries, volatile liquid. Flashpoint. 2°C.c.: Explosive limits. 3% to 16%. Miscible with water. When involved in a fire, evolves toxic cyanide fumes. Harmful if swallowed, by skin contact or by inhalation. | Volatile liquids evolving toxic vapour. Mixture of tetraethylead or retramethyllead with ethylene dibromide and ethylene dichloride. Insoluble in water. Highly toxic if swallowed, by skin contact or by inhalation. | White crystals. Toxic if swallowed, by skin contact or by inhalation. | White crystals or powder. Toxic if swallowed, by skin contact or by dust inhalation. | Crystals or powder. Toxic if swallowed, by skin contact or by dust inhalation. | Green crystals or powder. Insoluble in water. Reacts with acids or acid fumes, evolving hydrogen cyanide, a highly toxic and flammable gas. Toxic if swallowed, by skin contact or by dust inhalation. |
|                                       | Stowage and Segregation (16)            | 7.1 to 7.7     | Category A.                                                                                           | Category A.                                                                                     | Category A.                                                                                   | Category A. "Separated from" acids and class 3.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Category A.                                                                                                           | Category A.                                                                                  | Category A.                                                                                                                          | Category A.                                                                                  | Category D. | Page 65 | Properties and Coservations (17) |                | Thick colourless oil, turning brown on exposure to air. Miscible with water. Toxic if swallowed, by skin contact or by inhalation. | A wide variety of toxic solids. Toxic if swallowed, by skin contact or by dust inhalation. | See entry above.                                                             | See entry above.                                                             | Miscible with water. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                                | White crystals. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | Miscible with water. Toxic if swallowed, by skin comact or by inhalation. | See entry above.               | White crystals, Soluble in water, Toxic if swallowed, by skin contact or by dust inhalation. | Non-flammable, toxic and corrosive gas. Strong oxidizing agent. On contact with air, gives off brown fumes which are toxic by inhalation, with delayed effect similar to phosgene. Heavier than air (1.04). Highly irritating to skin, eyes and mucous membranes. | Yellow crystals. Toxic if swallowed, by skin contact or by dust inhalation. ortho-NITROANILINES may be carried in the molten state. | Category A. Clear of Ilving quarters. Oily liquid, evolving toxic vapour. Melting point: approximately 6°C. Toxic<br>If swallowed, by skin contact or by Inhalation. | Yellow crystak. Some isomers may have a metting point as low as 44°C.  Toxic If swallowed, by skin contact or by dust inhalation. May be carried in the motien state. | Yellow liquids. Melting points: ortho-NTROTOLUBNE: -4°C, meta-<br>NITROTOLUBNE: 15°C. Toxic if swallowed, by skin contact or by inhalation. | Yellow liquids. Melting points: 2-NITRO-3-XYLENE: 14°C to 16°C, 3-NITRO-2-XYLENE: 2°C. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation. |

| MSC 90/28/Add 3<br>ANNEX 4<br>Page 66 | Properties and Observations (177) |         | . Colourless liquid. Toxic if swallowed, by skin contact or by inhalation. | Y Vellow, oily, volatile ilquid evolving irritating vapour (Tear Gas.). Slowly vectorposes in composes in control with water, producing bylonique, deads with iron or steel, evolving arbon tetrachloride. Corrosiver to most metals. Highly toxic if swallowed, by skin contact or by inhaliation. | Colourless or white crystals or crystalisted mass. Meting point: 43°C (pure product). Soluble in water. Toxic if svallowed, by skin contact or by vapour inhalation. Rapidly absorbed through the skin. | Pale yellow, oily liquid with an irritating unpleasant odour. Highly toxic if swallowed, by skin contact or by inhalation. | White crystals or powder. Toxic if swallowed, by skin contact or by dust inhalation. May be carried in the molten state. | Toxic if swallowed, by skin contact or by dust inhalation. | Colourless crystals or white powder. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | White powder, Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | White crystals or powder, Soluble in water. Reacts with acids or acid fumes, evolving hydrogen cyonide, a highly toxic and flammable gas. Toxic if svallowed, by skin contact or by dust inhalation. | White, deliques cent crystals or lumps. Soluble in water. Reacts with acids or acid furnes, evolving hydrogen cyanide, a highly toxic and flammable gas. Highly toxic if swallowed, by skin contact or by dust inhalation. | Yellow powder. Insoluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | White powder, insoluble in water, Reacts with acids or acid furnes, evolving hydrogen cyanide, a highly toxic and flammable gas. Toxic if swallowed, by skin contact or by dust inhalation. | Colouriess crystals. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | Colouriess liquid. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                       |

|            | Properties and Observations (17)  |          | Colourless crystals. May react vigorously with acids to form hydrazoic acid, which is an explosive. May form extremely sensitive compounds with heavy metals or their salts. May explode if involved in a fire. Toxic if swallowed, by Skin contact or by dust inhalation. | White, deliquescent solid with a foul odour. Reacts with acids, evolving dimethylarsine, an extremely roxic gas. Soluble in water. Toxic if swallowed, by skin contact or by dust imbalation. | White, deliquescent crystals or lumps. Soluble in water. Reacts with acids or acid fures, evolving hydrogen cyanide, a highly toxic and flammable gas. Highly toxic if swallowed, by skin contact or by dust inhalation. | White crystals or powder. React with acids, evolving hydrogen fluoride, a toxic, irritating and corrosive gas, apparent as white fumes. Toxic if swallowed, by skin contact or by inhalation. | White powder, Soluble in water, Toxic if swallowed, by skin contact or by dust inhalation. | White crystals or powder. Strychnine is slightly soluble; the salts are soluble in water. Highly toxic if swallowed, by skin contact or by dust inhalation. | Tear gas substance" is a generic term for substances which, in minute quantities dispersed in air, cause extreme eye irritation and profuse tears. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                                       | Volatile liquids evolving irritating vapour ("Tear Gas"), Melting points:<br>ortho-BROMOBEAZYL CYANDE T.C. Highly toxic if swallowed, by skin<br>contact or by inhalation. | Flammable, cornosive, colouniess liquid, evolving irritating vapour ("Tear<br>Gas"), Miscible with water, Flashpoint, 25°C.c.c. Highly toxic if swallowed,<br>by skin contact of by Inhalation. | White crystals evolving intitating vapour (Tear Cas?). Melting point may be as low as 20°C. Toxic if swallowed, by skin contact or by inhalation. | Category D. Clear of living quarters. Volatile, yellow crystals evolving irritating vapour ("Tear Gas"). Highly toxic contact or by Inhalation. | When pure, colourless liquid. The commercial product may be a dark brown liquid. Volatile liquid evolving an irritating vapour (Trair Gas"). Highly toxic if swallowed, by skin contact or by inhalation. | Devices containing tear—producing substances which, in minute quantities dispersed in air, cause extreme eye irritation and profuse tears. | Colouries, liquid, evolving irritating vapour (Tear Gas "). Toxic if swallowed, by skin contact or by inhalation. | Category A. Clear of living quarters. Colourless liquid with a chloroform-like odour. Toxic if swallowed, by skin contact or by inhalation. |

Colouries filed Rests vidently whit water, evolving pridicage homde, an irritating and corrosive gas apparent as white furnes. In the presence of most true, highly corrosive to most metals. Vapour irritates mucous membranes. fumes (phosgene). Toxic if Toxic if swallowed, by skin contact or Colourless liquid. Flashpoint: STC.cc.. Bolling point: 51°C. Reacts violently with water, evolving hydrogen chloride, an irritating and cornosive gas apparent as white furnes. In the presence of moisture, highly corrosive to most metals, Causes burns to skin, eyes and mucous membranes. Colouriess, flammable liquid, extremely irritating odour, causes tears. Flashopinit. 3T C.C. When intolood and fine, evolves octors gases, in the presence of moisture, corrosive to most metals. Highly toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous. Corrosive to aluminium, zinc and tin. Reacts violently with acids. Reacts with ammonium salts, evolving ammonia gas. Causes burns to skin, eyes and mucous membranes. metals. Colourles s, flammable liquid with an irritating odour. Flashpoint: 54°C c.c. Immiscible with water, in the presence of moisture, corrosive to most metals. Vapour irritates mucous membranes. contact or by dust Colourless liquids. Toxic if swallowed, by skin contact or by inhalation. White crystals or powder. Insoluble in water. Reacts with acids or acid fumes, evolving hydrogen cyanide, a highly toxic and flammable gas. Highly toxic if swallowed, by skin contact or by dust inhalation. Grey crystals or powder. Reacts with acids or decomposes slowly in contact with water or damp air, evolving phosphine, a spontaneously flammable and highly toxic gas. Reacts violently with oxidizing ģ Colourless liquid. In the presence of moisture, corrosive to most. Toxic if swallowed, by skin contact or by inhalation. rellow liquid. Insoluble in water. Mildly corrosive to most metals. Toxic if swallowed, by skin . Toxic if swallowed, by skin Toxic if swallowed, by skin contact or by inhalation Properties and Observations Colourless liquid with a chloroform-like odour. When involved in a fire, evolves extremely toxic f swallowed, by skin contact or by inhalation. (12) Crystalline solid. Insoluble in water. by dust inhalation. White crystals or powder. inhalation. See entry above. White crystals of inhalation. Category A. "Separated from" acids. "Away from" ammonium salts. Category D. Clear of living quarters. Category A. Clear of living quarters. Category E. If under deck, in a mechanically ventilated space. Clear of living quarters. "Separated from" acids. Category A. "Separated from" acids. "Away from" ammonium salts. Category D. Clear of living quarters. Segregation as for class 3 but "Away from" class 4.1. Category A. "Separated from" acids. Category B. Clear of living quarters. Stowage and Segregation Category A. Clear of living 7.1 to 7.7 (16) Category A. Category A. Category A. Category A. Category A. Category A. | MSC 90.28/Add.3<br>ANNEX -<br>Page 69 | Properties and Observations | (1)                   | Yellow liquid with an irritating odour. Flashpoint: 5°C c.c. inmiscible with water. In the presence of moisture, corrosive to most metals. Causes burns to skin, eyes and mucous membranes. | Colouries, farmable liquid with a purgent odour, ving phydrogen professional colouries, and which colouries in the colouries and conduction and with water with water with the colouries and conduction and with the colouries with the colouries of the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to the colouries to |                                      |                                      | <ul> <li>White deliquescent crystals. Decomposed by heat or acids, evolving<br/>hydrogen flucoride, account, casternelly furtiating and consisting as<br/>apparent as white fumes. In the presence of moisture, highly corrosive to<br/>glass, other siliceous materials and most metals. Causes burns to skin and<br/>muckous membranes.</li> </ul> |                                       | Crystalline powder, Melting point, 22°C. Reacts violently with water, evolving pidrogen chloride, an irritating and corrosive gas apparent as white fumes, in the presence of missture, highly corrosive to most metals. Vapour irritates mucous membranes. | <ul> <li>Yellow, oily liquid with an offensive odour. May solidify by absorption of<br/>moisture. Reacts vollently with water, evoluting phylogen chloride, an<br/>irritating and corresive gas apparent as white times. In the presence of<br/>moisture, highly corrosive to most metals. Causes burns to skin, eyes and<br/>mucous membranes.</li> </ul> |                                       | . See entry above.                    | Colouriess liquid with a pungent codour. When anhydrous, mildly corrosi ver<br>old sigs, other slidous naterials and nost metals. Assetts violently with<br>water, evolving hydrogen fluoride, an irritating gas, lighly corrosive to<br>see a and other light see and most metals. Powerful outside,<br>may cause fire in contact with readily flammable or gaint; substances.<br>The fir simplewed, by skill contact or by inhalation. Causes burns to skin<br>and mucous membranes. | . Reacts slowly with water, evolving hydrogen chloride, an irritating and corrosive gas. In the presence of moisture, corrosive to most metals. | Colourless liquid, very irritating odour, causes tears. Reacts violently with water, evolving hydrogen chloride, an irritating and corrostve gas apparent as white furnes, in the presence of involsture, highly corrostve to most metals. Appour irritates menochanes. |
