| ,                                  | Properties and Observations (17)      |                | Yellow liquid. Decomposition occurs on exposure to moist air, forming the full of full of the corresponding a spherent standard and and Whydeper follorids, a corresponding a spherent as a white furms. Reads with, or dissolver, many organic compounds. In the presence of most outside, corresponding to most metals. Causes burns to skin, eyes and muccous membranes. | Category C. Clear of living quarters. Reddish-brown liquid. Decomposes under the influence of light, evolving Choling, a lightly book cand firstlying sax, Reazz violently with water, evolving thy drogen chloride a, corrostve gas apparent as white times. In the presence of insustrue, contox to most metals. Liquid and vapours cause burns to skin, eyes and mucous membranes. | Yellow crystals. Melting point: 32°C or above. Sightly soluble in water.<br>Toxic if swallowed, by skin contact or by inhalation. | Molten liquid, Meting point: 44°C ignites spontaneously in air. Toxic if swallowed, by skin contact or by inhalation. Shipped molten above its metling point. | Meting point: 119°C. Motien sulphur may contain hydrogen sulphide<br>with the highly point in affect, well ritted in a fire, well ritted in a fire, well ritted and sufficienting assist from sexplosuse and the cereby sensitive. Well ritted and sufficienting assistances, Shipped molten above is melting point. | Non-flammable, non-toxic, colourless, odourless gas. Strong oxidizing agent; reacts violently with many substances, e.g. grease, oil, etc. Much heavier than air (2.4). May cause slight eye irritation. | Liquefied, flammable, colourless gas with an odour similar to acetylene.<br>Heavier than air (1.9).<br>Boiling point: 8°C. Irritating to skin, eyes and mucous membranes. | Liquefied, flammable, colourless gas. Explosive limits: 5% to 10%. Heavier than air (1.7), Boiling point: -37°C. | Flammable, colourless gas. Heavier than air (1,2). | Transport is prohibited. | Colouriess liquid. Flashpoint: below—18°C c.c.: Explosive limits: 2.5% to 12%. Boiling point: 23°C. Immiscible with water. Harmful if swallowed or by inhalation. Irritating to skin, eyes and mucous membranes. | Colourless liquid. Flashpoint: –29°C c.c. Explosive limits: 1.2% to 7%. Immiscible with water. Irritating to skin, eyes and mucous membranes. Narcotic in high concentrations. | Colourles Iliquids. 13-#AROMONE Takpoint -37C.c. 14-#EXADINE Takpoint -27C.c. 14-#EXADINE Takpoint -27C.c. 24-#EXADINE Takpoint -27C.c. 24-#EXADINE Takpoint -77C.c. 24-#EXADINE Takpoint -77C.c. minscible with water. Harmful by inhalation. Inflating to skin, eyes and mucoto membranes. | Colourless, volatile liquid with a disagreeable odour. Flashpoint: below – $18^{\circ}\mathrm{C}$ c.c. Immiscible with water. Irritating to skin, eyes and mucous membranes. | Colouriess, volatile liquid with a disagreeable odour.<br>Flashpoint: below - 18°C.c. Immiscible with water. Irritating to skin,<br>eyes and mucous membranes. |
|                                    | Stowage and Segregation (16)          | 7.1 to 7.7     | Category C. Clear of living quarters.                                                                                                                                                                                                                                                                                                                                       | Category C. | Properties and Observations  | (1)                    | Colourles, furning liquid (density 3.75). Powerful oxidant: may cause fire<br>rornatt with oxidant material such as wood, colon or straw Reast far<br>violently with water, evolving hydrogen fluoride, at look, extremely<br>violently with water, evolving hydrogen fluoride, at look, extremely<br>violently with water, evolving hydrogen fluoride, at look, extremely<br>violently with water, evolving hydrogen fluoride, at look, extended frimes<br>evolves highly toxic furnes of lodine, and other compounds. Highly<br>evolves highly toxic furnes of lodine, fluorine and their compounds. Highly<br>inhalition, Causes burns to Skin, eyes and mixtoous membranes. | Colouriess, combustible liquid with a pungent odour. Reacts with water, forming propionic acid. Corrosive to skin, eyes and mucous membranes. | Colourless liquid. Flashpoint: 57°C o.c. Immiscible with water. | Aqueous solution. Miscible with water. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                                 | Liquid with a penetrating odour. Flashpoint: 23°C c.c. or above. Reacts with water, evolving hydrogen chloride, a corrosive gas apparent as white fumes. Corrosive to most metals. Causes burns to skin, eyes and mucous membranes. | White, lustrous crystals. Reacts with water, evolving hydrogen chloride, a corrosive gas apparent as white fumes, in the presence of moisture, corrosive to most metals. Irritating to mucous membranes. | Colourless to yellowish liquid with a camphor-like odour. Toxic if swallowed, by skin contact or by inhalation. | Colour less crystals or powder with an ammonia-like odour. Readily soluble in water. Decomposes in contact with acids, evolving hydrogen flooride, a corrosive gas. Toxic if swallowed, by skin contact or by dust imitation. | White, rhombic crystals, Soluble in water. When involved in a fire, evolves extremely intriating and corrosive furnes. In the presence of moisture, corrosive to most metals. Causes burns to skin, eyes and mucous membranes. | Red-brown crystals. Soluble in water. | Black or green-black crystals, Hygroscopic. Reacts violently with water, evolving hydrogen choride, a corrosive gas apparent as white funes. Harmful is swallowed. Dust and vapour irritate skin, eyes and mucous membranes. | Colourless crystals. Soluble in water. When involved in a fire, evolves extremely infrating and corrosive fumes. In the presence of moisture, corrosive to most metals. Infrating to skin, eyes and mucous membranes. | Colouries,, aqueous solution with a specific odour. Causes burns to skin, eyes and mucous membranes. |  |

|          | Properties and Observations (17)                |            | Clear liquid, colourless, Bolling point: 150°C. Reacts violently with water,<br>which high pide goals promide, an intring and consolive gas apparent as<br>white furnes, in the presence of moisture, in playly consolive to most metals,<br>executed to the presence of moisture, and public processes to<br>severe burne to skin, eyes and mucous membranes. Vapour causes teaty<br>severe burne to skin, eyes and mucous membranes. Vapour causes teaty. | Colouriess iquid with a characteristic odour. Flashpoint: 51/C c.c.<br>Explosive limits: 0.5% to 2.8%. Immiscible with water. | Colouriess liquid or crystals (melting point 9°C) with a chloroform-like odour. Toxic if swallowed, by skin contact or by inhalation. Narcotic effect. | Colouriess crystals. Meting point: 48°C: Insoluble in water. Toxic if swallowed, by skin contact or by inhalation of dust and vapour. | Category B. Clear of living quarters. Flammable gas. Explosive limits: 8.5% to 1-4%. Much heavier than air (3.5). | Category A. Clear of living quarters. Colourless liquid. Toxic if swallowed, by skin comact or by inhalation. | Colouriess liquids, immiscible with water, 1, 5-CYCLOOCTADIENE flashpoint 38°C c.c. Irritating to skin, eyes and mucous membranes. | Colouriess flammable liquid with a pungent odour. Flashpoint: 44°C.c Intensicible with water, but hydrolyses slowly in contact with it. The presence of adds. bases or ammes can initiate explosive polymerization. Highly toxic if swallowed, by skin contact or by inhalation. | Category D. Clear of Ining quarters. Combustible liquid. Causes tears. Toxic if swallowed, by skin comact or by Inhalation. | Colouries liquid with an ethereal odour. Flashpoint: 30°C c.c. immiscible with water. | Colouriess, oily, aromatic liquid. Slowly decomposed by water. Toxic if swallowed, by skin contact or by dust inhalation. | Pale yellow, oily liquid. Flashpoint: 37°C o.c. Miscible with water. Harmful by inhalation. Causes burns to skin and eyes. Irritating to mucous membranes. | Colouriess ilquid with a pungent odour. Flashpoint: 29°C o.c. Immiscible with water. Harmful by inhalation. Irritating to skin, eyes and mucous membranes. | Colouriess liquid with a fruity odour. Flashpoint: 37°C c.c.<br>Explosive limits: 0,96% to 7.59%. Immiscible with water. | Colourles Ilquid with a pungent odour. Flashpoint: 55°C c.c.<br>Explosive limits: 2% to 9.2%. Miscible with water. Causes burns to skin and eyes. Irritating to skin, eyes and mucous membranes. |

Hamful by inhalation. Causes burns to skin and eyes. Irritating to mucous membranes. Black amorphous powder. Insoluble in water. Liable to ignite spontaneously in air. Forms explosive mixtures with oxidizing substances. Colourless, volatile liquid with an ether-like odour. Flashpoint  $-11^{\circ}\text{C}$  o.c. Immiscible with water. Colouries s, combustible liquid with an amine odour. Immiscible with water. When involved in a fire, evolves toxic gases. Toxic if swallowed, by skin contact or by inhalation. Liquefied, flammable, toxic and corrosive colourless gas with a pungent obdury attests with water, evolving hydrogen chloride, an irritating and corrosive gas. Heavet than air. Boiling point: 9°C. Highly irritating to skin, eyes and muctos membranes. odour. Miscible with water. and and possible kits of explosions should therefore be propelly stabilized. Cooling below melting point (15 C) followed by subsequent reheating can release uninhibited monomer that readily polymerizes. Demotoses when heated, evolving toxic gases. Causes burns to skin, eyes and micros membranes. Paleyellow coarse powder or granules, Particularity if wetted with small quantities of water, a mixture with combustible marent in may ignite, following impact or friction. When involved in at fire, or in confact with water or addis, deconnects, evolving oxygen. Highly irritating to skin, eyes and mucous membranes. Colourless, combustible liquid with a specific odour. Miscible with wate Polymerizes readily above its melting point (15°C), thereby generating Colourless liquid. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation. Grey powder. Liable to ignite spontaneously in air. Forms explosive mixtures with oxidizing substances. Colourless to pale amber liquid with a lemon odour. Flashpoint: 37°C c.c. Immiscible with water. Properties and Observations Harmful if (12) Yellow crystals. Insoluble in See entry above See entry above See entry above See entry above. Category C. Clear of living quarters. Category D. Clear of living quarters. Segregation as for class 2.1 but "Away from" class 4.3. Category E. Keep as dry as reasonably practicable. "Separated from" permanganates, acids and class 4.1. Clear of living quarters. Segregation as for class 5.1 but "Separated from" class 7. | Non-flammable, toxic and corrosive gas. Forms dense, white, corrosive are sense in most as it acts violently what, eved only plating illoride, at oxic, irritating and corrosive gas apparent as white lumes. Corrosive to glass and to nost metals. Powerful oxidizing agent which may cause where free with combastible metarals. Much hawarer than air (4.5). Highly irritating to skin, eyes and mucous nemeralizants.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 2548                                  |

Cetyosive limits: 23% to 93%, immissible with<br>water. When involved in a fire, may evolve highly toxic phospene gas.<br>Harmful by inhalation. Inritating to skin, eyes and mucous membranes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 2554                                  |
|                                                                                                                                 | L.4             | _            | 28                    | 0     | EO                   | P406         | PP31                      |                 |                  | 1                     | 1                                                   | F-B, S-J | Category E. "Away from" class 3 and heavy metals and their salts.                                | Desensitized explosive. Nitrocellulose may be granular or in flakes, blocks or fibrous form. When involved in a fire, evolves toxic furnes; in closed compartments, these furnes may form an explosive mixture with air. May form extremely sensitive compounds with heavy media or their salts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 2555                                  |

| MSC 90/28/Add.3<br>ANNEX 4<br>Page 116 | Properties and Observations (17) |           | See entry above.       | Colourless oily liquids. React with water, evolving heat. Clause burns to skin, eyes and muccoss membranes, Highly cornsive to metal. | Pale yellow olly liquid, Meting point: 20°C. Slightly soluble in water. Toxic if swallowed, by skin contact or by inhalation. | Colourless crystals. Silghtly soluble in water. Reacts vigorously with May Durburic acid. Reacts vigorously with Any Durburic acid. Reacts with combastible material, powdered metals, from colosine matures with combastible material, powdered metals are landered or compounds. These mixtures are sensitive to infortion and are lander longinte. The material control of pinter. | Colourless liquid. A mixture of isomers. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation. | Colourless liquid with a pungent odour. Metting point. 56°C. Reacts with relating the color and consiste gas appeared as white funes. Reacts volently with measured as white funes. Reacts volently with organic materials (such as appeared as white funes. Reacts volently with organic materials (such as appeared as of control as a fune or for the property of the color and color and color and in the presence of mosture, highly consistent or consistent and fulled feature burst point. | Colourless liquid with a pungent odour Reacts with water, evolving through organization for corsine gas apparent as white furnes. When movided in a fire, evolves highly out clumes. Consistent of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the co | Colourless crystals or white deliques cent prowder. Melting point: 23°C,<br>reads with water, evolving heat and a normal temperatures prosphoric<br>acid, but at higher temperatures phosphine, a highly rox cg sa. In the<br>servere of moleculae, corrosive or most metals. Causes burns to skin,<br>eyes and muccos membranes. | Colourless, deliquescent crystals, turning dark on exposure to light: Soluble in water. Decomposes when heard and when involved in as Soluble in water as as trong base evolving flighty toxic nitrous times. The solution invater is as strong base and its lighty concerne. Reacts violently with acids. Intriating to skin, eyes and mucous methorares. | Colourless to yellowish liquid. Highly corrosive to most metals. Vapour highly irritating to skin, eyes and mucous membranes. Liquid causes severe burns to skin, eyes and mucous membranes. | Colourless to yellowish liquid. Highly corrosive to most metals. Vapour highly irritating to skin, eyes and mucous membranes. Liquid causes severe burns to skin, eyes and mucous membranes. | Colourles to light brown liquid. Highly corrosive to most metals. | When involved in a fire, evolve highly toxic gases, Corrosive to most metals, especially in the presence of moisture. Cause burns to skin, eyes and muccous membranes. | Liquids usually with a pungent odour. When involved in a fire, evolve highly toxic gases. Highly corrosive to most metals, Cause burns to skin, eyes and nuccous membranes. |

|               | Properties and Observations (17) |                | Crystalline soilds. When involved in a fire, evolve highly toxic gases. In the presence of moisture, corrosive to most metals. Cause burns to skin, eyes and mucous membranes. | Liquids usually with a pungent odour. When involved in a fire, evolve highly toxic gases. Corrosive to most metals. Cause burns to skin, eyes and mucous membranes. | Yellow crystals with an irritating and penetrating odour resembling that of chlorine. Slightly soluble in warer. Toxic if swallowed, by skin contact or by dust inhalation. | Solid pesticides present a very wide range of toxic hazard. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                                      | See entry above.                                      | Flammable liquid. Flashpoint: 50°C c.c., Immiscible with water. Toxic if swallowed, by skin contact or by inhalation. | Mineral fibres of varying length. Non-combustible, inhalation of the dust of sistents fibres; a failagenus and therefore exposure should be avoided at all times. Amays prevent the generation of substitutes floating the avoided at all times. | MSC90/28Add.3<br>ANNEX 4<br>Page 118   | Properties and Observations | (47)                   | Colouriess funing flammable liquid. Fashpoint: 59C c.c. The flashpoint will be lover when free ether is present. React to signously with oxidizing statistices. Decomposes in contact with water, evolving took, corros live and flammable vapous. Causes burs to skin, eyes and mucrous and flammable vapous. Causes burs to skin, eyes and mucrous difficulties. |                                       | Colouriess, flammable liquid with an ethereal odour immiscible with water. Flashpoint:-18C to 19C c.c. Highly toxic if swallowed, by skin contact or by inhalation. May cause blindness. | Colouries s liquid with a pungent odour. Flashpoint - 48°C o.c. Miscible with water. Harmful by inhalation. Irritating to skin, eyes and mucous membranes. | Colourless Itquids. Explosive limits.2.2% to 11%, 1-NITROPROPARE, list-proint approx. 33°C.c. 2-NITROPROPARE, flast-proint approx. 25°C.c. Partially miscile with water, Harmful by Imhalation. | Liquid. Hydrolyses in contact with water, forming allyl alcohol. Toxic if swallowed, by skin contact or by inhalation. | Colourless liquid with a fishy odour. Flashpoint: 39°C o.c. Corrosive when in contact with water. Harmful by inhalation. Causes burns to skin and eyes. Irritating to mucous membranes. | Colourless flammable liquid with a mild odour. Flashpoint: 51°C c.c. Miscible with water. Decomposes when heated, evolving highly toxic fumes. Toxic if swallowed, by skin contact or by inhalation. | Colourless, volatile liquid with an etheral odour. Flashpoint: below-18°C cc. Explosion limits: 28't o8oiling point: 39°C. Partially miscible with water. Narcotic, irritating to skin, eyes and mucous membranes. | Colouriess liquid with a pungent odour, Flashpoint: 34°C c.c.<br>Miscible with water, Irritating to skin, eyes and mucous membranes. | Colourless, volatile liquids. Flashpoint: below-18°C c.c.<br>Explosive limits: 1.7%-9.0%. Miscible with water. Irritating to skin, eyes<br>and mucous membranes. | Colourless liquid. Flashpoint: 17°C to 60°C c.c Reacts with water, evolving flammable vapours. | See entry above.        | Colourless, viscous liquid with a menthol-like odour.<br>Flashpoint: 58°C c.c. Partially miscible with water. | Colourless liquids. Flashpoint: 54°C to 60°C c.c. Explosive limits: 0.9% to 6.1%. Partially miscible with water. Harmful by inhalation. Irritating to skin, eyes and mucous membranes. |

| MSC 90/28 Add.3<br>ANNEX<br>Prov. 119  | Properties and Observations | (17)                 |                | Colouries, flammable liquid with an aromatic odour.<br>Flashpoint: S8°C c.c. Immiscible with water. Harmful if swallowed, by skin<br>contact or by inhalation. Corrosive to skin, eyes and mucous membranes. | Colourless liquids. Flashpoint: 52°C to 58°C c.c. Partially miscible with water. | Yellow liquid with a pleasant odour. Rashpoint: 44°C to 52°C c.c.<br>Miscible with water, Reacts vigorously with oxidizing substances. Irritating<br>to skin, eyes and mucous membranes. | Colourless liquid with a pungent odour. Flashpoint 31°C o.c.<br>Miscible with water. Toxic by inhalation. Irritating to skin, eyes and<br>mucous membranes. | A porous soild, e.g. cellular urea-formaldehyde resin, compacted wood shawings, ett., imprepated with flammable liquid, usually white spirit or kerosere, and designed to burn in a controlled manner. When heated, evolves flammable vapours. | White powder or crystals. Reacts with water or steam, evolving hydrogen, a flammable gas. In contact with acids, evolves silane, a spontaneously flammable gas. | Colourfes, Ilquid, May decompose, evolving chlorine and oxygen with<br>the corrective and oxidizing effects. May form explosive mixture with<br>ammonium compounds, combastible material or produced metals.<br>To consive to most metals. That post of ELOBIC LOLL AQUEDUS<br>SOLUTION with more than 10% chloric acid is porhibited. | Solids. Solid mixtures, with combustible material are readily ignited and may burn freetey, Solid mixtures with armanulum compounds or cyanides may explode. If hearde, may decompose, giving off toxic nitrous furnes. Harmful if swallowed, Transport of AMMOUIM MIXTURE 3 and mixtures of an inorganic intitie with an ammonium salt is prohibited. | Solidi. Soluble in water. Highly toxic if swallowed, by skin contact or by dust inhalation. | White powder, Soluble in water. Highly toxic if swallowed, by skin contact or by dust inhalation. | A wide range of toxic solids. Generally soluble in water. Highly toxic if swallowed, by skin contact or by dust inhalation. | Colouriess crystals. Melting point: 33°C. Soluble in water. Highly toxic if swallowed, by skin contact or by dust inhalation. | Colouriess to straw-coloured liquid. Slightly miscible with water. Causes tears. Toxic if swallowed, by skin contact or by inhalation. | Colouries liquid. Boiling point: 42°C to 43°C. Slightly miscible with water. When heated, evolves toxic furnes, Highly toxic if swallowed, by skin contact or by inhalation. Has strong narcotic effects. | White crystals changing to a greenish colour under the influence of light. Melting point, 50°C: insoluble in water. Causes tears. Toxic if swallowed, by skin contact or by inhalation. |

| MSC 90/28/Add.3<br>ANNEX 4<br>Page 120 | Properties and Observations (17)                   |                | Pale yellow I iquid with a pungent odour. Immiscible with water. Causes tears. Highly toxic if swallowed. by skin contact or by inhalation. | Colourless crystals. Melting point: 32°C. Soluble in water. When heated, evolves highly toxic cyanogen fumes. Toxic if swallowed, by skin contact or by dust inhalation. | Liquid. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation. Causes tears. | Crystals, Melting point: 45°C. Soluble in water. Decomposes when heated, evolving highly toxic fumes. Toxic if swallowed, by skin contact or by dust inhalation. Causes tears. | Liquid. Immiscible with water. May react vigorously with oxidizing substances. Decomposes when heated, evolving highly toxic furnes (oxides of nitrogen). Toxic if swallowed, by skin contact or by inhalation. | Tan-coloured flakes or lumps. Slightly soluble in water. Decomposes when heated, evolving highly toxic fumes. Toxic if swallowed, by skin contact or by dust inhalation. May be carried in the molten state. | Colourless crystals. Metting point, 24°C. Insoluble in water. Toxic if swallowed, by skin contact or by dust inhalation. Causes tears. | Solids which react with acids, evolving hydrogen fluoride and silicon tetrafluoride, irritating and corrosive gases. Toxic if swallowed, by skin contact or by dust inhalation. | Colourless liquid with a pungent odour. Immiscible with water. When heated, evolves highly toxic furnes (of oxides of nitrogen). Toxic if swallowed, by skin contact or by inhalation. | Bright red-yellow crystals with a faint odour. Insoluble in water. Toxic if swallowed, by skin contact or by inhalation. | White powder. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | Yellow to orange-red crystalline solids. Insoluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | Colourless to yellowish liquid. Slightly miscible with water. When heated, evolves extremely toxic furme (phosgene). Causes tears, Toxic if swallowed, by skin contact or by inhalation. | Clear, colourless liquid, Immiscible with water. Toxic if swallowed, by skin contact or by inhalation. | Colourles s liquids. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation. |

| MSC 90/28/Add.3<br>ANNEX 4<br>Page 121 | Properties and Observations (17) |          | Colouriess flammable liquid with a pungent odour. Flashpoint: SEC C.C. furniscible with water. Decompose when header devolving lighty toxic furnes of c-pandies. React with steam and acids, e-oshing toxic and firmmable wapours. Highly toxic if swallowed, by Skin contact or by inhalation. | Solutions with a phenol–like odour. Slightly miscible with water. Decompose when heated, evolving extremely toxic fumes (phosgene). Toxic if swallowed, by skin contact or by inhalation. | See entry above.                                       | Colouriess crystals with a purgent odour. Reacts with water, forming toxic and corrosive adds. Decomposes when hated, evolving toxic and corrosive gases. Causes burns to skin, eyes and mucous membranes. | White powder or crystals. Metting points: S8T to 64°C. Soluble in water. Reacts violently with acids. Toxic if swallowed, by skin contact or by dust inhalation. | Colourless liquid with a pungent odour. Corrosive to copper, nickel, zinc and tin mad their alloss such as brass. Not significantly corrosive to from and steel. Reacts violently with adds. Liquid and vapour cause burns to skin, eyes and mucous membranes. | Light brown crystals, Silghtly soluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | . Solids which react with acids, evolving hydrogen fluoride and silicon tetraluoride, irritating and corrosive gases. Toxic if swallowed, by skin contact or by dust inhalation. | i. Flammable, roxic, colourless gas with a foul odour. Decomposes violently in the presence of water. Much heavier than air (4.3). | Liquid, Reacts violently with acids. Reacts with ammonium salts, evolving ammonia gas. Corrosive to aluminium, zinc and tin. Causes burns to skin, eyes and mucous membranes. | See entry above.                                                      | Greyish-white solid, very hygroscopic. Reacts voleintly with acids. Reacts with amonium sides, evolving armonia gas. In the presence of moisure, corrosive to alumium, zinc and tin. Causes burns to skin, eyes and mucous membranes. | Colouriess liquid. Reacts violently with acids. Reacts with ammonium salts, evolving ammonia gas. Corrosive to aluminium, zinc and tin. Causes burns to skin, eyes and mucous membranes. | See entry above.                                                      | . Colourless crystals. Soluble in water. Reacts violently with acids. Causes burns to skin, eyes and mucous membranes. | Colourless liquid. Reacts violently with acids. Reacts with anmonium salts, evolving ammonia gas. Corrosive to glass, aluminium, zinc and tin. Causes burns to skin, eyes and mucous membranes. |

| MSC 90/28/Add.3<br>ANNEX 4<br>Page 122 | Properfies and Observations (17)                  |            | See entry above.                                                      | Colourless or yellowish hygroscopic crystals. Reacts violently with acids. Reacts with ammonitum salls, evolving ammonia gas. in the presence of mosture, corroste to glass, alluminium, zinc and tin. Causes burns to skin, eyes and mucous membranes. | Yellow liquid with a foul odour fof rotten eggs). When heated, evolves can diamented, evolves when the candis, evolving hydroges and supplied a toxic and flammable gas. Toxic if swallowed, by skin contact or by inhalation. Corrosive to skin, eyes and mucous membanes. | Colouriess liquid with a fishy odour. Flashpoint: 59°C o.c. Miscible with water. Irritating to skin, eyes and mucous membranes. | Colouries, flammable liquid with a fishy odour. Flashpoint: 46°C o.c.<br>Miscible with water. Harmful by skin contact. Fritating to eyes and<br>mucous membranes. | Colourless liquid. Miscible with water. Reacts violently with oxidizing substances. Explosive limits: 1.8% to 28%. Elabylonit. 46°C to 60°C c.c. Causes burns to skin, eyes and mucous membranes. | White powder. Insoluble in water. Harmful if swallowed. | Colourless liquid. Immiscible with water. Decomposes when heated, evolving highly toxic fumes. Toxic if swallowed, by skin contact or by inhalation. | Colourless Ilquid. Miscible with water. Toxic if swallowed, by skin contact or by inhalation. | Colouriess to amber mobile liquid. Miscible with water. Toxic if swallowed, by skin contact or by inhalation. | and be who prospectory corptals, evoluting frumes in the size which are consistent and between them air. Reacts volently with nature resolution bytes deacts beneat beneath and mortised as apparent as swhelfer times. Reacts volently with ammonit, bases and may other substances and may cause the entire structure of the standard solution. The standard solution is and explosion. The standard solution should be supported and toxic gases, in the Decemposes when he heard, evolving corneave and toxic gases, in the standard solution is allowed to most metals. Causes burns to skin, eyes and mucosis membranes. | Colourless fuming liquid. Reacts violently with water, evolving toxic and corrosse furnes. Decomposes when headed, evolving toxic fumes, in the presence of moisture, highly corrosive to most metals. Iquid and vapour cause severe burns to skin, eyes and mucous membranes. | Category A. Clear of living quarters. Liquid with a pungent odour. Reacts with acids, evolving sulphur dioxide,<br>Separated from" acids. | White crystalline powders. React with water, evolving heat and forming tetraholopthikal cell. Cause burns to skin, eyes and mucous membranes. When heated, evolve acrid fumes which are irritating to skin, eyes and mucous membranes. | debugges, and any approacy funded with a purgent doubt. | MSC 90/28/Add.3<br>ANNEX 4<br>Page 123 | Properties and Observations | (7)                    | Colourless liquid with a perceptible odour. May react in contact with acids and alkalis. Causes burns to skin, eyes and mucous membranes. | Colourless liquids with a pungent odour. Partially miscible with water. React vigorously with oxidizing substances. Harmful by inhalation. Irritating to skin, eyes and mucous membranes. | See епту above.       | Colourless liquids with an unpleasant odour.<br>Has piont: 34°C to 60°C cc. Explosive limits 0.7% to 6.9%, immiscible<br>with water. Irritating to skin, eyes and mucous membranes. | Colourless liquid. Flashpoint: 49°C c.c. Immiscible with water. | Small colourless to yellowish crystals or needles. Sublimes at 100°C.<br>Practically insoluble in water. Toxic if swallowed, by skin contact or by<br>inhalation. | Powder or clear amber lumps. Insoluble in water. Liable to spontaneous heating. Irritating to skin and mucous membranes. | Cream to brown coloured mass. Insoluble in water. Liable to spontaneous heating. Irritating to skin and mucous membranes. | Category A. "Separated from" acids, White crystals, Melting point: S87C. Soluble in water. Forms explosive alkalis and mercury salts. Strong acids, alkaline compounds and halides. Toxic if swallowed, by skin contact or by inhalation. | Colourless or white crystals, granules or easily broken masses with a penetrating, pungent and aromatic odour. Slightly soluble in water. When heated, evolves flammable and explosive vapours. Harmful if swallowed. | White crystals or powder. Slightly soluble in water. Reacts vigorously with Maydrur acid, Reacts fretely with capadies when thered or by friction. May form reclosive mixtures with combustible material, powdered measures or ammonium compounds. These mixtures are sensitive to friction and a tailed to guildre. When involved in a fire may cause an explosion. Toxic if swallowed, by skin contact or by dust inhalation. | Purple crystals. Mixtures with combustible material are readily ignited and may burn flercely. Solutions in water are slightly corrosive. Harmful if swallowed. | Bue-green deliquescent crystals or powder. Soluble in water. Reacts by organization or the state of prioristic water that can be supported by the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the st | Colourless deliquescent crystals. Soluble in water. Mixtures with combustible material are readily ignited and burn fercely. Harmful if swallowed. |

| Properties and Observations | (47)                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | White defiquescent crystals or powder. Soluble in water. Metling point: 355.00 acts vigorouple with students of earst forces, with completes when heated or by friction. May form explosive missures with compassible metals to owner demand in compounding compounding. These missures with compassible activities as a sensitive to friction and are failable to ignite. When involved in a fire may cause an explosion. The cargos subjudit by protected from missure prior to and after loading. Weather is inclinement, hatches should be closed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Pale pink deliquescent crystals. Soluble in water. Melting point between 26°C and 35°C. Mixtures with combustible material are readily ignited and may burn flercely. Solutions in water are slightly corrosive. Harmful if swallowed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Green deliquescent crystals. Soluble in water. Melting point. 55°C. Mixures with combustible material are readily ignited and may burn flercely. Solutions in water are slightly corrosive. Harmful if swallowed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Reddish-yellow crystals. Decomposes if heated, giving off toxic nitrous funes. As Muxtures with combustible material are readily ignited and may burn flectely. Mixtures with ammonium compounds or cyanides may explode. Harmful if swallowed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Colourless crystals. Soluble in water. Mixtures with combustible material are readily ignited and may burn flercely. Toxic if swallowed, by skin contact or by dust inhalation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | White crystals, flakes or powder. Soluble in water. Solutions in water are slightly corrosive. Harmful if swallowed. | White needle-like crystals, insoluble in water. Decomposes when heated, evolving highly toxic fumes. Toxic if swallowed, by skin contact or by dust inhaliation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Light reddish or amber liquid. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation. | Colouriess to pale yellow liquids. Meting point of 1-BROMO-3-<br>NITROBENZENE: 17C. Immiscible with water. Toxic if swallowed, by skin<br>contact or by inhalation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Colouriess to yellowish liquids with an unpleasant odour. Some are very volatile. Mischle vivil water. Corrost ver noast media, especially otoper and its alloys. When involved in a fire, evolve toxic gases. React volently with acids. Harmful by inhalation. Cause burns to skin, eyes and mucoso membranes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | s. | MSC 90/28/Add.3<br>ANNEX 4<br>Page 125 | Properties and Observations |          | Colourless to yellowish liquids or solutions with a pungent odour. Miscible with or solution to solution in water. When involved in a fire, evolve toxic gass. Corrosive to most metals, especially to copper and its alloys. Reads volvently with a fids. Cause burns to skin, eyes and mucous membranes. | . See entry above.                                                            | . See entry above.                                                                 | Amber liquid with a perceptible odour, immiscible with water. May react vigorously with oxidizing substances. Toxic if swallowed, by skin contact or by inhalation. | Colouriess liquid. Decomposes in water to form butyric acid. | Colourless flammable liquid. Flashpoint: 28°C.c.C. Decomposed by water, generating propyl alcohol. Highly toxicif swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes. | White powder with pungent odour. Reacts with acids, evolving chlorine, an immining, cronsive and root org as faces thereby with regardise when heated or by friction, May form explosive mixtures with combostible metals, powdered metals or ammonium compounds. These mixtures are sensitive to infection and are lable to gaite, when involved. The stiff me may care are applicable. To secif it walking by stiff not control inflation. Districtinates mucous membranes. Contact with eyes will cause concess injury or the corne all fulled membranes. Contact with eyes will cause copious amounts of water followed by medical attention. | due craoq et colorier sto vellorier flammble liquids. React and decempose with water or heat, reading photogen chiender, an il ritating and corronse as a papearier as white furnes, Elashponte, an littlating cyclebray Choleroformate. 32T c.c. Toxic II swallowed, by skin corner to by inhalation. Cause burns to skin, eyes and muccus membranes. | where nanger of controllers to wellowings flammable liquids. React and decompose with water or heat, evolving hydrogen chiendie, an irritating off and orrorise as a papearent as white furnes. Flashpoint: 32°C cc. 10 90°C cc. Toxic if swallowed, by Skin contact or by inhalation. Cause burns to skin, eyes and mucous membranes. | where raped of colories to vellocine flammble lights. React and decompose with water or heat, reolving perforged chiendle, and rittating decompose with water or heat, reolving perforged chiendle, as in fittating of encompass apparent as white furnes. Flashpoint; 38°C c.C.; Toxic if swallowed, by skin contact or by inhalation, Cause burns to skin, eyes and mucous membranes. | A wide range of colourless to yellowish liquids. React and decompose with water or heat, evolving hydrogen chloride, an intribat and corrosive gas appearent as white fumes. Toxic if wallowed, by shin contact or by inhalation. Cause burns to skin, eyes and muccous membranes. | A wide range of colourless to yellowish liquids. React and decompose with water of heize, evolving phycogen chloride, an intritating and corrosive gas apparent as white furnes. Toxic if swallowed, by skin contact or by inhalation. Cause burns to skin, eyes and mucous membranes. | Colourless to yellowish liquid, Reacts with water or decomposes if heated, evolving hydrogen chloride, an irritating and corrosive gas apparent as white furnes. Toxic if swallowed, by skin contact or by inhalation. |

| MSC 90/28/Add 3<br>ANNEX 4<br>Fage 120 | Properties and Observations | (17)                 |                | A wide range of colourless to yellowish liquids.  Cast and decompose with water neat, evolving hydrogen chloride, an irritating and corrosive gas apparent as white turnes. Toxic it swallowed, a byte normat or by inhalation. Cause burns to skin, eyes and mucous membranes. | Colouriess, volatile liquid. Flashpoint: below-18°C cc. Bolling point: 2.7°C.<br>Immiscible with water. Harmful if swallowed or by Inhalation. Irritating to<br>skin, eyes and mucous membranes. | Colourless, slightly viscous liquid with a chloroform-like odour,<br>Immiscible with water, Decomposes when heated, evolving extremely<br>toxic furmes (phosgene). Toxic if swallowed, by skin contact or by<br>inhalation. | Colourfess liquid with a perceptible odour. Reacts slowly with water, friends glyderforca dad, When moveded in a fire goodwest rook gases (Mydrogen chloride and sulphur dioxide), Napour highly irritating to eyes and mucous membranes. Uquid causes burns to skin, eyes and mucous membranes. | Immiscible with water. Flashpoint: 47C c.c. irritating to skin, eyes and mucous membranes. | Liquids with a strong odour. Immiscible with water. Toxicif swallowed, by skin contact or by inhalation. | Colourless to light amber flammable liquids. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation. | Category A. Clear of Iiving quarters. Solid pesticides present a very wide range of toxic hazard. Toxic if swallowed, by skin contact or by inhalation. | . See entry above.                                     | . See entry above.                                    | Pesticides frequently contain petroleum or coal rar distillates, or other flammable liquids. Miscibility with water depends upon the composition. Took if swallowed, by skin contact or by Inhalation. | See entry above.                                                                | Category A. Clear of I lving quarters. Solid pesticless present a verywide range of toxic hazard. Toxic if swallowed, by skin contact of by inhaltation. | . See entry above.                     | . See entry above.                                              |

| MSC90/2N/MG 2ANNEX 4 ZANNEX 4 | Properties and Observations   |         | Colouriess liquid with an extremely foul and persistent odour. Miscible with water. Decomposes rapidly in contact with acids and bases. Toxic if swallowed, by skin contact or by Inhalation. | Solid pesticides present a very wide range of toxic hazard. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                                       | See entry above.                                       | Pesticides frequently contain petroleum or coal tar distillates, or other flammable liquids, Miscibility with water depends upon the composition. Took if swallowed, by skin contact or by inhalation. | See entry above.                                                                 | A wide variety of toxic liquids. Toxic if swallowed, by skin contact or by inhalation. | See entry above.                                       | See entry above.                                       | Colourless flammable liquid with a pungent odour. When pure, crystallizes below 16°C. Flashpoint 40°C.c (pure product) 60°C.c. (80% solution) Explosive limits: 4% to 17%. Miscible with water. Corrosive to lead and most other metals. Corrosive to skin, eyes and mucous membranes. | Colourless liquid with a pungent odour. Miscible with water.<br>Corrosive to lead and most other metals. Corrosive to skin, eyes and<br>mucous membranes. | See entry above.                                                                 | These cargoes are liable to self-healing and to ignite spontaneously, materialist when in finely binded from, were conseminated with such materials as usualized carding oil. (ii) in say and other cimbuschile materials are usualized carding oil. (iii) in say and other cimbuschile materials are usualized states and other cimbuschile carding the strong states. Excess are more to set into beings or organic materials may encourage leading. The swaf should be wastered from monisture prior to and after loading. If during loading, the weather is inclement, hatches should be closed or otherwise protected to |

Causes burns to skin, eyes and mucous membranes. | Reacts violently with acids. Reacts with ammonium salts, evolving ammonia gas. Corrosive to aluminium, zinc and tin. | Colouriess liquid. Hydrolyses in water, Fumes in air, Causes burns to skin, eyes and mucous membranes. | Colourless liquid which fumes slightly in air. Reacts with water or steam, evolving toxic and flammable vapours. Causes burns to skin, eyes and mucous membranes. | Metal plates immersed in gelied alkaline or acid electrolyte in a glass, hard rubber or plastics recepted of a non-spillable type. When electrically charged, may cause frie through short-circuiting of terminals. Cause burns to skin, eyes and mucous membranes. | A wide range of corrosive liquids. Causes burns to skin, eyes and mucous membranes.   | See entry above.                                                                   | See entry above.                                                                   | White to yellow-brown crystals or powder. Partially to fully soluble in water. Corrosive to steel. Causes burns to skin, eyes and mucous membranes. | Place-whole medical element that mode as 25°C, place-whole medical elements and the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the place of the | White, crystalline mass. Reacts with water, moisture or acids, evolving hydrogen which may be ignited by the heat of the reaction. | Brownish-red crystals or fine, free-flowing powder. Reacts slowly with water to form lithium hydroxide and ammonia. |
| Shware and Senteralin                      | Stowage and Segregation (16)     | 7.1 to 7.7     | Category A. For unit loads in open cargo transport units, category B.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Category A. |     | Properties and Loservations (17) |            | See entry above.                          | Instable yellowish liquid with a foul odour (of rotten eggs), Miscible with western seats obligative with adds, expensions in contact with adds, evolving hydrogen sulphide, a toxic and flammable gas. Toxic if a toxic and flammable gas. Toxic if an one of the manable gas. Toxic if an one of the manable gas. Toxic if any other manable gas. Toxic if any other manable gas. Toxic if any other gas of the manable gas. Toxic if any other gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of the gas of | See entry above.                                                                                      | Clear colourless liquid. A mixture of primary and amyl isomers. Immiscible with water. Corrosive to skin, eyes and mucous membranes. | Colourless liquid with a penetrating and unpleasant odour. Freezing point—SC to-SC . Miscible with water. Corrosive to most metals. Harmful if swallowed or by inhalation. Corrosive to skin, eyes and mucous membranes. | Yellowish solutions with a perceptible odour. Toxic if swallowed, by skin contact or by inhalation. Rapidly absorbed through the skin. | See entry above.     | Colourless oily liquid. Slightly miscible with water. Toxic if swallowed, by skin contact or by inhalation. | White crystalline solid. Soluble in water, Decomposes when heated, evolving toxic fumes. Causes burns to skin, eyes and mucous membranes. | Colourless, flammable liquid. Flashpoint: 29°C c.c. Causes burns to skin, eyes and mucous membranes. | Oily, colourless or yellowish liquid. Mething point:-4°C. Partially miscible with water. Corrosive to mild steel. Causes burns to skin, eyes and mucous membranes. | Dark, crystaline, metal-like powder or britle lumps. In contact with moisture, evolves flammable and toxic gases.                    | Colourless liquid. Immiscible with water. Decomposes when heated, evolving lighty toxic furnes (phospere and hydrogen choride). Toxic if swellowed by skin contact or by inhalation. Narcotic in high concentrations. | Colouriess to yellow deliquescent crystals. Soluble in water. Mildly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. | White, crystalline solid.<br>Reacts with water, moisture or acids evolving hydrogen, which may be |

2840 2842 2849 MSC 90/28/Add.3 ANNEX 4 2837 2838 2839 2841 2844 2845 2846 2851 2853 Page 134 No. (18) 2854 Clear, colourless to yellow viscous liquid. Miscible with water. Decomposes at 85°C, evolving toxic fumes. May react vigorously with oxidizing substances. Toxic if swallowed, by skin contact or by inhalation. Colourles s liquid with an ammoniacal odour. Flashpoint: 52°C c.c. Slightly miscible with water. Toxic if swallowed, by skin contact or by inhalation. Colourles s, non-fuming liquid. Boiling range: 58°C to 60°C. Reacts with water, evolving corrosive and toxic fumes. Corrosive to mild steel. Causes burns to skin, eyes and mucous membranes. Colourless liquid. Immiscible with water. Flashpoint: 58°C c.c. Harmful by inhalation. Irritating to skin, eyes and mucous membranes. Desensitized explosive. Colden-yellow, crystalline leaflets. Explosive and sensitive to shock and heat in the dry state. May form extremely sensitive compounds with heavy metals or their salts. Colourless to white liquid. Miscible with water. Corrosive to most metals. Causes burns to skin, eyes and mucous membranes. In contact with water, evolves hydrogen, a flammable gas. In contact with acid, evolves silane, a spontaneously flammable gas. Colourless to light-yellow liquid. Miscible with water. Mildly corrosive to steel. Toxic if swallowed, by skin contact or by inhalation. Colourless, oily liquid. Flashpoint: 28°C c.c. Explosive limits: 3.4% to ... When Involved in a fire, evolves nitrous toxic fumes. Slightly soluble in water. Irritating to skin, eyes and mucous membranes. Solids which react with acids, evolving hydrogen fluoride and silicon tetrafluoride, irritation and corrosive gases. Toxic if swallowed, by skin chattact or by dust inhalation. Colourless liquid with a pungent odour. Flashpoint: 12°C c.c. Explosive limits: 1.4% to 8.8%. Immiscible with water. Irritating to skin, eyes and mucous membranes. Liable to ignite spontaneously in air. If shaken, may produce sparks. In contact with water, evolve hydrogen, a flammable gas. Solids which react with acids, evolving hydrogen fluoride and silicon tetrafluoride, irritating and corrosive gases. Toxic if swallowed, by skin contact or by dust inhalation. Highly flammable liquids, may ignite spontaneously in moist air. In contact with air, evolve irritating and slightly toxic fumes. Colourless liguid. Immiscible with water. Irritating to skin, eyes and mucous membranes. Properties and Observations See entry above Category A. "Separated from" acids. Category A. "Separated from" acids. Category A. Only to be loaded under dry weather conditions. Under deck in a mechanically ventilated space. "Separated from" Category D. "Away from" class 3 and heavy metals and their salts. Category D. Separated longitudinally by an intervening complete compartment or hold from Class 1. Category B. Keep as cool as reasonably practicable. Clear of living quarters. Stowage and Segregation Category A. Keep as cool as reasonably practicable. 7.1 to 7.7 (16) Category D. Category A. Category A. Category B. Category A. Category A. Category A. Category A. Category A. | MSC 90/28/Add.3<br>ANNEX 4<br>Page 136 | Properties and Observations (17) |           | See entry above.           | Colouriess liquid with a perceptible colour. Miscible with water. Toxic if swallowed, by skin contact or by inhalation. | Clear, colouriess, mobile liquid, becoming brown to dark-red upon exposure to light and air. Misciple with water, Reacts explosively with oxidizing substances. Toxic if swallowed, by skin contact or by inhalation. | White, odourless powder or crystals, insoluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | White to pink crystals. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation. | Silvery grey granules or dark grey, amorphous powder. May react with carbon dioxide, evolving oxygen. Forms explosive mixtures with oxidizing substances. | Colourless, yellowish liquid, Reacts violently with water, evolving thoughood colourless as irritating and protected supperent as white furnes, in the presence of mosture, lighly corrosive to most metals. Toxic stacks of the presence of mosture, lighly corrosive to most metals. Toxic State, eyes and muctous membranes. | White or yellowish solid (powder, granules or tablets) with chlorine-like and our Soluble in were May cause fine in constact with organic material or ammonium compounds.  Statusticas are like to esochemic decomposition at elevated to strangers. This condition may lead to fire or explication at elevated temperatures. This condition may lead to fire or explication. Decomposition can be initiated by that of by impurities (e.g., powdered metals (fron, manganese, colait, magnesium) and their compounds).  Reads with adds, evolving chlorine, an irritating, corrosive and toxic gas. In the presence of most turne, corrosive to most metals. Dust irritates mucons membranes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | See entry above.                                                                                                                                                                                                              | Liable to ignite spontaneously in air. | See entry above          | See entry above.         | Substances which are dangerous to animals only. For action to be taken in the event of damage to, leaking from , package containing infectious substances, refer to [7.8.3.] |

| MSC 90/28/Add.3<br>ANNIK 4<br>Page 137 | Properties and Observations |            | Reddish-yellow non-flammable, toxic and corrosive gas. When heated to decomposition, entits highly toxic and corrosive furnes of bromine and chlorine. Reacts with water, evolving poxicl and corrosive furnes. Powerful oxidizing agent which may cause violent fires with combustibles materials, much heavier than air. Highly irritating to skin, eyes and mucous membranes. | Liquid pesticides which present a very wide range of roxic hazard. Miscibility with water depends upon the composition. Toxic if swallowed, by skin contact or by imhalation. | See entry above.                                       | See entry above.                                      | Liquid flammable pesticides having a flashpoint between 23°C and 60°C core, presenting a very voide range to prost hazard. The frequenty contain percideum or coal tradistillates, or other flammable ilquids, lashpoint manier some other mammable ilquids, showing the system of macking when when depend upon the composition. Toxicif it swallowed, by skin contact or by inhalation. | See entry above.                                                                 | See entry above.                                                               | A wide range of corrosive liquids, Cause burns to skin, eyes and mucous membranes. | A wide range of corrosive solids. Soluble in water. Cause burns to skin, eyes and mucous membranes. | Desensitized explosive. Pure isosorbide dinitrate is explosive. May form extremely sensitive compounds with heavy metals or their salts. | See 1.5.1 and 5.1.5.4.2.                                    | See 1.5.1 and 5.1.5.4.2.                                                                                                         | See 1.5.1 and 5.1.5.4.2.                                                   | See 1.5.1 and 5.1.5.4.2.                                              |
